

### ORDERING INFORMATION

Part Number	Package	Top Marking	Free Air Temperature (T <sub>A</sub> )
MP8001DS*	SOIC-8	MP8001DS	-40°C to +85°C
MP8001ADS**	SOIC-8	MP8001A	-40°C to +85°C

\* For Tape & Reel, add suffix -Z (e.g. MP8001DS-Z).  
 For RoHS compliant packaging, add suffix -LF (e.g. MP8001DS-LF-Z)

\*\* For Tape & Reel, add suffix -Z (e.g. MP8001ADS-Z).  
 For RoHS compliant packaging, add suffix -LF (e.g. MP8001ADS-LF-Z)

### PACKAGE REFERENCE

#### ABSOLUTE MAXIMUM RATINGS <sup>(1)</sup>

V <sub>DD</sub> , RTN	-0.3V to +100V
PG, DET	-0.3V to +57V
I <sub>LIM</sub>	-0.3V to +7V
CLASS	-0.3V to +12V
Continuous Power Dissipation(T <sub>A</sub> = +25°C) <sup>(2)</sup>	1.19W
Junction Temperature	150°C
Lead Temperature	260°C
Storage Temperature	-65°C to +150°C

#### Recommended Operating Conditions <sup>(3)</sup>

Supply Voltage V <sub>IN</sub>	0V to 57V
Output Current I <sub>OUT</sub>	0 to 0.4A
Operating Temperature	-40°C to +85°C
Junction Temperature	-40°C to +125°C

#### Thermal Resistance <sup>(4)</sup>

	$\theta_{JA}$	$\theta_{JC}$
SOIC-8	105	50

#### Notes:

- Exceeding these ratings may damage the device.
- The maximum allowable power dissipation is a function of the maximum junction temperature T<sub>J</sub> (MAX), the junction-to-ambient thermal resistance  $\theta_{JA}$ , and the ambient temperature T<sub>A</sub>. The maximum allowable continuous power dissipation at any ambient temperature is calculated by P<sub>D</sub> (MAX) = (T<sub>J</sub> (MAX)-T<sub>A</sub>)/ $\theta_{JA}$ . Exceeding the maximum allowable power dissipation will cause excessive die temperature, and the regulator will go into thermal shutdown. Internal thermal shutdown circuitry protects the device from permanent damage.
- The device is not guaranteed to function outside of its operating conditions.
- Measured on JESD51-7, 4-layer PCB.

## ELECTRICAL CHARACTERISTICS

$V_{DD} = 48V$ , all voltages with respect to  $V_{SS}$ ,  $V_{SS} = 0V$ ;  $R_{DET} = 26.1k\Omega$ ,  $R_{CLASS} = 4.42k\Omega$ ,  $R_{ILIM} = 178k\Omega$ ,  $T_A = 25^\circ C$ , unless otherwise noted.

Parameter	Symbol	Condition	Min	Typ	Max	Units	
<b>Detection</b>							
Detection on	$V_{DET\_ON}$	$V_{DD}=V_{RTN}=V_{PG}=1.9V$		1.9		V	
Detection off	$V_{DET\_OFF}$	$V_{DD}=V_{RTN}=V_{PG}=11V$		11		V	
Detection on/off Hysteresis	$V_{DET\_H}$	Falling below 11V on Threshold		0.2		V

## PIN FUNCTIONS

Pin #	Name	Description
1	ILIM	Startup $I_{LIM}$ Value Set (optional at this point).
2	CLASS	Classification Resistor.
3	DET	26.1k $\Omega$ Detection Resistor.
4	VSS	Negative Power Supply Terminal.
5	RTN	Powered Device Negative Power Terminal.
6	PG	Power Good Indicator.
7	NC	No Connect. Possible post-package trim input.
8	VDD	Positive Power Supply Terminal.

## OPERATION

The MP8001/MP8001A operate in the manner described here and in the IEEE 802.3af Powered Device (PD) Specifications. These devices (along with the power sourcing element (PSE)) operate as a safety device to supply potentially lethal voltages only when the power sourcing element recognizes a unique, tightly specified resistance at the end of an unknown length of Ethernet cable.

A 26.1k $\Omega$  resistance is presented as a load to the PSE in Detection Mode, when the PSE applies two “safe” voltages of less than 10.1V each while measuring the change in current drawn in order to determine the load resistance. If the PSE “sees” the correct load, then it may either further increase the applied voltage to enter the “classification” range of operation or switch on the nominal 48V power to the load.

The classification mode can further specify to the PSE the expected load range of the device under power so that the PSE can intelligently distribute power to as many loads as possible (within its maximum current capabilities). If a classification resistance is not present, the PD load is assumed to be the maximum of approximately 13 Watts. The classification mode is active between 14.5V and 20.5V.

The main power switch will pass a limited current above 31V, charging the external DC-to-DC converter’s input capacitor in a controlled manner. The charging will continue until the controlled current drops below the either an externally programmed limiting level or 420mA/810mA, depending upon the  $R_{lim}$  current setting resistor. The main power switch is internally thermally protected to 135°C by reducing the output current using a foldback technique. The required power dissipation of the IC drops from the allowed peak value of 24W (420mA x 57V) to 0.18W  $((420mA)^2 \times R_{ON})$  during the normal operation at turn-on. The minimum allowed capacitance of 5 $\mu$ F will charge in 500 $\mu$ s. A larger capacitor will take a proportionally longer time to charge due to the constant current charging method. If a capacitor that is too large will overheat the part and force it into thermal shutdown. The IC will reattempt charging for a number of cycles but ultimately will be shut down until the input voltage from the PSE is recycled. This is the way the IC protects itself under overload and/or shorted conditions.

**SIDE VIEW**

**DETAIL "A"**

**NOTE:**

- 1) CONTROL DIMENSION IS IN INCHES. DIMENSION IN BRACKET IS IN MILLIMETERS.
- 2) PACKAGE LENGTH DOES NOT INCLUDE MOLD FLASH, PROTRUSIONS OR GATE BURRS.
- 3) PACKAGE WIDTH DOES NOT INCLUDE INTERLEAD FLASH OR PROTRUSIONS.
- 4) LEAD COPLANARITY (BOTTOM OF LEADS AFTER FORMING) SHALL BE 0.004" INCHES MAX.
- 5) DRAWING CONFORMS TO JEDEC MS-012, VARIATION AA.
- 6) DRAWING IS NOT TO SCALE.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
