

# Single-phase DC Brushless Motor Driver IC

## ■ GENERAL DESCRIPTION

The NJU7356 is a single-phase DC brushless motor driver IC designed for small and high power fan-motor applications.

It provides a low operating current of 2mA (typ.) and low saturation output voltage at high output current operation, which offers a high efficiency motor driving. It also has a high output current capability of 1000mA (peak) and 400mA (continuous).

The NJU7356 has useful functions such as a FG (frequency generator) output useful for various control systems, lock detect, auto-release (c-less type), thermal shutdown and linear driving which offers low noise motor driving. The NJU7356 is available in a small and thin package of MSOP8 (TVSP8), which provides downsizing and thinning in motor applications.

## ■ FEATURES

- Operating Voltage                    2.2 to 5.5V
- Low Operating Current             $I_{DD}=2mA$
- Low Saturation Output Voltage  
    $V_{sat}= \pm 0.2V @ I_o=\pm 400mA$
- Lock Detect / Auto Release Circuit
- Thermal Shutdown Circuit
- Frequency Generator Output
- Hall Bias Terminal
- CMOS Technology

## APPLICATION NOTE

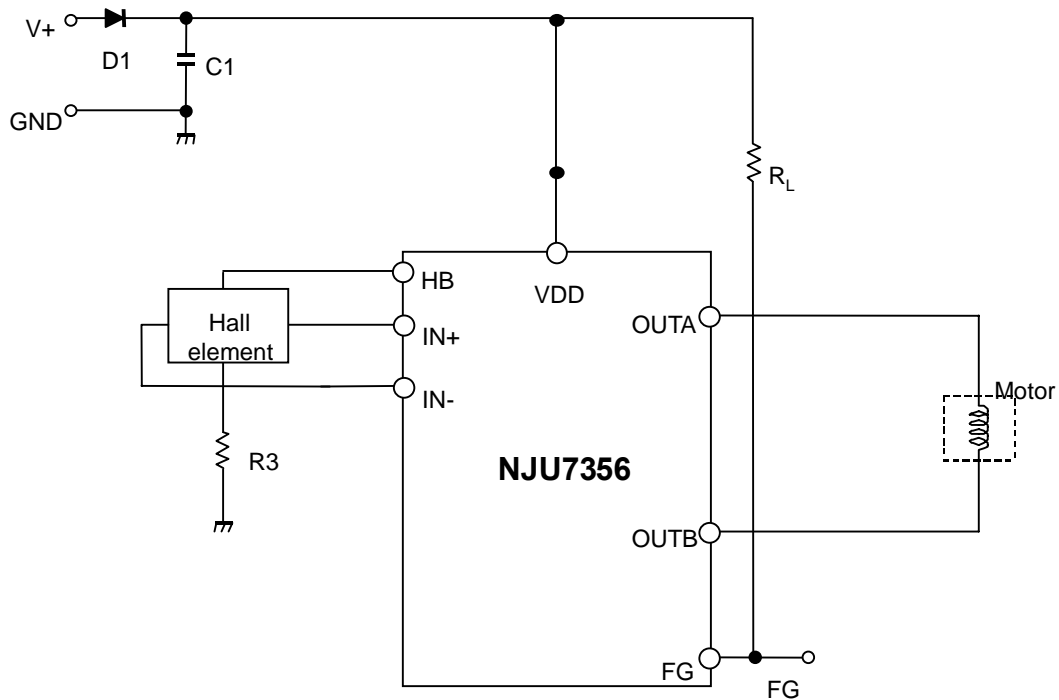

The NJU7356 is a single-phase DC brushless motor driver IC in small MSOP8 (TVSP8) package. With minimal external components, that can drive up to 400mA of motor current for small fan application.

[Application Circuit Example]

### 1) Hall Bias unused application circuit

### 2) Hall bias used application circuit

## [Design Notes]

Above application example is designed for 5V operation with motor current of 400mA. It uses the following components:

Hall elements: HW101A (AKE)

### 1. Selection of C1 and D1:

C1 is used for a noise reduction purpose. A typical value is 0.1uF. Optimize the value in actual operating conditions if necessary. D1 is a diode for protection against reverse voltage supply. Silicon rectifier diode (WO3C, 10D1 and equivalent) is appropriate.

### 2. Position Detection Circuit Hall Device

#### 2-1. When using $V_{DD}$ (**R1 and R2**)

Hall amplifier is a differential amplifier.

The common-mode input voltage is between 0.4V and  $V_{DD}-1V$  and the input signal must be within the range. Non-excitation hall bias voltage is to be set at a half of  $V_{DD}$  for effective use of common-mode input voltage range. Therefore the same value of hall bias resistors is selected for R1 and R2.

Given that the bias current is set to be 5mA by HW101A datasheet, R1 and R2 can be determined as follows:

$$R1 + R2 + R_{in} = \frac{V_{DD}}{I_{bias}} = \frac{5}{5 \times 10^{-3}} = 1.0k\Omega$$

$$R1 = R2 = 300\Omega$$

The output voltage of hall elements is influenced by the bias current and magnetic flux density of hall elements.

The optimum input voltage of NJU7356 is 100mVp-p and higher. With such input voltage, the highest efficiency can be obtained.

## 2-2. When using HB (R3 design)

By connecting a Hall device to the Hall bias terminal (HB), a constant Hall output amplitude that has good temperature characteristics is obtained, resulting in stable linear drive. If it is necessary to adjust the Hall output amplitude, perform adjustment with R3.

## 3. Design of FG output resistance ( $R_L$ )

FG Out (FG: Pin5) is an open drain output and  $R_L$  is a pull up register. A typical value of  $R_L$  is 10k $\Omega$ .

The timing chart of FG Out is as follows.

Note that the pull up resistance shall be connected to below supply voltage.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
