

## FIN3385 • FIN3383 • FIN3384 • FIN3386

### Low Voltage 28-Bit Flat Panel Display Link Serializers/Deserializers

#### General Description

The FIN3385 and FIN3383 transform 28 bit wide parallel LVTTTL (Low Voltage TTL) data into 4 serial LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data stream over a separate LVDS link. Every cycle of transmit clock 28 bits of input LVTTTL data are sampled and transmitted.

The FIN3386 and FIN3384 receive and convert the 4/3 serial LVDS data streams back into 28/21 bits of LVTTTL data. Refer to Table 1 for a matrix summary of the Serializers and Deserializers available. For the FIN3385, at a transmit clock frequency of 85MHz, 28 bits of LVTTTL data are transmitted at a rate of 595Mbps per LVDS channel.

These chipsets are an ideal solution to solve EMI and cable size problems associated with wide and high-speed TTL interfaces.

#### Features

- Low power consumption
- 20 MHz to 85 MHz shift clock support
- $\pm 1V$  common-mode range around 1.2V
- Narrow bus reduces cable size and cost
- High throughput (up to 2.38 Gbps throughput)
- Internal PLL with no external component
- Compatible with TIA/EIA-644 specification
- Devices are offered 56-lead TSSOP packages

#### Ordering Code:

| Order Number | Package Number | Package Description                                                         |
|--------------|----------------|-----------------------------------------------------------------------------|
| FIN3383MTD   | MTD56          | 56-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 6.1mm Wide |
| FIN3384MTD   | MTD56          | 56-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 6.1mm Wide |
| FIN3385MTD   | MTD56          | 56-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 6.1mm Wide |
| FIN3386MTD   | MTD56          | 56-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 6.1mm Wide |

Devices also available in Tape and Reel. Specify by appending suffix letter "X" to the ordering code.

TABLE 1. Display Panel Link Serializers/Deserializers Chip Matrix

| Part    | CLK Frequency | LVTTTL IN | LVDS OUT | LVDS IN | LVTTTL OUT | Package  |
|---------|---------------|-----------|----------|---------|------------|----------|
| FIN3385 | 85            | 28        | 4        |         |            | 56 TSSOP |

## Transmitter and Receiver Power-Up/Power-Down Operation Truth Table

The outputs of the transmitter remain in the High-Impedance state until the power supply reaches 2V. The following table shows the operation of the transmitter during power-up and power-down and operation of the PwrDn pin.

| Transmitter |                 |     | PwrDn    | Normal |          |          |          |
|-------------|-----------------|-----|----------|--------|----------|----------|----------|
|             | V <sub>CC</sub> | <2V | >2V      | >2V    | >2V      | >2V      | >2V      |
|             | TxIn            | X   | X        | Active | Active   |          |          |
|             | TxOut           | Z   | Z        | Active | X        |          |          |
|             | TxCLKIn         | X   | X        | Active | H/L/Z    |          |          |
|             | TxCLKOut±       | Z   | Z        | Active | (Note 3) |          |          |
|             | PwrDn           | L   | L        | H      | H        | H        | H        |
| Receiver    |                 |     | PwrDn    |        |          |          |          |
|             | RxIn±           | X   | X        | Active | Active   | (Note 4) | (Note 4) |
|             | RxOut           | Z   | L        | L/H    | P        | H        | P        |
|             | RxCLKIn±        | X   | X        | Active | (Note 4) | Active   | (Note 4) |
|             | RxCLKOut        | Z   | (Note 5) | Active | (Note 5) | (Note 5) | (Note 5) |
|             | PwrDn           | L   | L        | H      | H        | H        | H        |
|             | V <sub>CC</sub> | <2V | <2V      | <2V    | <2V      | <2V      | <2V      |

H = HIGH Logic Level  
 L = LOW Logic Level  
 P = Last Valid State  
 X = Don't Care  
 Z = High-Impedance

**Note 3:** If the transmitter is powered up and PwrDn is inactive HIGH and the clock input goes to any state LOW, HIGH, or Z then the internal PLL will go to a known low frequency and stay until the clock starts normal operation again.

**Note 4:** If the input is terminated and un-driven (Z) or shorted or open. (fail safe condition)

**Note 5:** For PwrDn or fail safe condition the RxCLKOut pin will go LOW for Panel Link devices and HIGH for Channel Link devices.

**Note 6:** Shorted here means (± inputs are shorted to each other, or ± inputs are shorted to each other and Ground or V<sub>CC</sub>, or either ± inputs are shorted to Ground or V<sub>CC</sub>) with no other Current/Voltage sources (noise) applied. If the V<sub>ID</sub> is still in the valid range (greater than 100mV) and VCM is in the valid range (0V to 2.4V) then the input signal is still recognized and the part will respond normally.

**Absolute Maximum Ratings**(Note 7)

|                                                      |                 |
|------------------------------------------------------|-----------------|
| Power Supply Voltage ( $V_{CC}$ )                    | -0.3V to +4.6V  |
| TTL/CMOS Input/Output Voltage                        | -0.5V to +4.6V  |
| LVDS Input/Output Voltage                            | -0.3V to +4.6V  |
| LVDS Output Short Circuit Current ( $I_{OSD}$ )      | Continuous      |
| Storage Temperature Range ( $T_{STG}$ )              | -65°C to +150°C |
| Maximum Junction Temperature ( $T_J$ )               | 150°C           |
| Lead Temperature ( $T_L$ )<br>(Soldering, 4 seconds) | 260°C           |
| ESD Rating (HBM, 1.5 k $\Omega$ , 100 pF)            |                 |
| I/O to GND                                           | >10.0 kV        |
| All Pins                                             | >6.5 kV         |
| ESD Rating (MM, 0 $\Omega$ , 200 pF)                 | >400V           |

**Recommended Operating Conditions**

|                                                 |                                |
|-------------------------------------------------|--------------------------------|
| Supply Voltage ( $V_{CC}$ )                     | 3.0V to 3.6V                   |
| Operating Temperature ( $T_A$ )(Note 7)         | -10°C to +70°C                 |
| Maximum Supply Noise Voltage<br>( $V_{CCNPP}$ ) | 100 mV <sub>P-P</sub> (Note 8) |

**Note 7:** Absolute maximum ratings are DC values beyond which the device may be damaged or have its useful life impaired. The datasheet specifications should be met, without exception, to ensure that the system design is reliable over its power supply, temperature, and output/input loading variables. Fairchild does not recommend operation outside datasheet specifications.

**Note 8:** 100mV  $V_{CC}$  noise should be tested for frequency at least up to 2 MHz. All the specification below should be met under such a noise.

**Transmitter DC Electrical Characteristics**

Over supply voltage and operating temperature ranges, unless otherwise specified. (Note 9)

**Note 9:** All Typical values are at  $T_A = 25^\circ\text{C}$  and with  $V_{CC} = 3.3$  V.

**Note 10:** Positive current values refer to the current flowing into device and negative values means current flowing out of pins. Voltage are referenced to ground unless otherwise specified (except  $\Delta V_{OD}$  and  $V_{OD}$ ).

**Note 11:** The power supply current for both transmitter and receiver can be different with the number of active I/O channels.

**Note 12:** The 16-grayscale test pattern tests device power consumption for a "typical" LCD display pattern. The test pattern approximates signal switching needed to produce groups of 16 vertical strips across the display.

## Transmitter AC Electrical Characteristics

Over supply voltage and operating temperature ranges, unless otherwise specified.

| t <sub>TPLLS</sub>                                    | Transmitter Phase Lock Loop Set Time (Note 15)           | See Figure 22, (Note 14)                                |         |      | 10.0    | ms    |

**Note 13:** Outputs of all transmitters stay in 3-STATE until power reaches 2V. Both clock and data output begins to toggle 10ms after V<sub>CC</sub> reaches 3V and Power-Down pin is above 1.5V.

**Note 14:** This output data pulse position works for TTL inputs except the LVDS output bit mapping difference (see Figure 14). Figure 16 shows the skew between the first data bit and clock output. Also 2-bit cycle delay is guaranteed when the MSB is output from transmitter.

**Note 15:** This jitter specification is based on the assumption that PLL has a ref clock with cycle-to-cycle input jitter less than 2ns.

## Receiver DC Electrical Characteristics

Over supply voltage and operating temperature ranges, unless otherwise specified. (Note 16)

**Note 16:** All Typical values are at  $T_A = 25^\circ\text{C}$  and with  $V_{CC} = 3.3$  V. Positive current values refer to the current flowing into device and negative values means current flowing out of pins. Voltage are referenced to ground unless otherwise specified (except  $\Delta V_{OD}$  and  $V_{OD}$ ).

**Note 17:** The power supply current for the receiver can be different with the number of active I/O channels.

**Note 18:** Total channel latency from Serializer to deserializer is (T +  $t_{RCCD}$ ). There is the clock period.

**Note 19:** Receiver skew margin is defined as the valid sampling window after considering potential setup/hold time and minimum/maximum bit position.

## Receiver AC Electrical Characteristics (66MHz)

| $t_{RSPB4}$ | Receiver Input Strobe Position of Bit 4    |                                                                                 | 9.5  | 9.9  | 10.2 | ns            |
| $t_{RSPB5}$ | Receiver Input Strobe Position of Bit 5    |                                                                                 | 11.7 | 12.1 | 12.4 | ns            |
| $t_{RSPB6}$ | Receiver Input Strobe Position of Bit 6    |                                                                                 | 13.9 | 14.3 | 14.6 | ns            |
| $t_{RSKM}$  | RxIn Skew Margin                           | f = 40 MHz                                                                      | 490  |      |      | ps            |
|             | See Figure 17, (Note 22)                   | f = 66 MHz                                                                      | 400  |      |      |               |
| $t_{RPLLS}$ | Receiver Phase Lock Loop Set Time          | See Figure 11                                                                   |      |      | 10.0 | ms            |

**Note 20:** For the receiver with falling-edge strobe, the definition of setup/hold time will be slightly different from the one with rising-edge strobe. The clock reference point is the time when the clock falling edge passes through 2V. For hold time  $t_{RHRC}$ , the clock reference point is the time when falling edge passes through +0.8V.

**Note 21:** Total channel latency from Serializer to deserializer is  $(T + t_{TCCD}) + (2 \cdot T + t_{RCCD})$ . There is the clock period.

**Note 22:** Receiver skew margin is defined as the valid sampling window after considering potential setup/hold time and minimum/maximum bit position.

FIGURE 1. Differential LVDS Output DC Test Circuit

**Note A:** For all input pulses,  $t_R$  or  $t_F \leq 1$  ns.

**Note B:**  $C_L$  includes all probe and jig capacitance.

FIGURE 2. Differential Receiver Voltage Definitions and Propagation Delay and Transition Time Test Circuit

| 0                       | 0.6      | -600                                         | 0.3                                        |

## AC Loading and Waveforms

**Note:** The worst case test pattern produces a maximum toggling of digital circuits, LVDS I/O and LVTTL/CMOS I/O. Depending on the valid strobe edge of transmitter, the TxCLKIn can be either rising or falling edge data strobe.

FIGURE 3. "Worst Case" Test Pattern

FIGURE 4. Transmitter LVDS Output Load and Transition Times

FIGURE 5. Transmitter Setup/Hold and HIGH/LOW Times (Rising Edge Strobe)

FIGURE 6. Transmitter Input Clock Transition Time

## AC Loading and Waveforms (Continued)

FIGURE 7. Transmitter Outputs Channel-to-Channel Skew

Note: For the receiver with falling-edge strobe, the definition of setup/hold time will be slightly different from the one with rising-edge strobe. The clock reference point is the time when the clock falling edge passes through 2V. For hold time  $t_{RHRC}$ , the clock reference point is the time when falling edge passes through +0.8V.

FIGURE 11. Receiver Phase Lock Loop Set Time

FIGURE 12. Transmitter Power-Down Delay

FIGURE 13. Receiver Power-Down Delay

## AC Loading and Waveforms (Continued)

**Note:** The information in this diagram shows the relationship between clock out and the first data bit. A 2-bit cycle delay is guaranteed when the MSB is output from the transmitter.

**FIGURE 14. 28 Parallel LVTTTL Inputs Mapped to 4 Serial LVDS Outputs**

**Note:** This output data pulse position works for both transmitter with 28 or 21 TTL inputs except the LVDS output bit mapping difference. All the information in this diagram tells that the skew between the first data bit and clock output. Also 2-bit cycle delay is guaranteed when the MSB is output from transmitter.

**FIGURE 15. 21 Parallel LVTTTL Inputs Mapped to 3 Serial LVDS Outputs**

## AC Loading and Waveforms (Continued)

FIGURE 16. Transmitter Output Pulse Bit Position

FIGURE 17. Receiver Input Bit Position

## AC Loading and Waveforms (Continued)

**Note:**  $t_{RSKM}$  is the budget for the cable skew and source clock skew plus ISI (Inter-Symbol Interference).

**Note:** The minimum and maximum pulse position values are based on the bit position of each of the 7 bits within the LVDS data stream across PVT (Process, Voltage Supply, and Temperature).

**FIGURE 18. Receiver LVDS Input Skew Margin**

**Note:** Test setup used considers no requirement for separation of RMS and deterministic jitter. Other hardware setup such as Wavecrest boxes can be used if no M1 software is available, but the test methodology in Figure 20 should be followed.

**FIGURE 19. Transmitter Clock Out Jitter Measurement Setup**

**Note:** This jitter pattern is used to test the jitter response (Clock Out) of the device over the power supply range with worst jitter  $\pm 3$ ns (cycle-to-cycle) clock input. The specific test methodology is as follows:

- Switching input data TxIn0 to TxIn20 at 0.5 MHz, and the input clock is shifted to left  $-3$ ns and to the right  $+3$ ns when data is HIGH.
- The  $\pm 3$  ns cycle-to-cycle input jitter is the static phase error between the two clock sources. Jumping between two clock sources to simulate the worst case of clock edge jump (3 ns) from graphical controllers. Cycle-to-cycle jitter at TxCLK out pin should be measured cross  $V_{CC}$  range with 100mV noise ( $V_{CC}$  noise frequency  $< 2$  MHz).

**FIGURE 20. Timing Diagram of Transmitter Clock Input with Jitter**

## AC Loading and Waveforms (Continued)

| Device Pin Name    | Signal  | Signal Pattern | Signal Frequency   |
|--------------------|---------|----------------|--------------------|
| TxCLKIn / RxCLKOut | Dot CLK |                | $f$                |
| TxIn0 / RxOut0     | R0      |                | $f / 16$           |
| TxIn1 / RxOut1     | R1      |                | $f / 8$            |
| TxIn2 / RxOut2     | R2      |                | $f / 4$            |
| TxIn3 / RxOut3     | R3      |                | $f / 2$            |
| TxIn4 / RxOut4     | R4      |                | Steady State, LOW  |

56-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 6.1mm Wide  
Package Number MTD56

Fairchild does not assume any responsibility for use of any circuitry described, no circuit patent licenses are implied and Fairchild reserves the right at any time without notice to change said circuitry and specifications.

### LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
