Dual, Precision JFET Input Op Amp

FEATURES

- **Handles 10,000pF Capacitive Load**
- 450µV Max Offset Voltage
- 1200µV Max Offset Voltage in S8 Package
- **50pA Bias Current at 70°C**
- 13nV/√Hz Voltage Noise
- 4V/µs Slew Rate
- 4µV/°C Drift
- 130dB Channel Separation

APPLICATIONS

- Sample-and-Hold (Drives Large Hold Capacitors)
- A/D and D/A Converters
- Photodiode Amplifiers
- Voltage-to-Frequency Converters

DESCRIPTION

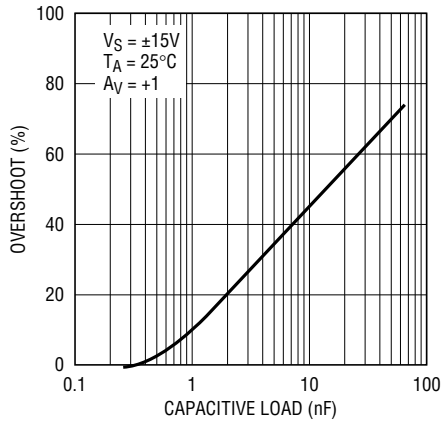
The LT1457 is a dual, JFET input op amp optimized for handling large capacitive loads in combination with precision performance.

Precision specifications include 220µV offset voltage in plastic and surface mount packages. At 70°C input bias current is 50pA, input offset current is 20pA. Channel separation is 130dB.

Other dual JFET input op amps from Linear Technology include the LT1057, which is three times faster than the LT1457 but at the expense of significantly lower capacitive load handling capability; and the LT1113 with 4.5nV/√Hz voltage noise.

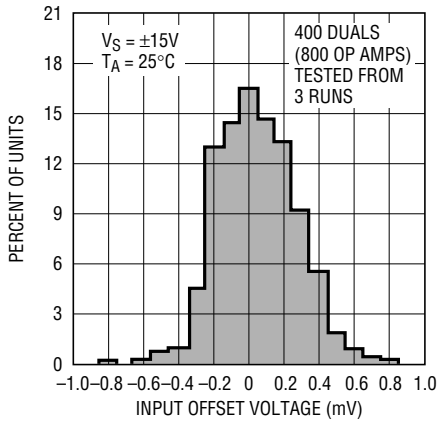
TYPICAL PERFORMANCE CHARACTERISTICS

Capacitive Load Handling



LT11457• TA01

Input Offset Voltage Distribution S8 Package

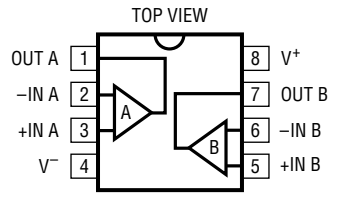


LT1457 • TA02

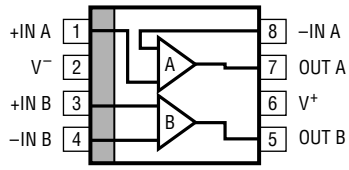
ABSOLUTE MAXIMUM RATINGS

Supply Voltage ..... ±20V
Differential Input Voltage ..... ±40V
Input Voltage ..... Equal to Supply Voltages
Output Short-Circuit Duration ..... Indefinite
Operating Temperature Range ..... –40°C to 85°C
Storage Temperature Range ..... –65°C to 150°C
Lead Temperature (Soldering, 10 sec)..... 300°C

PACKAGE/ORDER INFORMATION



N8 PACKAGE
8-LEAD PLASTIC DIP
T_{JMAX} = 115°C, θ_{JA} = 130°C/W



S8 PACKAGE
8-LEAD PLASTIC SOIC

NOTE: THIS PIN CONFIGURATION DIFFERS FROM THE 8-LEAD DIP PIN LOCATIONS. INSTEAD, IT FOLLOWS THE INDUSTRY STANDARD LT1013DS8 SO PACKAGE CONFIGURATION.

T_{JMAX} = 130°C, θ_{JA} = 190°C/W

ORDER PART NUMBER
LT1457ACN8 LT1457CN8

The ● denotes the specifications which apply over the full operating temperature range.

Note 1: Typical parameters are defined as the 60% yield of distributions of individual amplifiers; i.e., out of 100 LT1457s (200 op amps) typically 120 will be better than the indicated specification.

Note 2: This parameter is tested on a sample basis only.

Note 3: Current noise is calculated from the formula: $i_n = (2qI_b)^{1/2}$, where $q = 1.6 \times 10^{-19}$ coulomb. The noise of source resistors up to 1GΩ swamps the contribution of current noise.

Note 4: This parameter is not 100% tested.

Note 5: Gain-Bandwidth product is not tested. It is guaranteed by design and by inference from the slew rate measurement.

Note 6: The LT1457 is not tested and not quality-assurance-sampled at –40°C and at 85°C. These specifications are guaranteed by design, correlation, and/or inference from 0°C, 25°C, and 70°C tests.

APPLICATIONS INFORMATION

Phase Reversal Protection

Most industry standard JFET input single, dual, and quad op amps (e.g., LF156, LF351, LF353, LF411, LF412, OP-15, OP-16, OP-215, and TL084) exhibit phase reversal at the output when the negative common-mode limit at the input is exceeded (i.e., below –12V with ±15V supplies). The photos show a ±16V sine wave input (A), the response of an LF412A in the unity gain follower mode (B), and the response of the LT1457 (C).

The phase reversal of photo (B) can cause lock-up in servo systems. The LT1457 does not phase-reverse due to a unique phase reversal protection circuit.

APPLICATIONS INFORMATION

High Speed Operation

When the feedback around the op amp is resisitive (R_F), a pole will be created with R_F, the source resistance and capacitance (R_S, C_S), and the amplifier input capacitance ($C_{IN} \approx 4pF$). In low closed loop gain configurations and with R_S and R_F in the kilohm range, this pole can create excess phase shift and even oscillation on high speed amplifiers. Because the LT1457's phase margin is very high, this problem is minimal. However, a small capacitor (C_F) in parallel with R_F eliminates this problem. With $R_S(C_S + C_{IN}) = R_FC_F$, the effect of the feedback pole is completely removed.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits,General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
