# Technology Solutions

#### AlGaAs Flip Chip PIN Diodes

## **RoHS Compliant**

Rev. V4

#### Features

- Low Series Resistance
- Ultra Low Capacitance
- Millimeter Wave Switching & Cutoff Frequency
- 2 Nanosecond Switching Speed
- Can be Driven by a Buffered TTL
- Silicon Nitride Passivation
- Polyimide Scratch Protection
- RoHS Compliant

#### Description

M/A-COM's MA4AGP907 and MA4AGFCP910 are Aluminum Gallium Arsenide (AlGaAs) flip-chip PIN diodes. These devices are fabricated on OMCVD epitaxial wafers using a process designed for high device uniformity and extremely low parasitics. The diodes exhibit an extremely low RC product, (0.1ps) and 2-3nS switching characteristics. They are fully passivated with silicon nitride and have an added polymer layer for scratch protection. The protective coating prevents damage to the junction and the anode air-bridge during handling and assembly.

#### **Applications**

1

The ultra low capacitance of the MA4AGP907 and MA4AGFCP910 allows their use through millimeter frequencies for RF switches and switched phase shifter applications. The diodes are designed for use in pulsed or CW applications, where single digit nS switching speed is required. For surface mount assembly, the low capacitance of these switches make them ideal for use in microwave multi-throw switch assemblies, where the series capacitance of each "off" port adversely loads the input and affects VSWR.

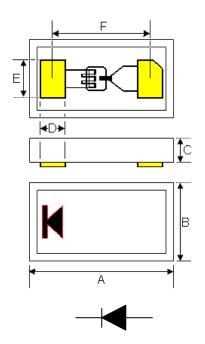

#### Absolute Maximum Ratings T<sub>AMB</sub> = +25°C (unless otherwise specified)

Parameter	Absolute Maximum			
Reverse Voltage	MA4AGP907 -50V			
	MA4AGFCP910 -75V			
Operating Temperature	-55°C to +125°C			
Storage Temperature	-55°C to +150°C			
Junction Temperature	+175°C			
Dissipated Power (RF & DC)	50mW			
C.W. Incident Power	+23 dBm			
Mounting Temperature	+280°C for 10 seconds			

ADVANCED: Data Sheets contain information regarding a product M/A-COM Technology Solutions is considering for development. Performance is based on target specifications, simulated results, and/or prototype measurements. Commitment to develop is not guaranteed.

and/or prototype measurements. Commitment to develop is not guaranteed. **PRELIMINARY**: Data Sheets contain information regarding a product M/A-COM Technology Solutions has under development. Performance is based on engineering tests. Specifications are typical. Mechanical outline has been fixed. Engineering samples and/or test data may be available. Commitment to produce in volume is not guaranteed.

#### Notes:

- 1. Gold Pads 14µM thick.
- 2. Yellow areas indicate ohmic gold mounting pads.
- 3. Dimensions A thru F are identical for both devices

Reverse Leakage Current <sup>3</sup>	I <sub>R</sub>	MA4AGP907 V <sub>R</sub> = -50V			10		10
		MA4AGFCP910 V <sub>R</sub> = -75V	μA				
Switching Speed <sup>4</sup>	T <sub>RISE</sub> T <sub>FALL</sub>	10GHz	nS	2		2	
Carrier Lifetime	TL	I <sub>F</sub> = 10mA / I <sub>REV</sub> = 6mA	nS			4	

#### Notes:

- 1) Capacitance is determined by measuring the isolation of a single series diode in a  $50\Omega$  transmission line at 10GHz.
- 2) Series resistance is determined by measuring the insertion loss of a single series diode in a  $50\Omega$  transmission line at 10GHz.
- 3) The max rated  $V_R$ (Reverse Voltage ) is sourced and the resultant reverse leakage current, Ir, is measured to be <10µA
- 4) Switching speed is measured between 10% and 90% or 90% to 10% RF voltage for a single series mounted diode. Driver delay is not included.

## **Device Installation Guidelines**

#### Cleanliness

These devices should be handled in a clean environment. The chips are resistant to solvents and may cleaned using approved industry standard practices.

#### **Static Sensitivity**

Aluminum Gallium Arsenide PIN diodes are ESD sensitive and can be damaged by static electricity. Proper ESD techniques should be used when handling these devices. These devices are rated Class 0, (0-199V) per HBM MIL-STD-883, method 3015.7 [C = 100pF  $\pm$ 10%, R = 1.5kW  $\pm$ 1%]. Even though tested die pass 50V ESD, they must be handled in a static-free environment.

#### **General Handling**

The devices have a polymer layer which provides scratch protection for the junction area and the anode air bridge. Die can be handled with plastic tweezers or picked and placed with a #27 tip vacuum pencil.

#### Assembly Requirements using Electrically Conductive Silver Epoxy and Solder

These chips are designed to be inserted onto hard or soft substrates with the junction side down. They should be mounted onto silk-screened circuits using electrically conductive silver epoxy, approximately 1-2 mils in thickness and cured at approximately 90°C to 150°C per manufacturer's schedule. For extended cure times, > 30 minutes, temperatures must be below 200°C.

#### **Eutectic Die Attached**

Tin rich solders ( >30% Sn by weight ) are not recommended as they will scavenge the gold on the contact Pads exposing the tungsten metallization beneath and creating a poor solder connection. Indalloy or 80/20, Au/Sn type solders are acceptable. Maximum soldering temperature must be kept below 280°C for less than 10 seconds.

#### Note:

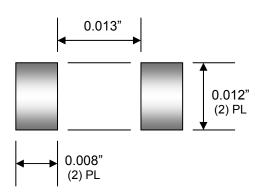

The MA4AGSBP907 which is a solder bumped version of the MA4AGP907, is also available. The datasheet can be viewed on the M/A-COM website at: <u>http://www.macom.com/DataSheets/MA4AGSBP907.pdf</u>

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
