

**FEATURES**

- **Guaranteed AC performance over temperature and voltage:**
  - > 800MHz  $f_{MAX}$  (typical)
  - < 50ps within-device skew
- **Low voltage operation:**
  - LVPECL: +3.3V  $\pm 10\%$
  - LVECL: -3.3V  $\pm 10\%$
- **Internal 75k $\Omega$  pull-down resistors**
- **Guaranteed over industrial temperature range:**  
-40°C to +85°C
- **Pin-for-pin, plug-in replacement for MC100LVE310**
- **Available in 28-pin PLCC package**

**DESCRIPTION**

The SY100E310L is a 3.3V, precision 2:8 ECL/PECL fanout buffer optimized for precision low-skew clock distribution. The SY100E310L features fully differential clock paths to minimize both device and system skew resulting in skew performance of < 50ps. In addition, the device includes a 2:1 multiplexer input for redundant switchover applications.

The SY100E310L is optimized for low voltage +3.3V LVPECL or -3.3V LVECL applications.

Data sheets and support documentation can be found on Micrel's web site at [www.micrel.com](http://www.micrel.com).

**APPLICATIONS**

- **Communications clock distribution**
- **Redundant clock switchover**
- **High-end server clock distribution**

**PIN DESCRIPTION**

Pin Number	Pin Name	Pin Function
1	VCC	Positive Core Power Supply. Bypass with 0.1μF  0.01μF low ESR capacitors. Not internally connected to V <sub>CCO</sub> . Must be externally connected to V <sub>CCO</sub> on PCB.
28, 2, 4, 5	CLKA, /CLKA CLKB, /CLKB	Differential Inputs: These input pairs are the differential data inputs to the device.
3	VBB	Reference Voltage Output. Used for AC-coupled inputs or single-ended inputs.
6	NC	No Connect.
8, 15, 22	VCCO	Positive Power Supply. Bypass with 0.1μF  0.01μF low ESR capacitors. Not internally connected to V <sub>CC</sub> . Must be externally connected to V <sub>CC</sub> on PCB.
24, 21, 19, 17, 14, 12, 10, 7	/Q0, /Q1, /Q2, /Q3 /Q4, /Q5, /Q6, /Q7	Differential Outputs.
25, 23, 20, 18, 16, 13, 11, 9	Q0, Q1, Q2, Q3 Q4, Q5, Q6, Q7	Differential Outputs.
26	VEE	Negative Supply.
27	CLK_SEL	Single-Ended Clock Select.

**Notes:**

1. Permanent device damage may occur if Absolute Maximum Ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.
2. The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.
3. Due to the limited drive capability use for input of the same package only.
4. The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.
5. Input and output parameters vary 1:1 with  $V_{CC}$ .  $V_{CC}$  can vary  $\pm 0.3\text{V}$ .
6.  $V_{IHCMR}$  is defined as the range within which the  $V_{IH}$  level may vary with the device still meeting the propagation delay specification. The  $V_{IL}$  level must be such that the peak-to-peak voltage is less than 1.0V and then greater than or equal to  $V_{PP}(\text{min})$ .

**LVNECL DC ELECTRICAL CHARACTERISTICS<sup>(7, 8)</sup>**

**Notes:**

- The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.
- Input and output parameters vary 1:1 with  $V_{CC}$ .  $V_{CC}$  can vary  $\pm 0.3V$ .
- $V_{IHCMR}$  is defined as the range within which the  $V_{IH}$  level may vary with the device still meeting the propagation delay specification. The  $V_{IL}$  level must be such that the peak-to-peak voltage is less than 1.0V and then greater than or equal to  $V_{PP(min)}$ .
- The differential propagation delay is defined as the delay from the crossing points of the differential input signals to the crossing point of the differential output signals.
- The single-ended propagation delay is defined as the delay from the 50% point of the input signal to the 50% point of the output signal.
- The within-device skew is defined as the worst case difference between any two similar delay paths within a single device.
- $V_{PP(min)}$  is defined as the minimum input differential voltage which will cause no increase in the propagation delay. The  $V_{PP(min)}$  is AC limited for the E310L as a differential input as low as 50 mV will still produce full ECL levels at the output.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
