FMC CONNECTIVITY CARD

For Glenair PCB Mount Opto-Electronic Converters

Glenair 050-344 FPGA Mezzanine Card (FMC) Connectivity Card provides a convenient method to easily incorporate a wide range of Glenair Harsh Environment PCB Mount Transceiver, Transmitter and Receiver products as well as Glenair size 8 Opto-electronic transmitter and receiver contacts into FPGA based systems. It is compatible with Xilinx® evaluation boards with FMC connector(s) board and uses the High Pin Count (HPC) version of the FMC connector.

This FMC card is offered in three configurations, see how to order information, to support all categories of Glenair PCB Mount devices. Electrical connections to PCB Mount Opto-electronic devices are through high speed Samtec connector mounted on the 050-344 card. The card has an FMC High Pin Count (HPC) connector to mate to the Host FPGA carrier board which interface with four high-speed serial transceivers on the FPGA carrier board. It is compatible with either HPC or Low Pin Count (LPC) connector (restricted to single high-speed serial transceiver for LPC) on the host board. The 050-344 card also incorporates LEDs for RX LOS indications as well as a low-jitter 156.25MHz oscillator for use as a clock source for the high-speed serial transceivers. The board also incorporates I²C current monitor IC and an I²C GPIO IC so each DUT can be monitored. 22 GPIO pins are also made available for the user.

KEY FEATURES/BENEFITS

U7 I²C GPIO

This is an I2C controlled GPIO device that can be used to read the RX_LOS signal and TX_FAULT status of each transceiver as well as set the TX_DISABLE lines to disable the transmitter output. If control of this is not desired the user can use a jumper on the J5, J6, J7 and J8 headers to manually enable the transmitter output. The headers are also marked on the board as TXDIS_0 for channel 0 (single XCVR) TXDIS_1 for channel 1 (Dual XCVR first chan.) and so on.
