

NB3U23C

1.2 V Dual Channel CMOS Buffer / Translator

Description

The NB3U23C is a 2-input, 2-output buffer/voltage translator for UFS (Universal Flash Storage) in portable consumer applications such as mobile phones, tablets, cameras, etc. This dual channel CMOS buffer accepts 1.8 V CMOS input and translates it to 1.2 V CMOS output. The device is powered using single supply of 1.2 V $\pm 5\%$.

The NB3U23C is packaged in 2 ultra-small 6-pin packages: the 6 pin SC70 and a 6 pin thin UDFN package.

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

- Maximum ratings applied to the device are individual stress limit values (not normal operating conditions) and not valid simultaneously. If stress limits are exceeded device functional operation is not implied, damage may occur and reliability may be affected.
- JEDEC standard multilayer board – 2S2P (2 signal, 2 power).

- White noise floor.
- This parameter refers to the random jitter only.
- The output RMS phase jitter can be calculated using the following equation:
(Output RMS Phase Jitter)² = (Input RMS Phase Jitter)² + (Additive RMS Phase Jitter)²
- Measured with input voltage swing from 0 V to 1.8 V.
