ACE

- ^{*1} Operating condition of peak current : Peak current is less than 10sec., duty is less than 35% and average current is less than rated current. (rated current2 at Module W, Z, 9, Q and V)
- ^{*2} Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN : RM101). Ripple and Ripple Noise is measured by using measuring board with capacitor of 22 μ F within 150mm from output terminal.
- ^{*3} Drift is changed in DC output for an eight hour period after half-hour warm-up at 25°C, with the input voltage held constant at the rated input/output.
- ^{*4} When the output voltage of module A is used less than 2.0V, keep minimum output current 2.6A.
- ^{*5} It is a value from 0 to rated output current1. The current on non-measurement side is fixed.
- ^{*6} It is a value from 0 to rated output current2. The current on non-measurement side is fixed.
- ^{*7} The sum of +power and -power must be less than output power(Y:50W, W:76.8W, Z:75W, 9:76.8W, Q:153.6W, V:165W).

- ^{*8} Ratings of V2 can draw up to 50% of rated current at the time of 0A in load of V1. (Only module S,T,U. refer to instruction manual 4.2 for details.)
- ★ Each output of module Y-Z, 9, Q and V is a ground common type (not isolated), each output of module S, T and U is isolated.
- ★ For ACE300F, 450F and 650F, input and output terminals can be set at the same side if Input module (code:I) is installed instead of the most left module.
- ★ Modules which can correspond to medical electrical equipment (UL2601-1, EN60601-1) are all modules except module S, T and U. Refer to instruction manual 7. for details.
