## Reliability

Vetron qualification will include aging at various extreme temperatures, shock and vibration, temperature cycling, and IR reflow simulation. The VC-820 family is capable of meeting the following qualification tests:

Table 6. Environmental Compliance

Parameter	Conditions
Mechanical Shock	MIL-STD-883, Method 2002
Mechanical Vibration	MIL-STD-883, Method 2007
Solderability	MIL-STD-883, Method 2003
Gross and Fine Leak	MIL-STD-883, Method 1014
Resistance to Solvents	MIL-STD-883, Method 2015
Moisture Sensitivity Level	MSL 1
Contact Pads	Gold (0.3µm min - 1.µm max) over Nickel
Weight	27 mg

Although ESD protection circuitry has been designed into the VC-820 proper precautions should be taken when handling and mounting. Vectron employs a human body model (HBM) and a charged device model (CDM) for ESD susceptibility testing and design protection evaluation.

Table 7. ESD Ratings

Model	Minimum	Conditions
Human Body Model	1500V	MIL-STD-883, Method 3015
Charged Device Model	1000V	JESD22-C101

Stresses in excess of the absolute maximum ratings can permanently damage the device. Functional operation is not implied at these or any other conditions in excess of conditions represented in the operational sections of this datasheet. Exposure to absolute maximum ratings for extended periods may adversely affect device reliability. Permanent damage is also possible if E/D is applied before  $V_{DD}$ .

**Table 8. Absolute Maximum Ratings**

Parameter	Symbol	Ratings	Unit
Storage Temperature	$T_S$	-55 to 125	°C
Soldering Temp/Time	$T_{LS}$	260 / 30	°C / sec

## IR Reflow

Solderprofile:

The VC-820 is qualified to meet the JEDEC standard for Pb-Free assembly. The temperatures and time intervals listed are based on the Pb-Free small body requirements. The VC-820 device is hermetically sealed so an aqueous wash is not an issue.

**Table 8. Reflow Profile**

Parameter	Symbol	Value
PreHeat Time $T_S$ -min $T_S$ -max	$t_s$	60 sec Min, 260 sec Max 150°C 200°C
