

#### PROTECTION PRODUCTS - MicroClamp<sup>®</sup>

#### Description

The  $\mu$ Clamp<sup>®</sup> series of TVS arrays are designed to protect sensitive electronics from damage or latch-up due to ESD. It is designed to replace single line devices such as multilayer varistors (MLVs) in space constrained applications such as cell phones, notebook computers, and other portable electronics. It features large cross-sectional area junctions for conducting high transient currents. TVS diodes offer desirable characteristics for board level protection including fast response time, low operating and clamping voltage, and no device degradation.

The  $\mu$ Clamp<sup>®</sup>0505T is in a 6-pin SLP1313P6T package. It measures 1.3 x 1.3 mm with a nominal height of only 0.4mm. The leads are spaced at a pitch of 0.4mm and are finished with lead-free NiPdAu. Each device features five TVS diodes with an operating voltage of 5 volts and a maximum loading capacitance of only 10pF. They may be used to meet the ESD immunity requirements of IEC 61000-4-2, Level 4 ( $\pm 15$ kV air,  $\pm 8$ kV contact discharge). The combination of small size and high ESD surge capability makes them ideal for use in portable applications such as cellular phones, digital cameras, and notebook computers.

### Applications Information

#### Device Connection Options

This device is designed to protect five data lines. The device is unidirectional and may be used on lines where the signal polarity is above ground.

#### Circuit Board Layout Recommendations for Suppression of ESD.

Good circuit board layout is critical for the suppression of ESD induced transients. The following guidelines are recommended:

- Place the TVS near the input terminals or connectors to restrict transient coupling.
- Minimize the path length between the TVS and the protected line.
- Minimize all conductive loops including power and ground loops.
- The ESD transient return path to ground should be kept as short as possible.
- Never run critical signals near board edges.
- Use ground planes whenever possible.
