

## OMNIFET: fully autoprotected Power MOSFET

Datasheet - production data

- Diagnostic feedback through input pin
- ESD protection
- Direct access to the gate of the Power MOSFET (analog driving)
- Compatible with standard Power MOSFET
- Standard TO-220 package
- Compliant with 2002/95/EC European directive

### Description

The VNP35N07-E, VNB35N07-E and VNV35N07-E are monolithic devices made using STMicroelectronics VIPower® technology, intended for replacement of standard Power MOSFETs in DC to 50 KHz applications.

Built-in thermal shutdown, linear current limitation and overvoltage clamp protect the chip in harsh environments.

Fault feedback can be detected by monitoring the voltage at the input pin.

### Features

Type	V <sub>clamp</sub>	R <sub>DS(on)</sub>	I <sub>lim</sub>
VNP35N07-E	70 V	0.028 Ω	35 A
VNB35N07-E	70 V	0.028 Ω	35 A
VNV35N07-E	70 V	0.028 Ω	35 A

- Automotive qualified
- Linear current limitation
- Thermal shutdown
- Short circuit protection
- Integrated clamp
- Low current drawn from input pin

## 2 Electrical specification

### 2.1 Absolute maximum rating

Stressing the device above the rating listed in [Table 3](#) may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the operating sections of this specification is not implied. Exposure to the conditions in table below for extended periods may affect device reliability.

**Table 2. Absolute maximum ratings**

Symbol	Parameter	Value		Unit
		D <sup>2</sup> PAK PowerSO-10	TO-220	
V <sub>DS</sub>	Drain-source voltage (V <sub>in</sub> = 0)	Internally clamped		V
V <sub>in</sub>	Input voltage	18		V
I <sub>D</sub>	Drain current	Internally limited		A
I <sub>R</sub>	Reverse DC output current	-50		A
V <sub>esd</sub>	Electrostatic Discharge (C = 100 pF; R = 1.5 KΩ)	2000		V
P <sub>tot</sub>	Total dissipation at T <sub>C</sub> = 25°C	125	40	W
T <sub>J</sub>	Operating junction temperature	Internally limited		°C
T <sub>C</sub>	Case operating temperature	Internally limited		°C
T <sub>stg</sub>	Storage temperature	-55 to 150		°C

### 2.2 Thermal data

**Table 3. Thermal data**

Symbol	Parameter	Value			Unit
		PowerSO-10	D <sup>2</sup> PAK	TO-220	
R <sub>thj-case</sub>	Thermal Resistance Junction-case (max)	1	1	3.12	°C/W
R <sub>thj-amb</sub>	Thermal Resistance Junction-ambient (max)	50	62.5	62.5	°C/W

## 2.3 Electrical characteristics

$T_{\text{case}} = 25^{\circ}\text{C}$  unless otherwise specified.

**Table 4. Off**

Symbol	Parameter	Test Conditions	Min	Typ	Max	Unit
$V_{\text{CLAMP}}$	Drain-source clamp voltage	$I_{\text{D}} = 200 \text{ mA}; V_{\text{in}} = 0 \text{ V}$	60	70	80	V
$V_{\text{CLTH}}$	Drain-source clamp threshold voltage	$I_{\text{D}} = 2 \text{ mA}; V_{\text{in}} = 0 \text{ V}$	55			V
$V_{\text{INCL}}$	Input-source reverse clamp voltage	$I_{\text{in}} = -1 \text{ mA}$	-1		-0.3	V
$I_{\text{DSS}}$	Zero input voltage drain current ( $V_{\text{in}} = 0 \text{ V}$ )	$V_{\text{DS}} = 13 \text{ V}; V_{\text{in}} = 0 \text{ V}$			50	mA
		$V_{\text{DS}} = 25 \text{ V}; V_{\text{in}} = 0 \text{ V}$			200	$\mu\text{A}$
$I_{\text{ISS}}$	Supply current from input pin	$V_{\text{DS}} = 0 \text{ V}; V_{\text{in}} = 10 \text{ V}$		250	500	$\mu\text{A}$

**Table 5. On**

Symbol	Parameter	Test Conditions	Min	Typ	Max	Unit
$V_{\text{IN(th)}}^{(1)}$	Input threshold voltage	$V_{\text{DS}} = V_{\text{in}}; I_{\text{D+}}, I_{\text{in}} = 1 \text{ mA}$	0.8	—	3	V
$R_{\text{DS(on)}}^{(1)}$	Static drain-source on resistance	$V_{\text{in}} = 10 \text{ V}; I_{\text{D}} = 18 \text{ A}$		—	0.028	$\Omega$
		$V_{\text{in}} = 5 \text{ V}; I_{\text{D}} = 18 \text{ A}$		—	0.035	$\Omega$

### 3 Protection features

During normal operation, the Input pin is electrically connected to the gate of the internal power MOSFET. The device then behaves like a standard power MOSFET and can be used as a switch from DC to 50 KHz. The only difference from the user's standpoint is that a small DC current ( $I_{ISS}$ ) flows into the Input pin in order to supply the internal circuitry.

The device integrates:

- **Overvoltage Clamp Protection:** internally set at 70V, along with the rugged avalanche characteristics of the Power MOSFET stage give this device unrivalled ruggedness and energy handling capability. This feature is mainly important when driving inductive loads.
- **Linear Current Limiter Circuit:** limits the drain current  $I_D$  to  $I_{lim}$  whatever the Input pin voltage. When the current limiter is active, the device operates in the linear region, so power dissipation may exceed the capability of the heatsink. Both case and junction temperatures increase, and if this phase lasts long enough, junction temperature may reach the overtemperature threshold  $T_{jsh}$ .
- **Overtemperature and Short Circuit Protection:** these are based on sensing the chip temperature and are not dependent on the input voltage. The location of the sensing element on the chip in the power stage area ensures fast, accurate detection of the junction temperature. Overtemperature cutout occurs at minimum 150°C. The device is automatically restarted when the chip temperature falls below 135°C.
- **Status Feedback:** in the case of an overtemperature fault condition, a Status Feedback is provided through the input pin. The internal protection circuit disconnects the input from the gate and connects it instead to ground via an equivalent resistance of 100  $\Omega$ .

The failure can be detected by monitoring the voltage at the Input pin, which will be close to ground potential.

Additional features of this devices are ESD protection according to the Human Body model and the ability to be driven from a TTL Logic circuit (with a small increase in  $R_{DS(on)}$ ).

## 4 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK<sup>®</sup> packages, depending on their level of environmental compliance. ECOPACK<sup>®</sup> specifications, grade definitions and product status are available at: [www.st.com](http://www.st.com).

ECOPACK<sup>®</sup> is an ST trademark.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
