

## FEATURES

- Fully Compliant with the Intel VRM9.0/9.1 VID Specification
- Programs Regulator Output Voltage from 1.10V to 1.85V in 25mV Steps
- Programs an Entire Family of Linear Technology DC/DC Converters
- $\pm 0.25\%$  Accurate Voltage Divider
- Built-In 40k Pull-Up Resistors on Program Inputs
- Available in MSOP-10 Packaging

## APPLICATIONS

- Intel Pentium® III Processor Power Supply
- Multiprocessor Workstations and Servers
- Multiphase Processor Power Supply
- AMD Athlon™ Processor Power Supply

## DESCRIPTION

The LTC®1706-82 is a precision, digitally programmed, resistive ladder which adjusts the output of any 0.8V referenced regulator. Depending on the state of the five VID inputs, an output voltage between 1.10V and 1.85V is programmed in 25mV increments.

The LTC1706-82 is designed specifically to program an entire family of Linear Technology DC/DC converters in full compliance with the Intel VRM9.0/9.1 specifications.

The LTC1706-82 programs the following Linear Technology DC/DC converters: LTC1628, LTC1629, LTC1702, LTC1735, LTC1735-1, LTC1929 and LTC3729.

For a compact VRM9.0/9.1 solution with up to 60A capability, see the LTC3732, a 3-phase synchronous controller with integrated 5-bit VID and MOSFET drivers.

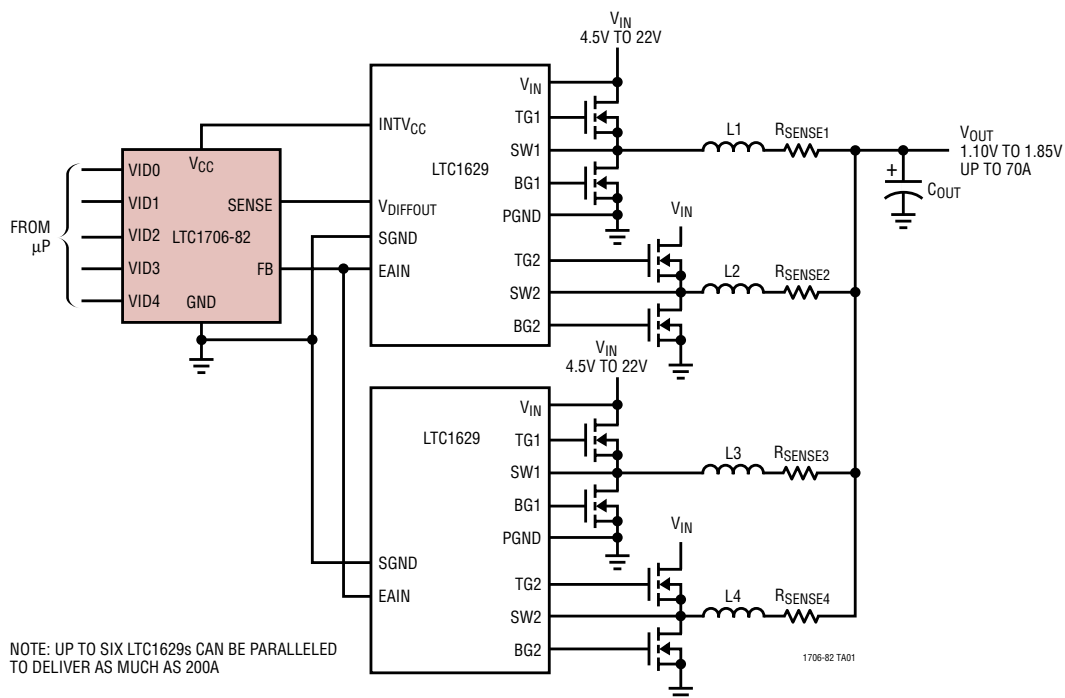

LT, LTC and LT are registered trademarks of Linear Technology Corporation.

Pentium is a registered trademark of Intel Corporation.

AMD Athlon is a trademark of Advanced Micro Devices, Inc.

## TYPICAL APPLICATION

VID Controlled High Current 4-Phase DC/DC Converter (Simplified Block Diagram)

## ABSOLUTE MAXIMUM RATINGS

(Note 1)

(Voltages Referred to GND Pin)

Input Supply Voltage ( $V_{CC}$ ) .....	-0.3V to 7V
VID Input Pins .....	-0.3V to 7V
SENSE Pin .....	-0.3V to 7V
FB Pin .....	-0.3V to 7V
Operating Temperature Range (Note 2) ..	-40°C to 85°C
Junction Temperature .....	110°C
Storage Temperature Range .....	-65°C to 150°C
Lead Temperature (Soldering, 10 sec) .....	300°C

## ELECTRICAL CHARACTERISTICS

The ● denotes the specifications which apply over the full operating temperature range, otherwise specifications are at  $T_A = 25^\circ\text{C}$ .  $2.7\text{V} \leq V_{CC} \leq 5.5\text{V}$ ,  $\text{VID0} = \text{VID1} = \text{VID2} = \text{VID3} = \text{VID4} = \text{NC}$  unless otherwise specified.

SYMBOL	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
$V_{CC}$	Operating Supply Voltage Range		2.7		5.5	V
$I_{VCC}$	Supply Current	(Note 3)		0.1	5.0	$\mu\text{A}$
$R_{\text{FB-SENSE}}$	Resistance Between SENSE and FB		● 6	10	14	$\text{k}\Omega$
$V_{\text{OUT Error \%}}$	Output Voltage Accuracy	Programmed From 1.10V to 1.85V	● -0.25		0.25	%
$R_{\text{PULLUP}}$	VID Input Pull-Up Resistance	$V_{\text{DIODE}} = 0.6\text{V}$ , (Note 4)		40		$\text{k}\Omega$
$\text{VID}_T$	VID Input Voltage Threshold	$V_{\text{IL}} (2.7\text{V} < V_{CC} < 5.5\text{V})$ $V_{\text{IH}} (2.7\text{V} < V_{CC} < 5.5\text{V})$	1.6		0.4	V
$I_{\text{VID-LEAK}}$	VID Input Leakage Current	$V_{CC} < \text{VID} < 7\text{V}$ , (Note 4)		0.01	$\pm 1.00$	$\mu\text{A}$
$V_{\text{PULLUP}}$	VID Pull-Up Voltage	$V_{CC} = 3.3\text{V}$ $V_{CC} = 5\text{V}$		2.8	4.5	V

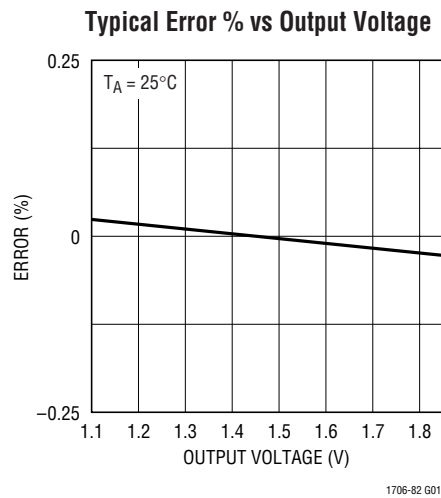

**Note 1:** Absolute Maximum Ratings are those values beyond which the life of a device may be impaired.

**Note 2:** The LTC1706-82 is guaranteed to meet performance specifications from 0°C to 70°C. Specifications over the -40°C to 85°C operating temperature range are assured by design, characterization and correlation with statistical process controls.

**Note 3:** With all five VID inputs floating, the  $V_{CC}$  supply current is simply the device leakage current. However, the  $V_{CC}$  supply current will rise and be approximately equal to the number of grounded VID input pins times  $(V_{CC} - 0.6\text{V})/40\text{k}$ . (See the Applications Information section for more detail.)

**Note 4:** Each built-in pull-up resistor attached to the VID inputs also has a series diode connected to  $V_{CC}$  to allow input voltages higher than the  $V_{CC}$  supply without damage or clamping. (See Operation section for further details.)

# TYPICAL PERFORMANCE CHARACTERISTICS

## PIN FUNCTIONS

**VID0 (Pin 1):** LSB Programming Input. Low = GND, High =  $V_{CC}$  or Float. Grounding VID0 adds 25mV to the output sense voltage.

**VID1 (Pin 2):** 4th MSB Programming Input. Low = GND, High =  $V_{CC}$  or Float. Grounding VID1 adds 50mV to the output sense voltage.

**VID2 (Pin 3):** 3rd MSB Programming Input. Low = GND, High =  $V_{CC}$  or Float. Grounding VID2 adds 100mV to the output sense voltage.

**VID3 (Pin 4):** 2nd MSB Programming Input. Low = GND, High =  $V_{CC}$  or Float. Grounding VID3 adds 200mV to the output sense voltage.

**$V_{CC}$  (Pin 5):** Power Supply Voltage. Range from 2.7V to 5.5V.

**SENSE (Pin 6):** Regulator Output Voltage. Connect directly to regulator output sense node or  $V_{DIFFOUT}$  when used with the LTC1629 and LTC1929.

**VID4 (Pin 7):** MSB Programming Input. Low = GND, High =  $V_{CC}$  or Float. Grounding VID4 adds 400mV to the output sense voltage.

**NC (PIN 8):** No Connect.

**GND (Pin 9):** Ground. Connect to regulator signal ground.

**FB (Pin 10):** Feedback Input. Connect to the 0.8V feedback pin of a compatible regulator or the EAIN pin of the LTC1629, LTC1929 and LTC3729.

## PIN TABLE

PIN	NAME	DESCRIPTION	NOMINAL (V)			ABSOLUTE MAX (V)	
			MIN	TYP	MAX	MIN	MAX

9	GND	Ground		0		-0.3	7
10	FB	0.8V Feedback Input	0	0.8	1.075	-0.3	7

## BLOCK DIAGRAM

1706-82 BD

## OPERATION

The LTC1706-82 is a precision resistive divider designed specifically for use with an entire family of Linear Technology Corporation DC/DC switching regulators with 0.8V internal reference and feedback voltages. The LTC1706-82 produces an output voltage ranging from 1.10V to 1.85V in 25mV steps by closing the loop between the output voltage sense and the feedback input of the regulator with the appropriate resistive divider network.

The “top” feedback resistor,  $R_{FB1}$ , connected between SENSE and FB, is typically 10k and is not modified by the state of the VID program inputs.

The “bottom” feedback resistor,  $R_{FB2}$ , however, is modified by the five VID inputs and is precisely ratioed to  $R_{FB1}$ .

### VID Programming

A list of programmed inputs and their corresponding output voltages is shown in Table 1. Programming is accomplished by applying the proper voltage (or float condition) on the five digital VID inputs. VID4 is the most significant bit (MSB) and VID0 is the least significant bit (LSB).

When the five VID inputs are low, or grounded, the regulator output voltage is set to 1.85V. Each increasing binary count is equivalent to a decrease of 25mV in the output voltage. Therefore, to obtain a 1.10V output, only VID0 is grounded while the other four VID inputs are tied high or floating.

When all five VID inputs are high or floating, such as when no CPU is present in a system, a regulated 1.075V output is generated at  $V_{SENSE}$ .

170682fa

## OPERATION

Each VID input pin is pulled up by a 40k resistor in series with a diode connected to  $V_{CC}$ . Therefore, it should be grounded (or driven low) to produce a digital low input. It can be either floated or connected to  $V_{CC}$  to get a digital high input. The series diode is included to prevent the input from being damaged or clamped when it is driven higher than  $V_{CC}$ .

### Voltage Sensing and Feedback Pins

The FB pin is a high impedance node that requires minimum layout distance to reduce extra loading and unwanted stray pickup.

When used with the LTC1629, the LTC1706-82's FB, SENSE,  $V_{CC}$  and GND pins should be connected, respectively, with the EAIN,  $V_{DIFFOUT}$ , INT $V_{CC}$ , and SGND pins of the LTC1629. The result of this application is a precisely controlled, multiphase, variable output voltage supply to any low voltage, high current system such as a powerful personal computer, workstation or network server. True remote sense capability of the LTC1629 is also retained in this case.

### VID Input Characteristics

The VID inputs should be driven with a maximum  $V_{IL}$  of 0.4V and a minimum  $V_{IH}$  of 1.6V. However, the VID input range is not limited to values less than  $V_{CC}$ . Because of the internal diode between  $V_{CC}$  and the pull-up resistor, the inputs can go higher than  $V_{CC}$  without being clamped to  $V_{CC}$  or damaging the input.

This allows the LTC1706-82 to be fully logic compatible and operational over a higher input voltage range (less than the 7V absolute maximum rating).

When a VID input is grounded, there will be a higher quiescent current flow from  $V_{CC}$  because of a resistor from  $V_{CC}$  through a series diode to each one of the VID inputs. This increase in quiescent current is calculated from

$$I_Q = N(V_{CC} - V_{DIODE})/R_{PULLUP}$$

$N$  is the number of grounded VID inputs.  $V_{DIODE}$  is typically 0.6V while  $R_{PULLUP}$  has a typical pullup resistance of 40k.

In other words, each VID input has a typical pull up current of  $(V_{CC} - 0.6)/40K$ , which is approximately 68 $\mu$ A for a 3.3V system.

**Table 1. VID Inputs and Corresponding Output Voltage**

## APPLICATIONS INFORMATION

Besides the LTC1629, the LTC1706-82 also programs a whole family of LTC DC/DC converters that have an onboard 0.8V reference. The LTC1628, LTC1735, LTC1702, LTC1772, LTC1929 and LTC3729 are just a few of the high efficiency step-down switching regulators that will work equally well with the LTC1706-82.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
