

HMC566

GaAs PHEMT MMIC LOW NOISE AMPLIFIER, 29 - 36 GHz

Typical Applications

The HMC566 is ideal for use as a LNA or driver amplifier for:

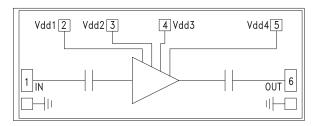

v00.0306

- Point-to-Point Radios
- Point-to-Multi-Point Radios & VSAT
- Test Equipment and Sensors
- Military & Space

Features

Noise Figure: 2.8 dB Gain: 20 dB OIP3: 23.5 dBm Single Supply: +3V @ 80 mA 50 Ohm Matched Input/Output Small Size: 2.54 x 0.98 x 0.10 mm

Functional Diagram

General Description

The HMC566 is a high dynamic range GaAs PHEMT MMIC Low Noise Amplifier (LNA) chip which operates from 29 to 36 GHz. The HMC566 provides 20 dB of small signal gain, 2.8 dB of noise figure and output IP3 of 23.5 dBm across the operating band. This selfbiased LNA is ideal for hybrid and MCM assemblies due to its compact size, slightly positive gain slope, single +3V supply operation, and DC blocked RF I/O's. All data is measured with the chip in a 50 Ohm test fixture connected via two 0.025 mm (1 mil) diameter bondwires of minimal length 0.31 mm (12 mil).

Electrical Specifications, $T_A = +25^{\circ}$ C, Vdd 1, 2, 3, 4 = +3V

| Parameter | Min. | Тур. | Max. | Min. | Тур. | Max. | Units |
|--|------|---------|------|------|---------|------|--------|
| Frequency Range | | 29 - 33 | | | 33 - 36 | | GHz |
| Gain | 17 | 20 | | 19 | 22 | | dB |
| Gain Variation Over Temperature | | 0.03 | 0.05 | | 0.03 | 0.05 | dB/ °C |
| Noise Figure | | 2.8 | 3.3 | | 2.8 | 3.3 | dB |
| Input Return Loss | | 15 | | | 15 | | dB |
| Output Return Loss | | 9 | | | 8 | | dB |
| Output Power for 1 dB Compression (P1dB) | 9 | 12 | | 9 | 12 | | dBm |
| Saturated Output Power (Psat) | | 14.5 | | | 14.5 | | dBm |
| Output Third Order Intercept (IP3) | | 23.5 | | | 23.5 | | dBm |
| Supply Current (Idd)(Vdd = +3V) | | 80 | | | 80 | | mA |

GaAs PHEMT MMIC LOW NOISE AMPLIFIER, 29 - 36 GHz

Absolute Maximum Ratings

| Drain Bias Voltage (Vdd1, 2, 3, 4) | +3.5 Vdc |
|---|----------------|
| RF Input Power (RFIN)(Vdd = +3.0 Vdc) | +5 dBm |
| Channel Temperature | 175 °C |
| Continuous Pdiss (T= 85 °C) (derate 9.6 mW/°C above 85 °C) | 0.82 W |
| Thermal Resistance (channel to die bottom) | 104.2 °C/W |
| Storage Temperature | -65 to +150 °C |
| Operating Temperature | -55 to +85 °C |

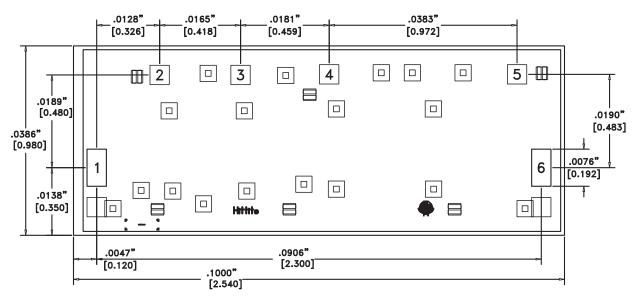

Typical Supply Current vs. Vdd

| Vdd (Vdc) | ldd (mA) | | |
|-----------|----------|--|--|
| +2.5 | 77 | | |
| +3.0 | 80 | | |
| +3.5 | 83 | | |

Note: Amplifier will operate over full voltage ranges shown above.

Die Packaging Information^[1]

| Standard | Alternate | |
|-----------------|-----------|--|
| GP-2 (Gel Pack) | [2] | |

[1] Refer to the "Packaging Information" section for die packaging dimensions.

[2] For alternate packaging information contact Hittite Microwave Corporation.

NOTES:

- 1. ALL DIMENSIONS ARE IN INCHES [MM]
- 2. DIE THICKNESS IS .004"
- 3. TYPICAL BOND IS .004" SQUARE
- 4. BACKSIDE METALLIZATION: GOLD
- 5. BOND PAD METALLIZATION: GOLD
- 6. BACKSIDE METAL IS GROUND.
- 7. CONNECTION NOT REQUIRED FOR UNLABELED BOND PADS.

Pad Descriptions

| Pad Number | Function | Description | Interface Schematic | |
|------------|---------------|---|---------------------|--|
| 1 | IN | This pad is AC coupled and matched to 50 Ohms from 29 - 36 GHz. | IN 0 | |
| 2, 3, 4, 5 | Vdd1, 2, 3, 4 | Power Supply Voltage for the amplifier. External bypass capacitors of 100 pF and 0.1 μF are required. | OVdd1,2,3,4 | |
| 6 | OUT | This pad is AC coupled and matched to 50 Ohms from 29 - 36 GHz. | | |
| Die Bottom | GND | Die Bottom must be connected to RF/DC ground. | | |

v00.0306

HMC566

GaAs PHEMT MMIC LOW NOISE AMPLIFIER, 29 - 36 GHz

Mounting & Bonding Techniques for Millimeterwave GaAs MMICs

The die should be attached directly to the ground plane eutectically or with conductive epoxy (see HMC general Handling, Mounting, Bonding Note).

50 Ohm Microstrip transmission lines on 0.127mm (5 mil) thick alumina thin film substrates are recommended for bringing RF to and from the chip (Figure 1). If 0.254mm (10 mil) thick alumina thin film substrates must be used, the die should be raised 0.150mm (6 mils) so that the surface of the die is coplanar with the surface of the substrate. One way to accomplish this is to attach the 0.102mm (4 mil) thick die to a 0.150mm (6 mil) thick molybdenum heat spreader (moly-tab) which is then attached to the ground plane (Figure 2).

Microstrip substrates should be brought as close to the die as possible in order to minimize bond wire length. Typical die-to-substrate spacing is 0.076mm (3 mils).

Handling Precautions

Follow these precautions to avoid permanent damage.

Storage: All bare die are placed in either Waffle or Gel based ESD protective containers, and then sealed in an ESD protective bag for shipment. Once the sealed ESD protective bag has been opened, all die should be stored in a dry nitrogen environment.

Cleanliness: Handle the chips in a clean environment. DO NOT attempt to clean the chip using liquid cleaning systems.

Static Sensitivity: Follow ESD precautions to protect against $> \pm 250V$ ESD strikes.

Transients: Suppress instrument and bias supply transients while bias is applied. Use shielded signal and bias cables to minimize inductive pick-up.

General Handling: Handle the chip along the edges with a vacuum collet or with a sharp pair of bent tweezers. The surface of the chip has fragile air bridges and should not be touched with vacuum collet, tweezers, or fingers.

Mounting

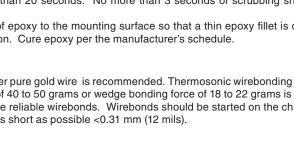

The chip is back-metallized and can be die mounted with AuSn eutectic preforms or with electrically conductive epoxy. The mounting surface should be clean and flat.

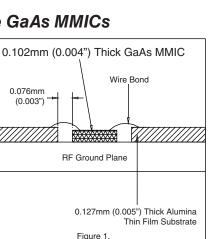

Eutectic Die Attach: A 80/20 gold tin preform is recommended with a work surface temperature of 255 °C and a tool temperature of 265 °C. When hot 90/10 nitrogen/hydrogen gas is applied, tool tip temperature should be 290 °C. DO NOT expose the chip to a temperature greater than 320 °C for more than 20 seconds. No more than 3 seconds of scrubbing should be required for attachment.

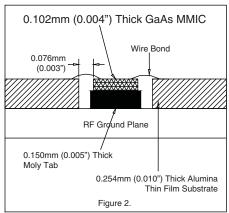

Epoxy Die Attach: Apply a minimum amount of epoxy to the mounting surface so that a thin epoxy fillet is observed around the perimeter of the chip once it is placed into position. Cure epoxy per the manufacturer's schedule.

Wire Bonding

Ball or wedge bond with 0.025 mm (1 mil) diameter pure gold wire is recommended. Thermosonic wirebonding with a nominal stage temperature of 150 °C and a ball bonding force of 40 to 50 grams or wedge bonding force of 18 to 22 grams is recommended. Use the minimum level of ultrasonic energy to achieve reliable wirebonds. Wirebonds should be started on the chip and terminated on the package or substrate. All bonds should be as short as possible <0.31 mm (12 mils).

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
