

A. HE89A21 Introduction

HE8A21 is a member of 8-bit Micro-controller series used for telephone communication developed by King Billion Electronics Ltd. Users can chose any one of combination among 【128 dots LCD Driver + 16 Bit I/O Port】... 【64 dots LCD Driver + 32 Bit I/O Port】etc. This Also built-in a DTMF generator can generate the PSTN dialing tone directly. It can be applicable as Small/ Medium class telephone communication product etc..

The instruction set of HE89A21 are quite easy to learn and simple to use. Only about thirty instructions with four-type addressing mode are provided. Most of instructions take only 3 oscillator clocks (machine cycles). The processing power is enough to most of battery operation system.

B. HE89A21 Features

- Operation Voltage : 2.4V – 5.5V
- System Clock : DC ~ 8MHz @ 5.0V

- Instruction set : 32 instructions, 4 addressing mode. 9-bit DATA POINTER for RAM and 14-bit TABLE POINTER for ROM.

C. Internal Block

Please always take in mind that ICE is different from IC. ICE is the whole set of HE80000 series IC, but each IC is a subset of ICE. Never use any hardware resource that real IC didn't have, especially RAM and register. KBIDS and compiler cannot prevent user to use some hardware resource that didn't exist. Please check the following table and refer the abbreviation in HE80000 user's manual.

I. Application Circuit

No External Parts is necessary if user adopt Internal Fast RC Clock

External Fast Clock: Crystal osc.

External Fast Clock: RC osc.

External Slow Clock: Crystal osc.

External Slow Clock: RC osc.

J. Important Note

1. LCD driving circuit must be turn off before IC goes into sleep mode.
2. Please bonds the TSTP_P, RSTP_N and PRTD[7:0] with test point on PCB (can be soldered and probed) as you can, then KB can do some IC testing job on PCB. Neither VDD nor GND connection is necessary for TSTP_P. The following figure is an example (Testing point with through hole).
