

# Telephone Line Interface and Speakerphone Circuit AS2522B

## Key Features

- Line/Speech circuit, DTMF dialer, FSK transmitter and tone ringer on a 32-pin CMOS-IC
- Enhanced voice switching
- Background noise monitoring
- DTMF tone generator
- FSK Transmitter V.23, BELL202, V.21, BELL 103
- Ringer tone programmable
- Tx- and Rx-gain programmable
- Digital volume control of Rx signals
- DC characteristic programmable
- Dual softclipping in handset mode
- Tx-softclipping in handsfree mode
- Common monitor amplifier for loudhearing, handsfree and ringing
- Supply voltage generation for external circuitry
- Automatic line loss compensation (LLC)
- Real and complex impedance selectable by external components
- Side tone adaptation selectable by external components
- Unique EMC performance
- Operating range from 15mA to 100mA (down to 5mA with reduced performance)
- Few external components

## General Description

AS2522 is a CMOS integrated circuit that incorporates DC and AC line adaptation (DC-mask and synthesized AC-impedance of  $1000\Omega$ ) as well as a speech circuit with softclipping, line loss compensation and Rx-volume control for handset and handsfree operation. It shall act as an a/b-line powered device, which is controlled by a CPU via a serial interface. Furthermore the AS2522 incorporates a DTMF, FSK transmitter, single tone and ringer tone generator.

AS2522 allows to use an off-the-shelf microprocessor without special blocks and functions for telephone applications. DTMF, FSK transmitter, single tone and ringer tone generator can be controlled via the serial interface as well as the gain settings in handset and handsfree mode.

## Applications

Enhanced handsfree feature phones with CallerID and extended displays.

## Package

Available in 32-pin TQFP

## Block Diagram

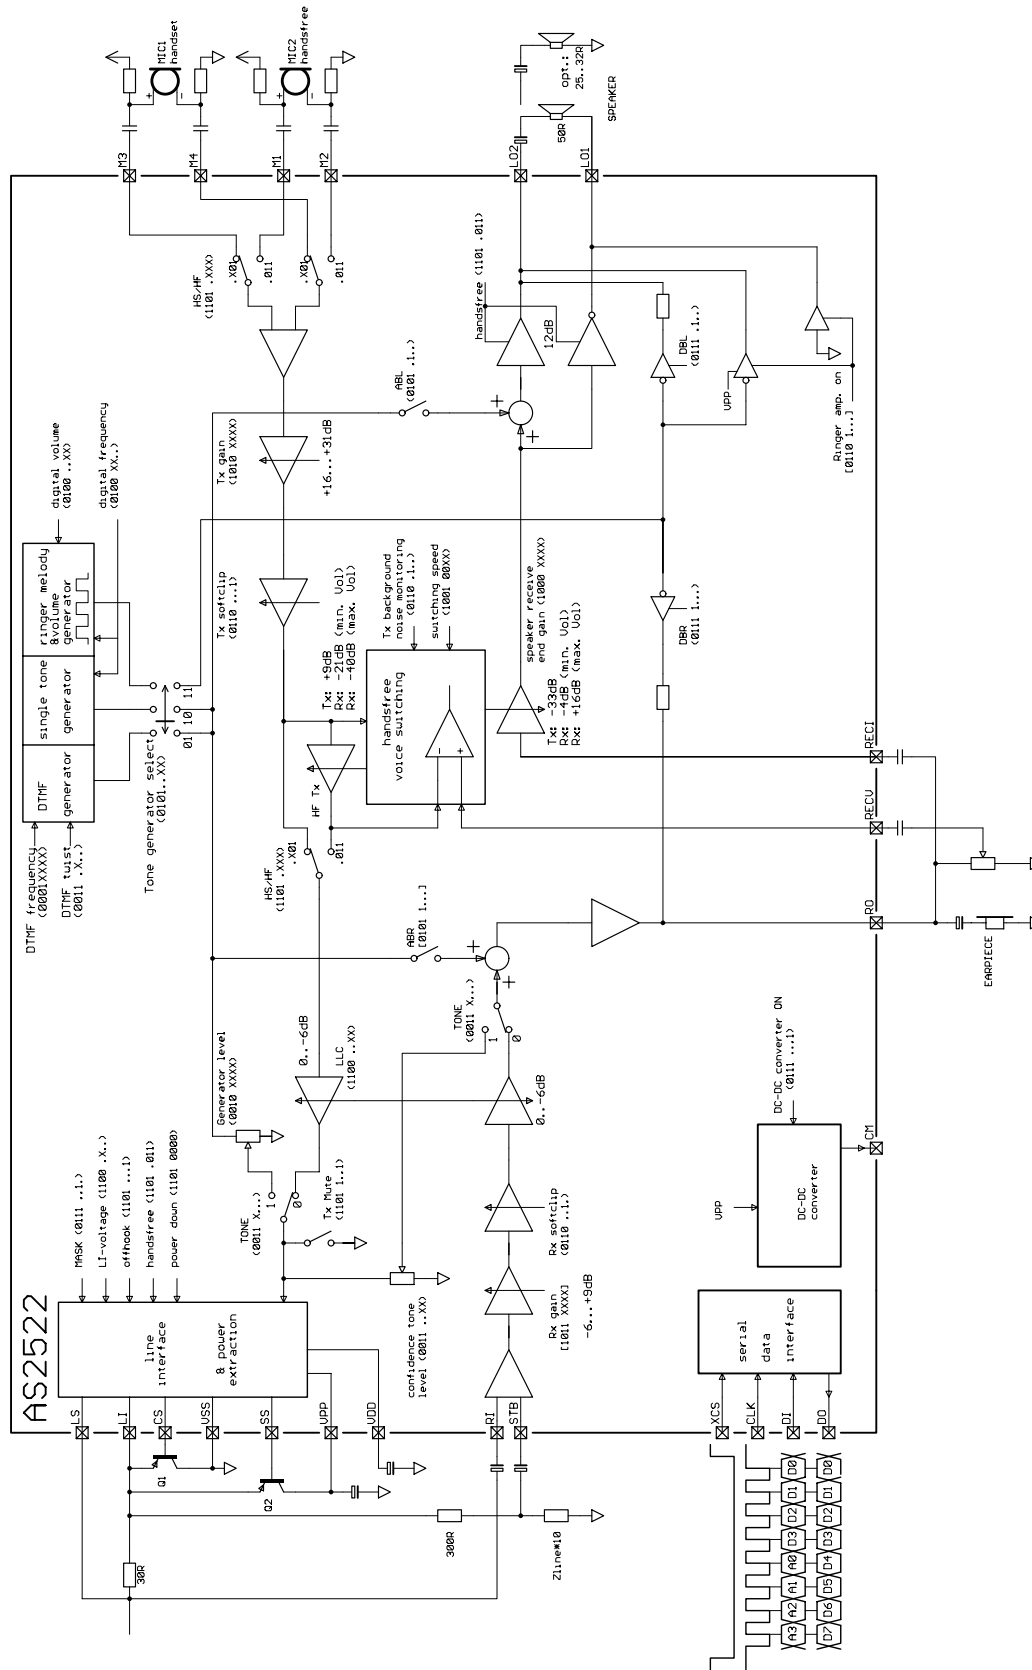

## Pin description

Pin #	Symbol	Function
13	LS	<b>Line Current Sense Input</b> Analog input for sensing the line current
10	LI	<b>Line Input</b> Analog input used for power extraction and line current sensing
11	RI	<b>Receive Input</b> Analog input for ac-separated receive signal
7	STB	<b>Side Tone Balance Input</b> Analog input for side tone cancellation network
8	CS	<b>Current Shunt Control Output</b> N-channel open drain output to control the external high power shunt transistor for synthesizing AC- and DC-impedance, modulation of line voltage and shorting the line during make periods of pulse dialing
14	CI	<b>Complex Impedance Input</b> Analog input pin for the capacitor to program a complex impedance
12	SS	<b>Supply Source Control Output</b> N-channel open drain output to control the external high power source transistor for supplying (Vpp) the loudspeaker amplifier in off-hook loudspeaking/handsfree mode
9	VSS	<b>Voltage Source Source</b> Negative Analog Power Supply
18	VDD	<b>Voltage Drain Drain</b> Positive Analog Power Supply
19	AGND	<b>Analog Ground</b> Special ground for the internal amplifiers
6	M1	<b>Microphone Input 1</b> Differential input for the handset microphone (electret)
4	M2	<b>Microphone Input 2</b> Differential input for the handset microphone (electret)
5	M3	<b>Microphone Input 3</b> Differential input for the handsfree microphone (electret)
3	M4	<b>Microphone Input 4</b> Differential input for the handsfree microphone (electret)
17	RO	<b>Receive Output to Handset</b> Output for driving a dynamic earpiece with an impedance from 150Ω to 300Ω
31	OSC	<b>Oscillator Input</b> Input for ceramic resonator 3.58MHz.

Pin #	Symbol	Function
22	VPP	Loudspeaker Power Supply High power supply for the output driver stage
21	CM	Converter Make Output This is an output for controlling the external switching converter. During ringing it converts the ring signal into a 4V supply voltage
27	xCS	Chip Select Chip select input of the serial interface. Internal pull-up resistor ( 100kOhm )
29	DI	Data Input Data input of the serial interface. Internal pull-up resistor ( 100kOhm )
30	CLK	Clock Clock input of the serial interface. Internal pull-up resistor ( 100kOhm )
28	DO	Data Output Data output of the serial interface. If xCS=1 DO is in HI-Z state
24 23	LO1 LO2	Loudspeaker Output 1 and 2 Output pins for a 50Ω loudspeaker
1	FT1	Analog input pin for connecting a capacitor for offset cancellation.
2	FT2	Analog input pin for connecting a capacitor for offset cancellation.
20	CBN	Analog input pin for connecting a capacitor for background noise monitoring.
15	RECI	Analog input for the handsfree receive path. Should be connected to RO via coupling capacitor.
16	RECV	Analog input for receive voice switching path.
25	VSSA	Power supply pin for LS1-LS2 output amplifier.
32	VSSD	Voltage Source Source Digital Negative Digital Power Supply
26	VDDD	Voltage Drain Drain Digital Positive Digital Power Supply

# Detailed Block Diagram

## Functional Description

### DC conditions

The normal operating mode is from 15mA to 100mA. An operating mode with reduced performance is from 5mA to 15mA. In the line hold range from 0mA to 5mA the device is in a power down mode.

The DC characteristic is determined by the voltage at LI-pin and a 30Ω resistor between LI- and LS-pin. It can be calculated by the following equation:  $V_{LS} = V_{LI} + I_{Line} \cdot 30\Omega$ .  $V_{LI}$  can be programmed to be 3.5V or 4.5V.

### 2/4 wire conversion

AS2522 has a built-in dual Wheatstone bridge with one common ground. This provides a maximum of independence of AC-impedance and side tone from each other. One can adapt side tone without changing the AC-impedance.

### AC-impedance

The AC-impedance of AS2522 is set to t.m. 1000Ω. With the external capacitor at CI-pin it can be programmed complex. With an external resistor of approx. 1.5kΩ connected to the LS-pin it can be programmed to 600Ω.

### Side Tone

A good side tone cancellation can be achieved by using the following equation:

$$Z_{BAL}/Z_{LINE} = 10$$

### Transmit path

The gain of the M1/M2 → LS is set to +37dB. This gain can be changed by programming from +30dB to +45dB in 1dB steps (Register *Txgain*). The input is differential with an impedance of 10kΩ. The soft clip circuit limits the output voltage at LS to 2Vp. There is LLC for this path.

The gain of the M3/M4 → LS is set to +46dB.

This gain can be changed by programming from +39dB to +54dB in 1dB steps. The input is differential with an impedance of 10kΩ. The soft clip circuit limits the output voltage at LS to 2Vp. There is no LLC for this path.

### Receive path

The gain of the LS → RO receive path is set to +1dB. This gain can be changed by programming from -6dB to +9dB in 1dB steps (Register *Rxgain*). The receive input is the differential signal of RI and STB. The soft clip circuit

limits the output voltage at RO to 1Vp. It prevents harsh distortion and acoustic shock. There is LLC for this path.

The gain of the LS → LO1/LO2 receive path is set to +29dB. This gain can be changed by programming from +22dB to -37dB in 1dB steps. The user can also change the gain via Register *VOL* (See section "Handsfree"). The receive input is the differential signal of RI and STB. The soft clip circuit limits the output voltage at LO1 of LO2 to 1Vp. It prevents harsh distortion and acoustic shock. There is optional LLC for this path.

### Line Loss Compensation

The line loss compensation is programmable (Register *0x0C*). When it is activated, the transmit and receive gains for both I/O's are decreased by 6dB at line currents from 20mA to 50mA or from 45mA to 75mA.

### Handsfree

The handsfree function allows voice communication without using the handset (full 2-way speaker phone). Two voice controlled attenuators prevent acoustic coupling between the loudspeaker and the microphone. The voice switching circuit has three states, namely idle, transmit or receive. In receive mode the attenuation of the receive path and the transmit path can be controlled by Register *VOL* between 0dB and -20dB. The following table shows how voice switching is controlled

Speech	Mode	Rx-gain	Tx-gain	Remark
Rx > Tx_atten	X	Receive	0db to -20dB	adjustable with VOL-setting
Tx_atten > Rx	NO	Idle	-25	middle position
Tx_atten > Rx	YES	Transmit	-50dB	independent of VOL-setting

## Serial Interface

### Registers

The settings of the AS2522 are stored in 16 registers. Each register has 4 bit data width. Writing data into the AS2522 also causes the sending of the AS2522 status information on Pin D0. This information consists of the DC-current information (from the Line Loss Compensation circuit) and the status of the power-on reset circuit to test if AS2522 has already powered up.

D7	D6	D5	D4	D3	D2	D1	D0
LLC5	LLC4	LLC3	LLC2	LLC1	LLC0	xPOR	POR

Power on reset information in Statusbits D1 and D0

D1	D0	
0	0	
0	1	AS2522 is in POR state
1	0	AS2522 is active
1	1	

DC-current information in Statusbits D7 – D2

D[7:2]	LLC-bit LO	LLC-bit HI
000000	<20mA	<45mA
000001	20-26mA	45-51mA
000011	26-32mA	51-57mA
000111	32-38mA	57-63mA
001111	38-44mA	63-69mA
011111	44-50mA	69-75mA
111111	>50mA	>75mA

### Timing

The data format for writing to a register has the following form:

Note: The pins xCS,CLK,DI have internal pull-up resistors.

Parameter	Symbol	MIN	TYP	MAX
CLK Pulse width HIGH	t6	100ns		
CLK Pulse width LOW	t5	100ns		
xCS to first falling CLK-edge setup time	t1	50ns		
CLK to DOUT delay	t2		50ns	
DIN to CLK setup time	t3	50ns		
DIN to CLK hold time	t4	50ns		

## Serial interface Registers

The following table shows the content of the 16 control registers.

For a detailed description of the commands see Application note AN522.

Address	Data	Control registers AS2522A, AS2522B	Default value after reset

## Electrical characteristics

Electrical characteristics are measured with the Test Circuit application. Typical mean values will not be tested.

### Absolute maximum ratings

Positive Supply Voltage	-0.3V ≤ VDD ≤ 7V
Input Current	+/- 25mA
Input Voltage (LS)	-0.3V ≤ Vin ≤ 12V
Input Voltage (LI, CS)	-0.3V ≤ Vin ≤ 8V
Input Voltage (STB, RI)	-2V ≤ Vin ≤ VDD+0.3V
Digital Input Voltage	-0.3V ≤ Vin ≤ VDD+0.3V
Electrostatic Discharge (HBM 1.5kΩ-100pF)	+/- 1000V
Storage Temperature	-65°C to +125°C

### Recommended operating conditions

Supply Voltage (generated internally)	3V ≤ VDD ≤ 5V
Operating Temperature	-25°C to +70°C

### DC characteristics

## Packaging

32-pin plastic TQFP (suffix Q)

For exact mechanical package dimensions please see austriamicrosystems<sub>AG</sub> packaging information.

## Pin-out, Marking

YY	year of production
WW	calendar week of production
AAA	austriamicrosystems <sub>AG</sub> assembly ID
X	revision

## Ordering Information

Number	Package	Description
AS2522B Q	TQFP	plastic thin quad flat package – 32 leads (suffix T)
AS2522B F	DOF	Dice-on-Foil

Devices sold by austriamicrosystems AG are covered by the warranty and patent identification provisions appearing in its Term of Sale. austriamicrosystems AG makes no warranty, express, statutory, implied, or by description regarding the information set forth herein or regarding the freedom of the described devices from patent infringement. austriamicrosystems AG reserves the right to change specifications and prices at any time and without notice. Therefore, prior to designing this product into a system, it is necessary to check with austriamicrosystems AG for current information. This product is intended for use in normal commercial applications. Applications requiring extended temperature range, unusual environmental requirements, or high reliability applications, such as military, medical life-support or life-sustaining equipment are specifically not recommended without additional processing by austriamicrosystems AG for each application.

## Distributors & Representatives

austriamicrosystems AG is represented by distributors in the following countries. Please contact your nearest regional sales office for the distributor address:

Spain, Israel, Korea, Hong-Kong, Taiwan, Malaysia, Singapore, India, Brazil

## Application Support

Please contact your local sales office or your distributor.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
