An ON Semiconductor Company

Bi-CMOS IC

## **LV7109E — AC Switch Europe SCART Standard**

### **Overview**

The LV7109E is a rationalized IC of AC switch LV7108 complying with the Europe SCART standard.

### **Features and functions**

- Video/Audio Canal-SW
- 6dB-VideoAmp
- 6MHz/12MHz/27MHz-LowPassFilter
- 9ch VideoDriver (AV1/AV2/Line/RGB/Component)
- V-Sync. Detection
- 3ch Stereo Audio Input
- 2ch Stereo Audio Output

### **Specifications**

#### **Absolute Maximum Ratings at Ta = 25°C**

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage 1	V <sub>CC1</sub> max		6.0	V
Maximum supply voltage 2	V <sub>CC2</sub> max		13.0	V
Recommended supply voltage 1	V <sub>CC1</sub>		5.0	V
Recommended supply voltage 2	V <sub>CC2</sub>		12.0	V
Operating supply range 1	V <sub>CC1</sub> opg		4.5 to 5.3	V
Operating supply range 2	V <sub>CC2</sub> opg		11.1 to 12.5	V
Allowable power dissipation	P <sub>d</sub> max	* With specified substrate	1070	mW
Operating temperature	T <sub>op</sub> r		-20 to +75	°C
Storage temperature	T <sub>stg</sub>		-40 to +150	°C

\* With specified substrate : 76.1mm × 114.3mm × 1.6mm, glass epoxy.

- Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment. The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for new introduction or other application different from current conditions on the usage of automotive device, communication device, office equipment, industrial equipment etc. , please consult with us about usage condition (temperature, operation time etc.) prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.

■ Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

## Cautions for Use

### 1. Drive capacity of video driver

Line outputs can drive two systems through capacitive coupling.

Component outputs can drive one systems through capacitive coupling.

Scart output can drive one system only through DC coupling.

### 2. Audio Mute

This IC incorporates a mute transistor to reduce the POP noise of audio output when power is turned ON/OFF.

Mute control can be made by serial control.

### 3. Resistor to limit the Audio input

When the large signal is input in the input pin with power OFF, cross-talke between input and output occurs through the protective diode and parasitic elements. Because of the structure of LSI, such cross-talke is difficult to avoid.

If cross-talk at a time of power OFF presents a problem, the cross-talk amount can be reduced by inserting the limiting resistor in the input.

In this case, the input signal level changes depending on the resistance value. Determine the constant while taking both the cross-talk amount and input level into account.

### 4. Pin treatment when external control is not to be used

When external control pins (Pins 26) are not used, pull-down to GND is recommended.

### 5. Audio 9V\_REG pin external capacitance

Use the Audio 9V\_REG pins (pins 52 and 57) external capacitance of 10μF or more and with the equivalent series resistance component of 7Ω or less.

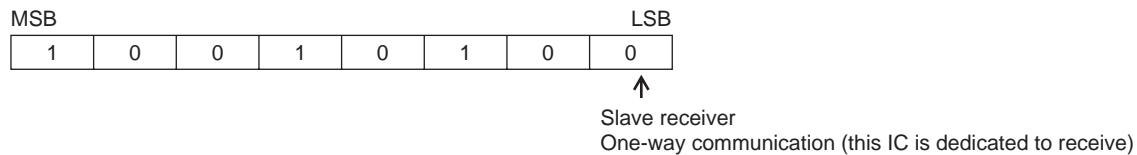

### 6. Power application and disconnection sequences

The recommended power application sequence to this IC is VCC\_ALL5V (Pin28) → VCC5V (Pins 5, 9, 13, 24, 30 and 43), VCC12V (Pin29).

(No particular order is established between VCC5V and VCC12V.) It is recommended to reverse the above sequence when power supply is turned OFF.

## **Serial Control Specification**

## 1. Slave address

2. DATA TRANSFER MANUAL : [1] is High level. [0] is Low level.

I<sup>2</sup>C-BUS control system is adopted in SW LSI. SW LSI is controlled by SCL (Serial Clock) and SDA (Serial Data). At first, please set up the START condition<sup>\*1</sup> by these two terminals (SCL and SDA). And next, please input the 8bits data, which should be synchronized with SCL into SDA terminal. Still more, please give priority to high rank bit at data transfer order (MSB→LSB). The 9th bit is called as ACK (Acknowledge), SW LSI sends [0] to the SDA terminal during SCL [1] period. So, please open the port of microprocessor during this period. LV7107M adopt auto-increment, so you input only first group-address and you can transfer data in order. As thus the Data transfer Stop condition<sup>\*2</sup> is finished.

<sup>\*1</sup> SDA rise up during SCI is [1]

<sup>\*2</sup> SDA fall down during SCL is [1]

### 3. TRANSFER DATA FORMAT

The transfer data is composed by START condition, Slave address, Group address<sup>\*4</sup>, data, and STOP condition.

After setting up the START condition, please transfer the Slave Address (regulated as “1001000” in SW LSI). Group and next control data (Please see the Fig.1)

Slave Address is composed by 7bits, and this bit 8th bit<sup>5</sup> should be set as [0].

The both of Group address and control data are composed by 8bits, and the one control action is defined with combination of these two data. And if you want to control 2 or more groups at the same mode, you can realize it by sending some control data together.

The data makes meaning with all bits, so you cannot stop the sending until all data transfer is over.

But LV7107M adopt auto-increment, for example you can stop to transfer STOP condition after group 2 data.

If you want to stop transfer action, please transfer the STOP condition without fail.

<sup>\*4</sup> There are 8 control groups.

<sup>\*5</sup>This 8th bit called as R/W bit, and this bit shows the data transmission direction. [0] means send mode (accept mode with SW LSI) and [1] means accept mode (send mode with SW LSI) fundamentally. But SW LSI is not equipped with such a data out function, please keep this bit as [0].

Fig. 1 DATA STRUCTURE

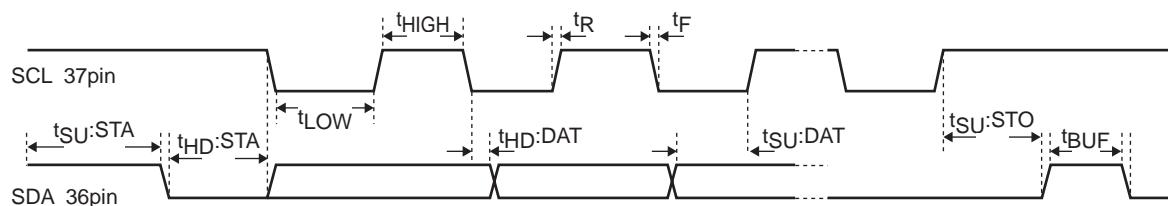

**4. INITIALIZE AND OTHERS**

SW LSI is initialized as the following mode for circuit protection. Please see “SERIAL CONTROL TABLE”.

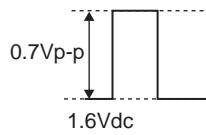

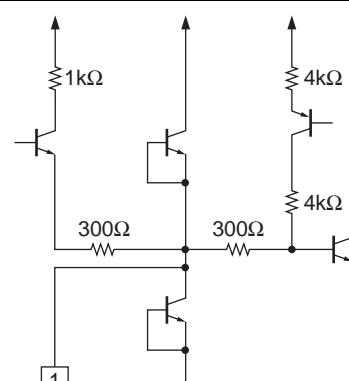

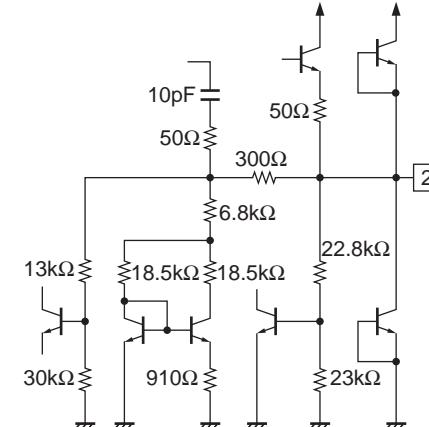

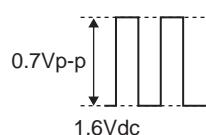

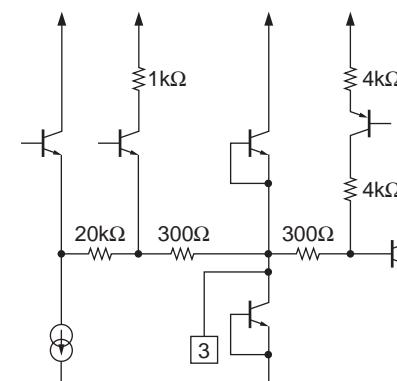

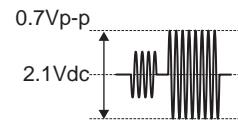

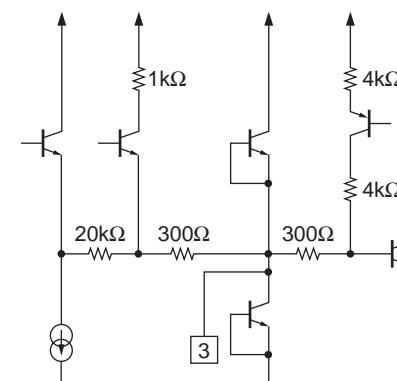

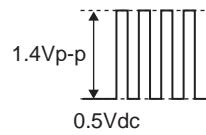

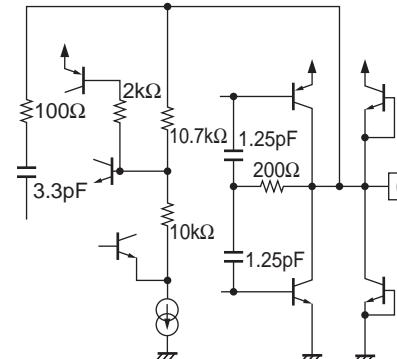

Characteristics of the SDA and SCL 1/0 stages for SW LSI

Parameter	Symbol	Min	Max	Unit
LOW level input voltage	$V_{IL}$	0	0.8	V
HIGH level input voltage	$V_{IH}$	3.0	5.0	V
LOW level output current	$I_{OL}$		3.0	mA
SCL clock frequency	$f_{SCL}$		400	kHz
Set-up time for a repeated START condition	$t_{SU:STA}$	0.6		$\mu s$
Hold time START condition. After this period, the first clock pulse is generated.	$t_{HD:STA}$	0.6		$\mu s$
LOW period of the SCL clock	$t_{LOW}$	1.3		$\mu s$
Rise time of both SDA and SDL signals	$t_R$	0	0.3	$\mu s$
HIGH period of the SCL clock	$t_{HIGH}$	0.6		$\mu s$
Fall time of both SDA and SDL signals	$t_F$	0	0.3	$\mu s$
Data hold time:	$t_{HD:DAT}$	0	0.9	$\mu s$
Data set-up time	$t_{SU:DAT}$	100		ns
Set-up time for STOP condition	$t_{SU:STO}$	0.6		$\mu s$
BUS fredd time between a STOP and START condition	$t_{BUF}$	1.3		$\mu s$

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

#### Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помошь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помошь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
