

MAX14595

Low-Power Dual-Channel Logic-Level Translator

General Description

The MAX14595 is a dual-channel, bidirectional logic-level translator designed specifically for low power consumption making it suitable for portable and battery-powered equipment. Externally applied voltages, V_{CC} and V_L , set the logic levels on either side of the device. A logic signal present on the V_L side of the device appears as the same logic signal on the V_{CC} side of the device, and vice-versa.

The device is optimized for the I²C bus as well as the management data input/output (MDIO) bus where often high-speed, open-drain operation is required. When \overline{TS} is high, the device allows the pullup to be connected to the I/O port that has the power. This allows continuous I²C operation on the powered side without any disruption while the level translation function is off.

The part is specified over the extended -40°C to $+85^{\circ}\text{C}$ temperature range, and is available in 8-bump WLP and 8-pin TDFN packages.

- ◆ **Meets Industry Standards**
 - ◇ I²C Requirements for Standard, Fast, and High* Speeds
 - ◇ MDIO Open Drain Above 4MHz*
- ◆ **Allows Greater Design Flexibility**
 - ◇ Down to 0.9V Operation on V_L Side
 - ◇ Supports Above 8MHz Push-Pull Operation
- ◆ **Ultra-Low Power Consumption**
 - ◇ 7 μA V_{CC} Supply Current
 - ◇ 3 μA V_L Supply Current
- ◆ **Provides High Level of Integration**
 - ◇ Pullup Resistor Enabled with One Side Power Supply when \overline{TS} Is High
 - ◇ 12k Ω (max) Internal Pullup
 - ◇ Low Transmission Gate R_{ON} : 17 Ω (max)
- ◆ **Saves Space**
 - ◇ 8-Bump, 0.4mm Pitch, 0.8mm x 1.6mm WLP Package
 - ◇ 8-Pin, 2mm x 2mm TDFN Package

Applications

Portable and Battery-Powered Electronics
 Devices with I²C Communication
 Devices with MDIO Communication
 General Logic-Level Translation

*Requires external pullups.

Benefits and Features

Typical Operating Circuit

Low-Power Dual-Channel Logic-Level Translator

ABSOLUTE MAXIMUM RATINGS

Voltages referenced to GND.

V_{CC} , V_L , \overline{TS}	-0.5V to +6V
IOVCC1, IOVCC2	-0.5V to +(V _{CC} + 0.5V)
IOVL1, IOVL2	-0.5V to +(V _L + 0.5V)
Short-Circuit Duration IOVCC1, IOVCC2, IOVL1, IOVL2 to GND	Continuous
V_{CC} , IOVCC_ Maximum Continuous Current at +110°C	100mA
V_L IOVL_ Maximum Continuous Current at +110°C	40mA

\overline{TS} Maximum Continuous Current at +110°C	70mA
Continuous Power Dissipation (T _A = +70°C)	
TDFN (derate 6.2mW/°C above +70°C)	496mW
WLP (derate 11.8mW/°C above +70°C)	944mW
Operating Temperature Range	-40°C to +85°C
Storage Temperature Range	-65°C to +150°C
Lead Temperature (TDFN only, soldering, 10s)	+300°C
Soldering Temperature (reflow)	+260°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

PACKAGE THERMAL CHARACTERISTICS (Note 1)

TDFN

Junction-to-Ambient Thermal Resistance (θ_{JA})	162°C/W
Junction-to-Case Thermal Resistance (θ_{JC})	20°C/W

WLP

Junction-to-Ambient Thermal Resistance (θ_{JA})	85°C/W
--	--------

Note 1: Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to www.maximintegrated.com/thermal-tutorial.

ELECTRICAL CHARACTERISTICS

(V_{CC} = +1.65V to +5.5V, V_L = +0.9V to min(V_{CC} + 0.3V, +3.6V), T_A = -40°C to +85°C, unless otherwise noted. Typical values are at V_{CC} = +3V, V_L = +1.2V, and T_A = +25°C.) (Notes 2, 3)

			Falling	1.5	7	
Channel-to-Channel Skew	t_{SKEW}	Input rise time/fall time $< 6ns$			1.5	ns
Maximum Data Rate		Push-pull operation	8			MHz
		Open-drain operation (Note 6)	4			

Note 2: All devices are 100% production tested at $T_A = +25^\circ C$. Limits over the operating temperature range are guaranteed by design and not production tested.

Note 3: V_L must be less than or equal to V_{CC} during normal operation. However, V_L can be greater than V_{CC} during startup and shutdown conditions.

Note 4: V_{IHL} , V_{ILL} , V_{IHC} , and V_{ILC} are intended to define the range where the accelerator triggers.

Note 5: Guaranteed by design.

Note 6: External pullup resistors are required.

MAX14595

Low-Power Dual-Channel Logic-Level Translator

Block Diagram

Detailed Description

The MAX14595 is a dual-channel, bidirectional level translator. The device translates low voltage down to +0.9V on the V_L side to high voltage on the V_{CC} side and vice-versa. The device is optimized for open-drain and high-speed operation, such as I²C bus and MDIO bus.

The device has low on-resistance (17 Ω max), which is important for high-speed, open-drain operation. The device also features internal pullup resistors that are active when the corresponding power is on and \overline{TS} is high.

Level Translation

For proper operation, ensure that $+1.65V \leq V_{CC} \leq +5.5V$, and $+0.9V \leq V_L \leq V_{CC}$. When power is supplied to V_L while V_{CC} is less than V_L , the device automatically disables logic-level translation function. Also, the device enters shutdown mode when $\overline{TS} = GND$.

High-Speed Operation

The device meets the requirements of high-speed I²C and MDIO open-drain operation. The maximum data rate is at least 4MHz for open-drain operation with the total bus capacitance equal to or less than 100pF.

Three-State Input \overline{TS}

The device features a three-state input that can put the device into high-impedance mode. When \overline{TS} is low, IOVCC_ and IOVL_ are all high impedance and the internal pullup resistors are disconnected. When \overline{TS} is high, the internal pullup resistors are connected when the corresponding power is in regulation, and the resistors are disconnected at the side that has no power on. In many portable applications, one supply is turned off but the other side is still operating and requires the pullup resistors to be present. This feature eliminates the need for external pullup resistors. The level translation function is off until both power supplies are in range.

Thermal-Shutdown Protection

The device features thermal-shutdown protection to protect the part from overheating. The device enters thermal shutdown when the junction temperature exceeds +150°C (typ), and the device is back to normal operation again after the temperature drops by approximately 10°C (typ). When the device is in thermal shutdown, the level translator is disabled.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
