\*1 This is the value that measured on measuring board with capacitor of 22 μF at 150mm from output terminal.  
Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN: RM-103).

\*2 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25°C, with the input voltage held constant at the rated input/output.

\*3 Peak loading for 10sec. And Duty 35% max. or less is acceptable if the total wattage is less than the rated wattage (24V:60W).  
Refer to instruction Manual 5. In detail.

\*4 Only output 24V and 48V DC models are applied that the upper temperature limit is 45°C.

- \* Avoid prolonged use under over - load.
- \* Parallel operation with other model is not possible.
- \* Derating is required when operated with chassis and cover.
- \* A sound may occur from power supply at pulse loading.

- ※ This power supply is manufactured by SMD technology. The stress to P.C.B like twisting or bending causes the defect of the unit, so handle the unit with care. Take care for SMD parts on the back to come in contact because of the vibration and not to break down.
- ※ Use the spacer of 8mm length or more.
- ※ 4 Mounting holes are existing.

\*1 This is the value that measured on measuring board with capacitor of 22  $\mu$ F at 150mm from output terminal.

Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN: RM-103).

\*2 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25°C, with the input voltage held constant at the rated input/output.

\*3 Peak loading for 10sec. And Duty 35% max. or less is acceptable if the total wattage is less than the rated wattage.

Refer to instruction Manual 5. In detail.

\* Avoid prolonged use under over - load.

\* Parallel operation with other model is not possible.

\* Derating is required when operated with chassis and cover.

\* A sound may occur from power supply at pulse loading.

※ This power supply is manufactured by SMD technology. The stress to P.C.B like twisting or bending causes the defect of the unit, so handle the unit with care. Take care for SMD parts on the back to come in contact because of the vibration and not to break down.

※ Use the spacer of 8mm length or more.

※ 4 Mounting holes are existing.

\*1 This is the value that measured on measuring board with capacitor of 22 μF at 150mm from output terminal.

Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN: RM-103).

\*2 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25℃, with the input voltage held constant at the rated input/output.

\*3 Peak loading for 10sec. And Duty 35% max or less is acceptable if the total wattage is less than the rated wattage.

Refer to instruction Manual 5. In detail.

\* Avoid prolonged use under over - load.

\* Parallel operation with other model is not possible.

\* Derating is required when operated with chassis and cover.

\* A sound may occur from power supply at pulse loading.

※ This power supply is manufactured by SMD technology.  
The stress to P.C.B like twisting or bending causes the defect of the unit, so handle the unit with care.  
Take care for SMD parts on the back to come in contact because of the vibration and not to break down.

※ Use the spacer of 8mm length or more.

※ 4 Mounting holes are existing.

\*1 This is the value that measured on measuring board with capacitor of 22 μF at 150mm from output terminal.

Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN: RM-103).

\*2 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25℃, with the input voltage held constant at the rated input/output.

\*3 Peak loading for 10sec. And Duty 35% max or less is acceptable if the total wattage is less than the rated wattage.

Refer to instruction Manual 5. In detail.

\* Avoid prolonged use under over - load.

\* Parallel operation with other model is not possible.

\* Derating is required when operated with chassis and cover.

\* A sound may occur from power supply at pulse loading.

- ※ This power supply is manufactured by SMD technology. The stress to P.C.B like twisting or bending causes the defect of the unit, so handle the unit with care. Take care for SMD parts on the back to come in contact because of the vibration and not to break down.
- ※ Use the spacer of 8mm length or more.
- ※ 4 Mounting holes are existing.

Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN: RM-103).

\*2 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25℃, with the input voltage held constant at the rated input/output.

\*3 Peak loading for 10sec.And Duty 35% max.or less is acceptable if the total wattage is less than the rated wattage.

Refer to instruction Manual 5. In detail.

\* Avoid prolonged use under over - load.

\* Parallel operation with other model is not possible.

\* Derating is required when operated with chassis and cover.

\* A sound may occur from power supply at pulse loading.

※ This power supply is manufactured by SMD technology.

The stress to P.C.B like twisting or bending causes the defect of the unit, so handle the unit with care.

Take care for SMD parts on the back to come in contact because of the vibration and not to break down.

※ Use the spacer of 8mm length or more.

※ 5 Mounting holes are existing.
