11.1 Land pattern designing

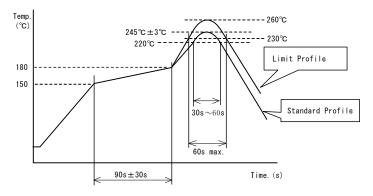

11.2 Flux, Solder

- ·Use rosin-based flux.
- Don't use highly acidic flux with halide content exceeding 0.2(wt) % (chlorine conversion value).
- Don't use water-soluble flux.
- •Use Sn-3.0Ag-0.5Cu solder.
- •Standard thickness of solder paste: $100 \,\mu$ m to $200 \,\mu$ m.

11.3 Reflow soldering conditions

- •Pre-heating should be in such a way that the temperature difference between solder and product surface is limited to 150°C max. Cooling into solvent after soldering also should be in such a way that the temperature difference is limited to 100°C max.
- Insufficient pre-heating may cause cracks on the product, resulting in the deterioration of products quality.
- Standard soldering profile and the limit soldering profile is as follows.
- The excessive limit soldering conditions may cause leaching of the electrode and/or resulting in the deterioration of product quality.

Soldering Profile for Lead Free solder

	Standard Profile	Limit Profile
Pre-heating	150°C~180°C, 90s±30s	
Heating	above 220°C, 30s~60s	above 230°C, 60s max.

11.4 Reworking with soldering iron

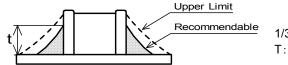

The following conditions must be strictly followed when using a soldering iron.

Pre-heating	150°C, 1 min
Tip temperature	350°C max.
Soldering iron output	80W max.
Tip diameter	ϕ 3mm max.
Soldering time	3(+1, -0)s
Time	2 times

Note :Do not directly touch the products with the tip of the soldering iron in order to prevent the crack on the ferrite material due to the thermal shock.

11.5 Solder Volume

- ·Solder shall be used not to be exceeded the upper limits as shown below.

11.8 Resin coating

The impedance value may change and/or it may affect on the product's performance due to high cure-stress of resin to be used for coating/molding products. So please pay your careful attention when you select resin.

In prior to use, please make the reliability evaluation with the product mounted in your application set.

11.9 Caution for use

There is possibility that the impedance value change due to magnetism. Don't use a magnet or a pair of tweezers with magnetism when chip noise filters are handled. (The tip of the tweezers should be molded with resin or pottery.)

11.10 Handling of a substrate

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate.

Excessive mechanical stress may cause cracking in the product.

Bending

Twisting
