

## 2.8 MHz, 200 $\mu$ A Op Amps

### Features

- Supply Voltage: 2.7V to 6.0V
- Rail-to-Rail Output
- Input Range Includes Ground
- Available in SOT-23-5 Package
- Gain Bandwidth Product: 2.8 MHz (typical)
- Supply Current:  $I_Q = 200 \mu\text{A}/\text{Amplifier}$  (typical)
- Extended Temperature Range:  $-40^\circ\text{C}$  to  $+125^\circ\text{C}$

### Typical Applications

- Portable Equipment
- Photodiode Amplifier
- Analog Filters
- Data Acquisition
- Notebooks and PDAs
- Battery-Powered Systems

### Design Aids

- SPICE Macro Model
- FilterLab<sup>®</sup> Software
- Microchip Advanced Part Selector (MAPS)
- Analog Demonstration and Evaluation Boards
- Application Notes

### Typical Application

### Description

The Microchip Technology Inc. MCP6L1/1R/2/4 family of operational amplifiers (op amps) supports general-purpose applications. Battery powered circuits benefit from their low quiescent current, A/D converters from their wide bandwidth and anti-aliasing filters from their low input bias current.

This family has a 2.8 MHz Gain Bandwidth Product (GBWP) with a low 200  $\mu\text{A}$  per amplifier quiescent current. These op amps operate on supply voltages between 2.7V and 6.0V, with rail-to-rail output swing. They are available in the extended temperature range.

NOTES:

## 1.0 ELECTRICAL CHARACTERISTICS

### 1.1 Absolute Maximum Ratings †

$V_{DD} - V_{SS}$ .....	7.0V
Current at Input Pins .....	±2 mA
Analog Inputs ( $V_{IN+}$ , $V_{IN-}$ ) †† .....	$V_{SS} - 1.0V$ to $V_{DD} + 1.0V$
All Inputs and Outputs .....	$V_{SS} - 0.3V$ to $V_{DD} + 0.3V$
Difference Input voltage .....	$ V_{DD} - V_{SS} $
Output Short Circuit Current .....	Continuous
Current at Output and Supply Pins .....	±30 mA
Storage Temperature .....	-65°C to +150°C
Max. Junction Temperature .....	+150°C
ESD Protection on All Pins (HBM, MM) .....	≥ 3 kV, 200V

† **Notice:** Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those, or any other conditions above those indicated in the operational listings of this specification, is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

†† See **Section 4.1.2 “Input Voltage and Current Limits”**.

### 1.2 Specifications

**TABLE 1-1: DC ELECTRICAL SPECIFICATIONS**

Electrical Characteristics: Unless otherwise indicated, $T_A = +25^\circ\text{C}$ , $V_{DD} = 5.0V$ , $V_{SS} = \text{GND}$ , $V_{CM} = V_{SS}$ , $V_{OUT} \approx V_{DD}/2$ , $V_L = V_{DD}/2$ , and $R_L = 10\text{ k}\Omega$ to $V_L$ (refer to <a href="#">Figure 1-1</a> ).

Thermal Resistance, 8L-SOIC (150 mil)	$\theta_{JA}$	—	149.5	—	$^\circ\text{C}/\text{W}$	
Thermal Resistance, 14L-SOIC	$\theta_{JA}$	—	95.3	—	$^\circ\text{C}/\text{W}$	
Thermal Resistance, 14L-TSSOP	$\theta_{JA}$	—	100	—	$^\circ\text{C}/\text{W}$	

**Note 1:** Operation must not cause  $T_J$  to exceed Maximum Junction Temperature specification ( $150^\circ\text{C}$ ).

## 1.3 Test Circuit

The circuit used for most DC and AC tests is shown in Figure 1-1. This circuit can independently set  $V_{CM}$  and  $V_{OUT}$ ; see Equation 1-1. Note that  $V_{CM}$  is not the circuit's common-mode voltage ( $(V_P + V_M)/2$ ) and that  $V_{OST}$  includes  $V_{OS}$ , plus the effects (on the input offset error,  $V_{OST}$ ) of temperature, CMRR, PSRR and  $A_{OL}$ .

**EQUATION 1-1:**

$$G_{DM} = R_F/R_G$$

$$V_{CM} = (V_P + V_{DD}/2)/2$$

$$V_{OST} = V_{IN-} - V_{IN+}$$

$$V_{OUT} = (V_{DD}/2) + (V_P - V_M) + V_{OST}(1 + G_{DM})$$

Where:

$G_{DM}$	= Differential-Mode Gain	(V/V)
$V_{CM}$	= Op Amp's Common-Mode Input Voltage	(V)
$V_{OST}$	= Op Amp's Total Input Offset Voltage	(mV)

**FIGURE 1-1:** AC and DC Test Circuit for Most Specifications.

## 2.0 TYPICAL PERFORMANCE CURVES

**Note:** The graphs and tables provided following this note are a statistical summary based on a limited number of samples and are provided for informational purposes only. The performance characteristics listed herein are not tested or guaranteed. In some graphs or tables, the data presented may be outside the specified operating range (e.g., outside specified power supply range) and therefore outside the warranted range.

**Note:** Unless otherwise indicated,  $T_A = +25^\circ\text{C}$ ,  $V_{DD} = 5.0\text{V}$ ,  $V_{SS} = \text{GND}$ ,  $V_{CM} = V_{SS}$ ,  $V_{OUT} = V_{DD}/2$ ,  $V_L = V_{DD}/2$ ,  $R_L = 10\text{ k}\Omega$  to  $V_L$  and  $C_L = 60\text{ pF}$ .

—	—	—	—	13	$V_{IND}^-$	Inverting Input (op amp D)
—	—	—	—	14	$V_{OUTD}$	Output (op amp D)
—	1, 5, 8	—	—	—	NC	No Internal Connection

### 3.1 Analog Outputs

The analog output pins ( $V_{OUT}$ ) are low-impedance voltage sources.

### 3.2 Analog Inputs

The non-inverting and inverting inputs ( $V_{IN}^+, V_{IN}^-, \dots$ ) are high-impedance CMOS inputs with low bias currents.

### 3.3 Power Supply Pins

The positive power supply ( $V_{DD}$ ) is 2.7V to 6.0V higher than the negative power supply ( $V_{SS}$ ). For normal operation, the other pins are between  $V_{SS}$  and  $V_{DD}$ .

Typically, these parts are used in a single (positive) supply configuration. In this case,  $V_{SS}$  is connected to ground and  $V_{DD}$  is connected to the supply.  $V_{DD}$  will need bypass capacitors.

# MCP6L1/1R/2/4

---

NOTES:

## 4.0 APPLICATION INFORMATION

The MCP6L1/1R/2/4 family of op amps is manufactured using Microchip's state of the art CMOS process. They are unity gain stable and suitable for a wide range of general purpose applications.

### 4.1 Inputs

#### 4.1.1 PHASE REVERSAL

The MCP6L1/1R/2/4 op amps are designed to prevent phase inversion when the input pins exceed the supply voltages. Figure 2-10 shows an input voltage exceeding both supplies without any phase reversal.

#### 4.1.2 INPUT VOLTAGE AND CURRENT LIMITS

In order to prevent damage and/or improper operation of these amplifiers, the circuit they are in must limit the currents (and voltages) at the input pins (see Section 1.1 "Absolute Maximum Ratings †"). Figure 4-1 shows the recommended approach to protecting these inputs. The internal ESD diodes prevent the input pins ( $V_{IN+}$  and  $V_{IN-}$ ) from going too far below ground, and the resistors,  $R_1$  and  $R_2$ , limit the possible current drawn out of the input pins. Diodes,  $D_1$  and  $D_2$ , prevent the input pins ( $V_{IN+}$  and  $V_{IN-}$ ) from going too far above  $V_{DD}$ , and dump any currents onto  $V_{DD}$ .

**FIGURE 4-1:** Protecting the Analog Inputs.

A significant amount of current can flow out of the inputs (through the ESD diodes) when the common-mode voltage ( $V_{CM}$ ) is below ground ( $V_{SS}$ ); see Figure 2-7. Applications that are high-impedance may need to limit the usable voltage range.

#### 4.1.3 NORMAL OPERATION

The Common-Mode Input Voltage Range ( $V_{CMR}$ ) includes ground in single-supply systems ( $V_{SS}$ ), but does not include  $V_{DD}$ . This means that the amplifier input behaves linearly as long as the Common-Mode Input Voltage ( $V_{CM}$ ) is kept within the  $V_{CMR}$  limits (typically  $V_{SS} - 0.3V$  to  $V_{DD} - 1.3V$  at  $+25^\circ C$ ).

Figure 4-3 shows a unity gain buffer. Since  $V_{OUT}$  is the same voltage as the inverting input,  $V_{OUT}$  must be kept below  $V_{DD} - 1.2V$  (typically) for correct operation.

**FIGURE 4-2:** Unity Gain Buffer has a Limited  $V_{OUT}$  Range.

### 4.2 Rail-to-Rail Output

The output voltage range of the MCP6L1/1R/2/4 op amps is  $V_{DD} - 35 \text{ mV}$  (minimum) and  $V_{SS} + 35 \text{ mV}$  (maximum) when  $R_L = 10 \text{ k}\Omega$  is connected to  $V_{DD}/2$  and  $V_{DD} = 5.0V$ . Refer to Figure 2-13 for more information.

### 4.3 Capacitive Loads

Driving large capacitive loads can cause stability problems for voltage feedback op amps. As the load capacitance increases, the feedback loop's phase margin decreases and the closed-loop bandwidth is reduced. This produces gain peaking in the frequency response, with overshoot and ringing in the step response.

When driving large capacitive loads with these op amps (e.g.,  $> 100 \text{ pF}$  when  $G = +1$ ), a small series resistor at the output ( $R_{ISO}$  in Figure 4-3) improves the feedback loop's stability by making the output load resistive at higher frequencies; the bandwidth will usually be decreased.

**FIGURE 4-3:** Output Resistor,  $R_{ISO}$ , Stabilizes Large Capacitive Loads.

Bench measurements are helpful in choosing  $R_{ISO}$ . Adjust  $R_{ISO}$  so that a small signal step response (see Figure 2-14) has reasonable overshoot (e.g., 4%).

# MCP6L1/1R/2/4

## 4.4 Supply Bypass

With this family of operational amplifiers, the power supply pin ( $V_{DD}$  for single supply) should have a local bypass capacitor (i.e., 0.01  $\mu\text{F}$  to 0.1  $\mu\text{F}$ ) within 2 mm for good high-frequency performance. It also needs a bulk capacitor (i.e., 1  $\mu\text{F}$  or larger) within 100 mm to provide large, slow currents. This bulk capacitor can be shared with other nearby analog parts.

## 4.5 Unused Op Amps

An unused op amp in a quad package (e.g., MCP6L4) should be configured, as shown in Figure 4-4. These circuits prevent the output from toggling and causing crosstalk. Circuit A sets the op amp at its minimum noise gain. The resistor divider produces any desired reference voltage within the output voltage range of the op amp; the op amp buffers that reference voltage. Circuit B uses the minimum number of components and operates as a comparator, but it may draw more current.

FIGURE 4-4: Unused Op Amps.

## 4.6 PCB Surface Leakage

In applications where low input bias current is critical, the PCB (Printed Circuit Board) surface leakage effects need to be considered. Surface leakage is caused by humidity, dust or other contamination on the board. Under low humidity conditions, a typical resistance between nearby traces is  $10^{12}\Omega$ . A 5V difference would cause 5 pA of current to flow; this is greater than this family's bias current at +25°C (1 pA, typical).

The easiest way to reduce surface leakage is to use a guard ring around sensitive pins (or traces). The guard ring is biased at the same voltage as the sensitive pin. Figure 4-5 shows an example of this type of layout.

FIGURE 4-5: Example Guard Ring Layout.

- Inverting Amplifiers (Figure 4-5) and Transimpedance Gain Amplifiers (convert current to voltage, such as photo detectors).
  - Connect the guard ring to the non-inverting input pin ( $V_{IN+}$ ); this biases the guard ring to the same reference voltage as the op amp's input (e.g.,  $V_{DD}/2$  or ground).
  - Connect the inverting pin ( $V_{IN-}$ ) to the input with a wire that does not touch the PCB surface.
- Non-Inverting Gain and Unity Gain Buffer.
  - Connect the guard ring to the inverting input pin ( $V_{IN-}$ ); this biases the guard ring to the common-mode input voltage.
  - Connect the non-inverting pin ( $V_{IN+}$ ) to the input with a wire that does not touch the PCB surface.

## 4.7 Application Circuits

### 4.7.1 ACTIVE LOW-PASS FILTER

Figure 4-6 shows a second-order Butterworth filter, with a 10 Hz cutoff frequency and a gain of +1 V/V, using a Sallen Key topology. Microchip's FilterLab® software designed the filter, then the capacitors were reduced in value (using the same program).

FIGURE 4-6: Sallen Key Topology.

Figure 4-7 shows a filter with the same requirements, except the gain is -1 V/V, in a Multiple Feedback Topology. It was designed in a similar fashion using FilterLab.

FIGURE 4-7: Multiple Feedback Topology.

## 5.0 DESIGN AIDS

Microchip provides the basic design aids needed for the MCP6L1/1R/2/4 family of op amps.

### 5.1 SPICE Macro Model

The latest SPICE macro model for the MCP6L1/1R/2/4 op amp is available on the Microchip web site at [www.microchip.com](http://www.microchip.com). The model was written and tested in official Orcad (Cadence) owned PSPICE. For other simulators, translation may be required.

The model covers a wide aspect of the op amp's electrical specifications. Not only does the model cover voltage, current and resistance of the op amp, but it also covers the temperature and noise effects on the behavior of the op amp. The model has not been verified outside of the specification range listed in the op amp data sheet. The model behaviors under these conditions cannot be ensured to match the actual op amp performance.

Moreover, the model is intended to be an initial design tool. Bench testing is a very important part of any design and cannot be replaced with simulations. Also, simulation results using this macro model need to be validated by comparing them to the data sheet specifications and characteristic curves.

### 5.2 FilterLab® Software

Microchip's FilterLab software is an innovative software tool that simplifies analog active filter (using op amps) design. Available at no cost from the Microchip web site at [www.microchip.com/filterlab](http://www.microchip.com/filterlab), the Filter-Lab design tool provides full schematic diagrams of the filter circuit with component values. It also outputs the filter circuit in SPICE format, which can be used with the macro model to simulate actual filter performance.

### 5.3 Microchip Advanced Part Selector (MAPS)

MAPS is a software tool that helps efficiently identify Microchip devices that fit a particular design requirement. Available at no cost from the Microchip web site at [www.microchip.com/maps](http://www.microchip.com/maps), the MAPS is an overall selection tool for Microchip's product portfolio that includes Analog, Memory, MCUs and DSCs. Using this tool, a customer can define a filter to sort features for a parametric search of devices and export side-by-side technical comparison reports. Helpful links are also provided for data sheets, purchasing and sampling of Microchip parts.

## 5.4 Analog Demonstration and Evaluation Boards

Microchip offers a broad spectrum of analog demonstration and evaluation boards that are designed to help customers achieve faster time to market. For a complete listing of these boards and their corresponding user's guides and technical information, visit the Microchip web site at:

[www.microchip.com/analog\\_tools](http://www.microchip.com/analog_tools).

Some boards that are especially useful are:

- MCP6XXX Amplifier Evaluation Board 1
- MCP6XXX Amplifier Evaluation Board 2
- MCP6XXX Amplifier Evaluation Board 3
- MCP6XXX Amplifier Evaluation Board 4
- Active Filter Demo Board Kit
- P/N VSUPEV2: 5/6-Pin SOT-23 Evaluation Board
- P/N SOIC8EV: 8-Pin SOIC/MSOP/TSSOP/DIP Evaluation Board
- P/N SOIC14EV: 14-Pin SOIC/TSSOP/DIP Evaluation Board

## 5.5 Application Notes

The following Microchip Application Notes are available on the Microchip web site at:

[www.microchip.com/appnotes](http://www.microchip.com/appnotes) and are recommended as supplemental reference resources.

**ADN003:** "Select the Right Operational Amplifier for your Filtering Circuits", DS21821

## 5-Lead Plastic Small Outline Transistor (OT) [SOT-23]

**Note:** For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packaging>

Dimension Limits	Units	MILLIMETERS		
		MIN	NOM	MAX
Contact Pitch	E	0.95 BSC		
Contact Pad Spacing	C		2.80	
Contact Pad Width (X5)	X			0.60
Contact Pad Length (X5)	Y			1.10
Distance Between Pads	G	1.70		
Distance Between Pads	GX	0.35		
Overall Width	Z			3.90

**Notes:**

1. Dimensioning and tolerancing per ASME Y14.5M

BSC: Basic Dimension. Theoretically exact value shown without tolerances.

Microchip Technology Drawing No. C04-2091A

## 8-Lead Plastic Micro Small Outline Package (MS) [MSOP]

**Note:** For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packaging>

Microchip Technology Drawing C04-111C Sheet 1 of 2

# MCP6L1/1R/2/4

## 8-Lead Plastic Micro Small Outline Package (MS) [MSOP]

**Note:** For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packaging>

Dimension Limits	Units	MILLIMETERS		
		MIN	NOM	MAX
Number of Pins	N		8	
Pitch	e	0.65 BSC		
Overall Height	A	-	-	1.10
Molded Package Thickness	A2	0.75	0.85	0.95
Standoff	A1	0.00	-	0.15
Overall Width	E	4.90 BSC		
Molded Package Width	E1	3.00 BSC		
Overall Length	D	3.00 BSC		
Foot Length	L	0.40	0.60	0.80
Footprint	L1	0.95 REF		
Foot Angle	φ	0°	-	8°
Lead Thickness	c	0.08	-	0.23
Lead Width	b	0.22	-	0.40

**Notes:**

- Pin 1 visual index feature may vary, but must be located within the hatched area.
- Dimensions D and E1 do not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.15mm per side.
- Dimensioning and tolerancing per ASME Y14.5M.

BSC: Basic Dimension. Theoretically exact value shown without tolerances.  
 REF: Reference Dimension, usually without tolerance, for information purposes only.

Microchip Technology Drawing C04-111C Sheet 2 of 2

## 8-Lead Plastic Micro Small Outline Package (MS) [MSOP]

**Note:** For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packaging>

RECOMMENDED LAND PATTERN

Dimension Limits	Units	MILLIMETERS		
		MIN	NOM	MAX
Contact Pitch	E	0.65 BSC		
Contact Pad Spacing	C		4.40	
Overall Width	Z			5.85
Contact Pad Width (X8)	X1			0.45
Contact Pad Length (X8)	Y1			1.45
Distance Between Pads	G1	2.95		
Distance Between Pads	GX	0.20		

Notes:

1. Dimensioning and tolerancing per ASME Y14.5M

BSC: Basic Dimension. Theoretically exact value shown without tolerances.

Microchip Technology Drawing No. C04-2111A

## APPENDIX A: REVISION HISTORY

### Revision C (January 2012)

The following is the list of modifications:

1. Corrected CMRR value condition in [Table 1-1](#).
2. Updated packages temperature values in [Table 1-3](#).
3. Corrected values in first paragraph of **Section 4.1.3 “Normal Operation”**.

### Revision B (September 2011)

The following is the list of modifications:

1. Updated [Section 3.0 “Pin Descriptions”](#).
2. Updated the value for the Current at Output and Supply Pins parameter in [Section 1.1 “Absolute Maximum Ratings †”](#).
3. Added [Section 5.1 “SPICE Macro Model”](#).

### Revision A (March 2009)

- Original Release of this Document.

# MCP6L1/1R/2/4

NOTES:

## PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

<u>PART NO.</u>	<u>X</u>	<u>/XX</u>	
Device	Temperature Range	Package	
Device:	MCP6L1T:	Single Op Amp (Tape and Reel) (SOT-23, MSOP, SOIC)	
	MCP6L1RT:	Single Op Amp (Tape and Reel) (SOT-23)	
	MCP6L2T:	Dual Op Amp (Tape and Reel) (SOIC, MSOP)	
	MCP6L4T:	Quad Op Amp (Tape and Reel) (SOIC, TSSOP)	
Temperature Range:	E	= -40°C to +125°C	
Package:	OT	= Plastic Small Outline Transistor (SOT-23), 5-lead	
	MS	= Plastic MSOP, 8-lead	
	SN	= Plastic SOIC, (3.99 mm body), 8-lead	
	SL	= Plastic SOIC (3.99 mm body), 14-lead	
	ST	= Plastic TSSOP (4.4mm body), 14-lead	

<b>Examples:</b>	
a)	MCP6L1T-E/OT: Tape and Reel, Extended Temperature, 5LD SOT-23 package
b)	MCP6L1T-E/MS: Tape and Reel, Extended Temperature, 8LD MSOP package.
c)	MCP6L1T-E/SN: Tape and Reel, Extended Temperature, 8LD SOIC package.
a)	MCP6L1RT-E/OT: Tape and Reel, Extended Temperature, 5LD SOT-23 package.
a)	MCP6L2T-E/MS: Tape and Reel, Extended Temperature, 8LD MSOP package.
b)	MCP6L2T-E/SN: Tape and Reel, Extended Temperature, 8LD SOIC package.
a)	MCP6L4T-E/SL: Tape and Reel, Extended Temperature, 14LD SOIC package.
b)	MCP6L4T-E/ST: Tape and Reel, Extended Temperature, 14LD TSSOP package.

---

NOTES:

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

**QUALITY MANAGEMENT SYSTEM**  
**CERTIFIED BY DNV**  
**== ISO/TS 16949:2009 ==**

*Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC<sup>®</sup> MCUs and dsPIC<sup>®</sup> DSCs, KEELOQ<sup>®</sup> code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.*

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
