ADC1415S series

Single 14-bit ADC; 65 Msps, 80 Msps, 105 Msps or 125 Msps with input buffer; CMOS or LVDS DDR digital outputs

Rev. 4 — 17 December 2010 Product data sheet

1. General description

The ADC1415S is a single channel 14-bit Analog-to-Digital Converter (ADC) optimized for high dynamic performance and low power consumption at sample rates up to 125 Msps. Pipelined architecture and output error correction ensure the ADC1415S is accurate enough to guarantee zero missing codes over the entire operating range. Supplied from a single 3 V source, it can handle output logic levels from 1.8 V to 3.3 V in CMOS mode, thanks to a separate digital output supply.

The ADC1415S supports the Low Voltage Differential Signalling (LVDS) Double Data Rate (DDR) output standard. An integrated Serial Peripheral Interface (SPI) allows the user to easily configure the ADC.

The device also includes a SPI programmable full-scale to allow flexible input voltage range from 1 V to 2 V (peak-to-peak). With excellent dynamic performance from the baseband to input frequencies of 170 MHz or more, the ADC1415S is ideal for use in communications, imaging and medical applications - especially in high Intermediate Frequency (IF) applications thanks to the integrated input buffer. The input buffer ensures that the input impedance remains constant and low and the performance consistent over a wide frequency range.

2. Features and benefits

- SNR, 72 dBFS; SFDR, 86 dBc
- Sample rate up to 125 Msps
- 14-bit pipelined ADC core
- Clock input divided by 2 for less jitter contribution
- Integrated input buffer
- Flexible input voltage range: 1 V (p-p) to 2 V (p-p)
- CMOS or LVDS DDR digital outputs
- Pin compatible with ADC1215S series, ADC1015S series and the ADC1115S125
- Input bandwidth, 600 MHz
- Power dissipation, 635 mW at 80 Msps, including analog input buffer
- Serial Peripheral Interface (SPI)
- Duty cycle stabilizer
- Fast OuT-of-Range (OTR) detection
- Offset binary, two’s complement, gray code
- Power-down mode and Sleep mode
- HVQFN40 package

3. Applications

- Wireless and wired broadband communications
- Portable instrumentation
- Imaging systems
- Digital predistortion loop, power amplifier linearization
- Spectral analysis
- Ultrasound equipment
- Software defined radio

4. Ordering information

Table 1. Ordering information

Type number	f_s (Msps)	Package		
		Name	Description	Version
ADC1415S125HN/C1	125	HVQFN40	plastic thermal enhanced very thin quad flat package; no leads; 40 terminals; body 6 × 6 × 0.85 mm	SOT618-6
ADC1415S105HN/C1	105	HVQFN40	plastic thermal enhanced very thin quad flat package; no leads; 40 terminals; body 6 × 6 × 0.85 mm	SOT618-6
ADC1415S080HN/C1	80	HVQFN40	plastic thermal enhanced very thin quad flat package; no leads; 40 terminals; body 6 × 6 × 0.85 mm	SOT618-6

Table 2. Pin description (CMOS digital outputs)

Symbol	Pin	Type[1]	Description
REFB	1	O	bottom reference
REFT	2	O	top reference
AGND	3	G	analog ground
VCM	4	O	common-mode output voltage
VDDA5V	5	P	5 V analog power supply
AGND	6	G	analog ground
INM	7	I	complementary analog input
INP	8	I	analog input
AGND	9	G	analog ground
VDDA3V	10	P	3 V analog power supply
VDDA3V	11	P	3 V analog power supply
CLKP	12	I	clock input
CLKM	13	I	complementary clock input
DEC	14	O	regulator decoupling node
$\overline{OE}$	15	I	output enable, active LOW
PWD	16	I	power down, active HIGH

Table 2. Pin description (CMOS digital outputs) *...continued*

Symbol	Pin	Type[1]	Description
D13	17	O	data output bit 13 (Most Significant Bit (MSB))
D12	18	O	data output bit 12
D11	19	O	data output bit 11
D10	20	O	data output bit10
D9	21	O	data output bit 9
D8	22	O	data output bit 8
D7	23	O	data output bit 7
D6	24	O	data output bit 6
D5	25	O	data output bit 5
D4	26	O	data output bit 4
D3	27	O	data output bit 3
D2	28	O	data output bit 2
D1	29	O	data output bit 1
D0	30	O	data output bit 0 (Least Significant Bit (LSB))
DAV	31	O	data valid output clock
n.c.	32	-	not connected
VDDO	33	P	output power supply
OGND	34	G	output ground
OTR	35	O	out of range
SCLK/DFS	36	I	SPI clock / data format select
SDIO/ODS	37	I/O	SPI data IO / output data standard
$\overline{CS}$	38	I	SPI chip select
SENSE	39	I	reference programming pin
VREF	40	I/O	voltage reference input/output

[1] P: power supply; G: ground; I: input; O: output; I/O: input/output.

Table 3. Pin description (LVDS DDR) digital outputs)

Symbol	Pin[1]	Type[2]	Description
D12_D13_M	17	O	differential output data D12 and D13 multiplexed, complement
D12_D13_P	18	O	differential output data D12 and D13 multiplexed, true
D10_D11_M	19	O	differential output data D10 and D11 multiplexed, complement
D10_D11_P	20	O	differential output data D10 and D11 multiplexed, true
D8_D9_M	21	O	differential output data D8 and D9 multiplexed, complement
D8_D9_P	22	O	differential output data D8 and D9 multiplexed, true
D6_D7_M	23	O	differential output data D6 and D7 multiplexed, complement
D6_D7_P	24	O	differential output data D6 and D7 multiplexed, true
D4_D5_M	25	O	differential output data D4 and D5 multiplexed, complement
D4_D5_P	26	O	differential output data D4 and D5 multiplexed, true
D2_D3_M	27	O	differential output data D2 and D3 multiplexed, complement
D2_D3_P	28	O	differential output data D2 and D3 multiplexed, true
D0_D1_M	29	O	differential output data D0 and D1 multiplexed, complement

Table 3. Pin description *...continued* **(LVDS DDR) digital outputs)**

Symbol	Pin[1]	Type[2]	Description
D0_D1_P	30	O	differential output data D0 and D1 multiplexed, true
DAVM	31	O	data valid output clock, complement
DAVP	32	O	data valid output clock, true

[1] Pins 1 to 16 and pins 33 to 40 are the same for both CMOS and LVDS DDR outputs (see Table 2)

[2] P: power supply; G: ground; I: input; O: output; I/O: input/output.

7. Limiting values

Table 4. Limiting values

In accordance with the Absolute Maximum Rating System (IEC 60134).

Symbol	Parameter	Conditions	Min	Max	Unit
V_O	output voltage	pins D13 to D0 or pins D12_D13_P to D0_D1_P and D12_D13_M to D0_D1_M	–0.4	+3.9	V
$V_{DDA(3V)}$	analog supply voltage 3 V	on pin VDDA3V	–0.4	+4.6	V
$V_{DDA(5V)}$	analog supply voltage 5 V	on pin VDDA5V	–0.5	+6.0	V
V_{DDO}	output supply voltage		–0.4	+4.6	V
T_{stg}	storage temperature		–55	+125	°C
T_{amb}	ambient temperature		–40	+85	°C
T_j	junction temperature		-	125	°C

8. Thermal characteristics

Table 5. Thermal characteristics

Symbol	Parameter	Conditions		Typ	Unit
$R_{th(j-a)}$	thermal resistance from junction to ambient		[1]	30.5	K/W
$R_{th(j-c)}$	thermal resistance from junction to case		[1]	13.3	K/W

[1] Value for six layers board in still air with a minimum of 25 thermal vias.

9. Static characteristics

Table 6. Static characteristics[1]

11. Application information

11.1 Device control

The ADC1415S can be controlled via the Serial Peripheral Interface (SPI control mode) or directly via the I/O pins (Pin control mode).

11.1.1 SPI and Pin control modes

The device enters Pin control mode at power-up, and remains in this mode as long as pin $\overline{CS}$ is held HIGH. In Pin control mode, the SPI pins SDIO, $\overline{CS}$ and SCLK are used as static control pins.

SPI control mode is enabled by forcing pin $\overline{CS}$ LOW. Once SPI control mode has been enabled, the device remains in this mode. The transition from Pin control mode to SPI control mode is illustrated in Figure 13.

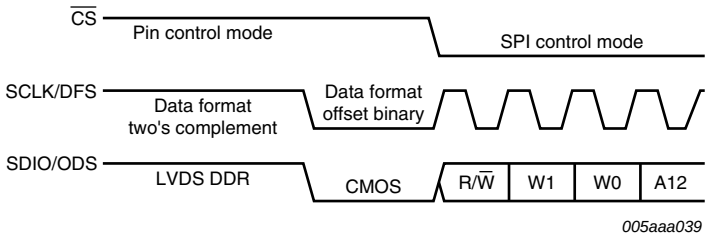

Fig 13. Control mode selection.

When the device enters SPI control mode, the output data standard and data format are determined by the level on pin SDIO as soon as a transition is triggered by a falling edge on $\overline{CS}$.

11.1.2 Operating mode selection

The active ADC1415S operating mode (Power-up, Power-down or Sleep) can be selected via the SPI interface (see Table 19) or using pins PWD and $\overline{OE}$ in Pin control mode, as described in Table 10.

Table 10. Operating mode selection via pin PWD and $\overline{OE}$

Pin PWD	Pin $\overline{OE}$	Operating mode	Output high-Z
0	0	Power-up	no
0	1	Power-up	yes
1	0	Sleep	yes
1	1	Power-down	yes

11.1.3 Selecting the output data standard

The output data standard (CMOS or LVDS DDR) can be selected via the SPI interface (see Table 23) or using pin ODS in Pin control mode. LVDS DDR is selected when ODS is HIGH, otherwise CMOS is selected.

11.1.4 Selecting the output data format

The output data format can be selected via the SPI interface (offset binary, two's complement or gray code; see Table 23) or using pin DFS in Pin control mode (offset binary or two's complement). Offset binary is selected when DFS is LOW. When DFS is HIGH, two's complement is selected.

11.2 Analog inputs

11.2.1 Input stage

The analog input of the ADC1415S supports a differential or a single-ended input drive. Optimal performance is achieved using differential inputs. The ADC inputs are internally biased and need to be decoupled.

The full-scale analog input voltage range is configurable between 1 V (p-p) and 2 V (p-p) via a programmable internal reference (see Section 11.3 and Table 21).

The equivalent circuit of the input buffer followed by the Sample and Hold (S/H) input stage, including ElectroStatic Discharge (ESD) protection and circuit and package parasitics, is shown in Figure 14.

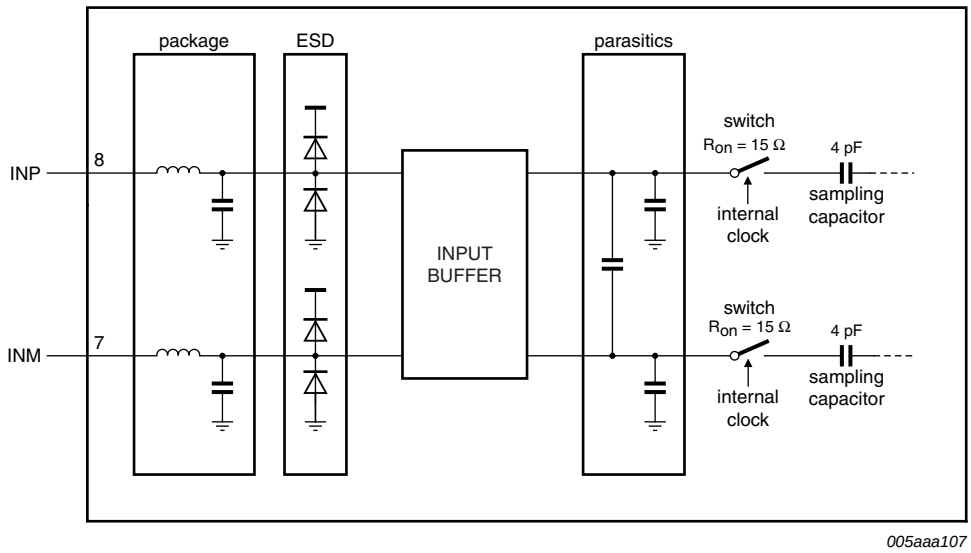

Fig 14. Input sampling circuit and input buffer

The integrated input buffer offers the following advantages:

- The kickback effect is avoided - the charge injection and glitches generated by the S/H input stage are isolated from the input circuitry. So there's no need for additional filtering.
- The input capacitance is very low and constant over a wide frequency range, which makes the ADC1415S easy to drive.

The sample phase occurs when the internal clock (derived from the clock signal on pin CLKP/CLKM) is HIGH. The voltage is then held on the sampling capacitors. When the clock signal goes LOW, the stage enters the hold phase and the voltage information is transmitted to the ADC core.

11.2.2 Transformer

The configuration of the transformer circuit is determined by the input frequency. The configuration shown in Figure 15 would be suitable for a baseband application.

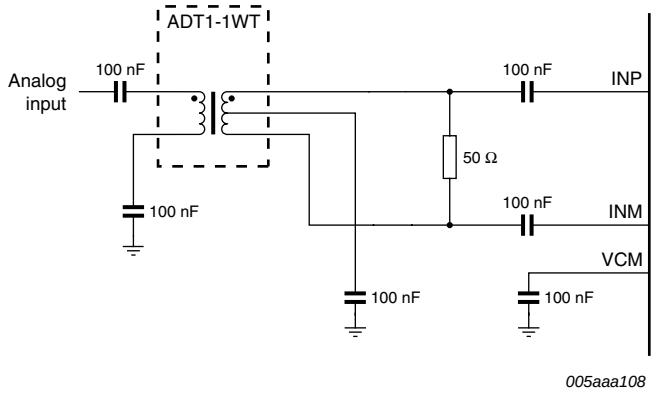

Fig 15. Single transformer configuration suitable for baseband applications

The configuration shown in Figure 16 is recommended for high frequency applications. In both cases, the choice of transformer is a compromise between cost and performance.

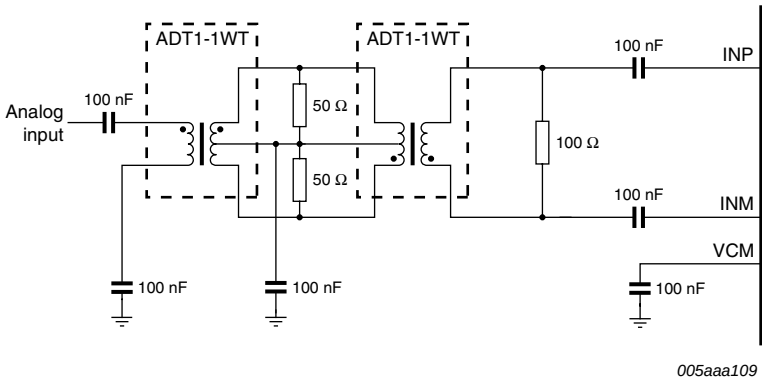

Fig 16. Dual transformer configuration suitable for high intermediate frequency application

11.3 System reference and power management

11.3.1 Internal/external references

The ADC1415S has a stable and accurate built-in internal reference voltage to adjust the ADC full-scale. This reference voltage can be set internally via SPI or with pins VREF and SENSE (programmable in 1 dB steps between 0 dB and −6 dB via control bits INTREF[2:0] when bit INTREF_EN = logic 1; see Table 21) See Figure 18 to Figure 21. The equivalent reference circuit is shown in Figure 17. External reference is also possible by providing a voltage on pin VREF as described in Figure 20.

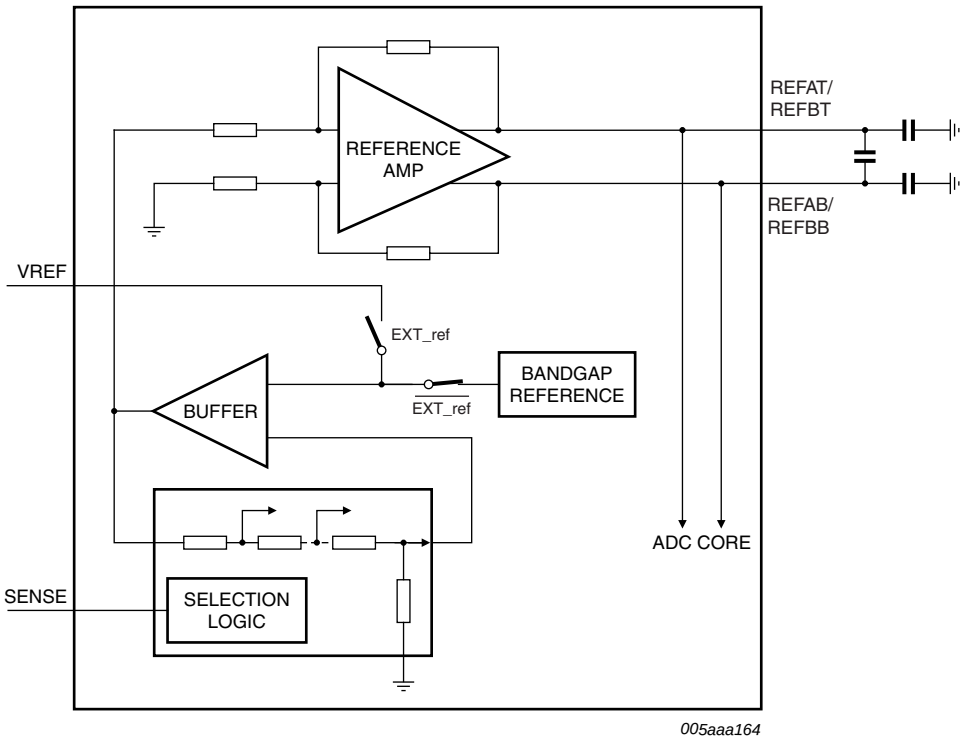

Fig 17. Reference equivalent schematic

If bit INTREF_EN is set to logic 0, the reference voltage is determined either internally or externally as detailed in Table 11.

Table 11. Reference selection

Selection	SPI bit INTREF_EN	SENSE pin	VREF pin	Full-scale (p-p)
internal (Figure 18)	0	AGND	330 pF capacitor to AGND	2 V
internal (Figure 19)	0	pin VREF connected to pin SENSE and via a 330 pF capacitor to AGND		1 V
external (Figure 20)	0	$V_{DDA(3V)}$	external voltage between 0.5 V and 1 V[1]	1 V to 2 V
internal via SPI (Figure 21)	1	pin VREF connected to pin SENSE and via 330 pF capacitor to AGND		1 V to 2 V

[1] The voltage on pin VREF is doubled internally to generate the internal reference voltage.

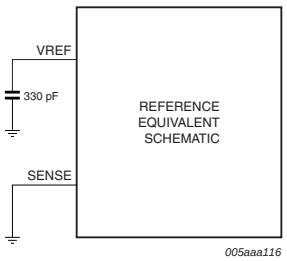

Fig 18. Internal reference, 2 V (p-p) full scale

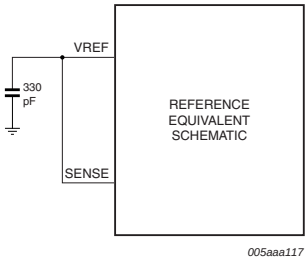

Fig 19. Internal reference, 1 V (p-p) full scale

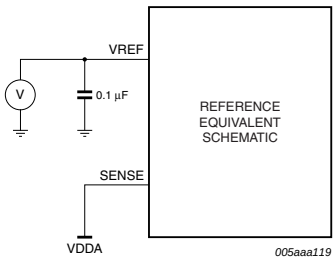

Fig 20. External reference, 1 V (p-p) to 2 V (p-p) full-scale

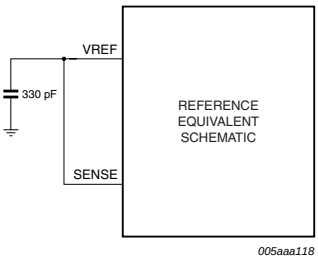

Fig 21. Internal reference via SPI, 1 V (p-p) to 2 V (p-p) full-scale

Figure 18 to Figure 21 illustrate how to connect the SENSE and VREF pins to select the required reference voltage source.

11.3.2 Programmable full-scale

The full-scale is programmable between 1 V (peak-to-peak) to 2 V (peak-to-peak) (see Table 12).

Table 12. Reference SPI Gain Control

INTREF	Gain	Full-scale (p-p)
000	0 dB	2 V
001	−1 dB	1.78 V
010	−2 dB	1.59 V
011	−3 dB	1.42 V
100	−4 dB	1.26 V
101	−5 dB	1.12 V
110	−6 dB	1 V
111	reserved	x

11.3.3 Common-mode output voltage ($V_{O(cm)}$)

A 0.1 µF filter capacitor should be connected between pin VCM and ground.

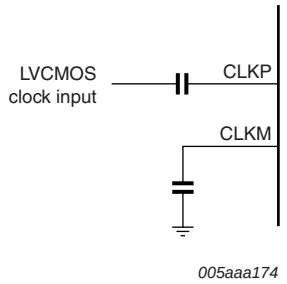
11.3.4 Biasing

The common-mode input voltage ($V_{I(cm)}$) on pins INP and INM is set internally. The input buffer bias current can be set to one of three levels (high, medium or low) via the SPI (see Table 22).

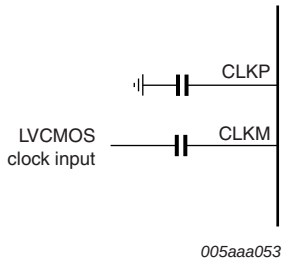
11.4 Clock input

11.4.1 Drive modes

The ADC1415S can be driven differentially (LVPECL). It can also be driven by a single-ended Low Voltage Complementary Metal Oxide Semiconductor (LVCMOS) signal connected to pin CLKP (pin CLKM should be connected to ground via a capacitor) or CLKM (pin CLKP should be connected to ground via a capacitor).

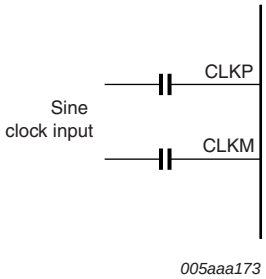


a. Rising edge LVCMOS

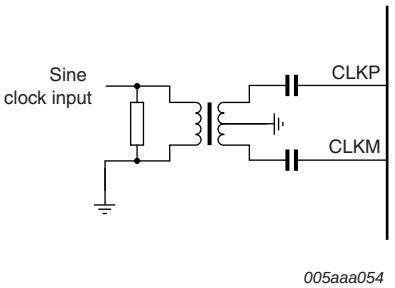


b. Falling edge LVCMOS

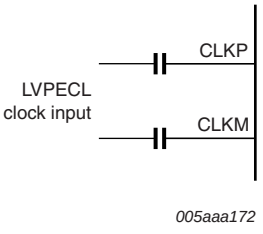
Fig 22. LVCMOS single-ended clock input



a. Sine clock input



b. Sine clock input (with transformer)

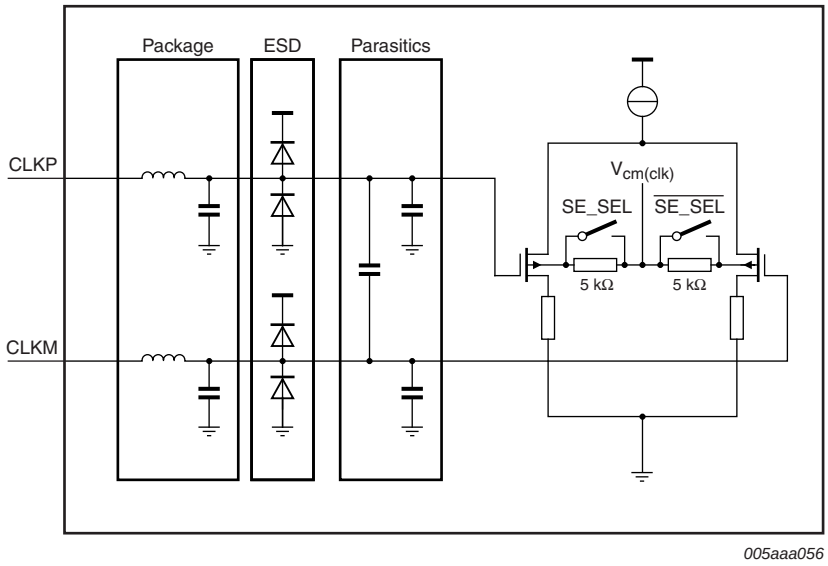


c. LVPECL clock input

Fig 23. Differential clock input

11.4.2 Equivalent input circuit

The equivalent circuit of the input clock buffer is shown in Figure 24. The common-mode voltage of the differential input stage is set via internal 5 kΩ resistors.



$V_{cm(clk)}$ = common-mode voltage of the differential input stage.

Fig 24. Equivalent input circuit

Single-ended or differential clock inputs can be selected via the SPI interface (see Table 20). If single-ended is enabled, the input pin (CLKM or CLKP) is selected via control bit SE_SEL.

If single-ended is implemented without setting bit SE_SEL to the appropriate value, the unused pin should be connected to ground via a capacitor.

11.4.3 Duty cycle stabilizer

The duty cycle stabilizer can improve the overall performance of the ADC by compensating the duty cycle of the input clock signal. When the duty cycle stabilizer is active (bit DCS_EN = logic 1; see Table 20), the circuit can handle signals with duty cycles of between 30 % and 70 % (typical). When the duty cycle stabilizer is disabled (DCS_EN = logic 0), the input clock signal should have a duty cycle of between 45 % and 55 %.

11.4.4 Clock input divider

The ADC1415S contains an input clock divider that divides the incoming clock by a factor of 2 (when bit CLKDIV = logic 1; see Table 20). This feature allows the user to deliver a higher clock frequency with better jitter performance, leading to a better SNR result once acquisition has been performed.

11.5 Digital outputs

11.5.1 Digital output buffers: CMOS mode

The digital output buffers can be configured as CMOS by setting bit LVDS_CMOS to logic_0 (see Table 23).

Each digital output has a dedicated output buffer. The equivalent circuit of the CMOS digital output buffer is shown in Figure 25. The buffer is powered by a separate OGND/V_{DDO} to ensure 1.8 V to 3.3 V compatibility and is isolated from the ADC core. Each buffer can be loaded by a maximum of 10 pF.

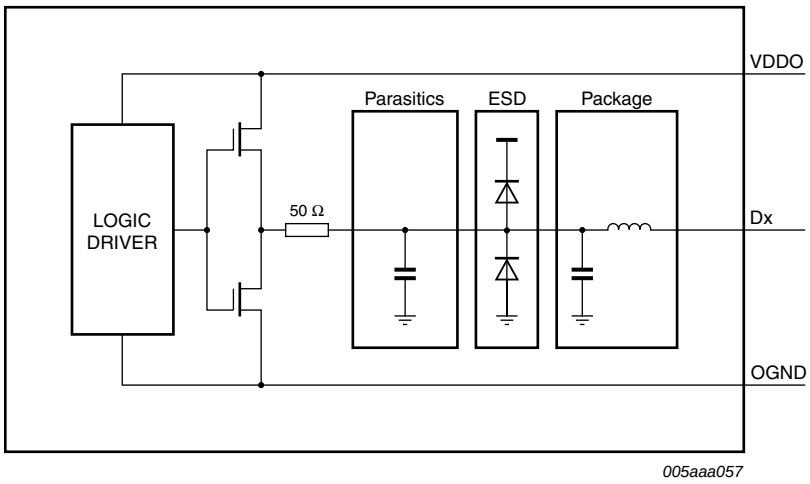


Fig 25. CMOS digital output buffer

The output resistance is 50 Ω and is the combination of the an internal resistor and the equivalent output resistance of the buffer. There is no need for an external damping resistor. The drive strength of both data and DAV buffers can be programmed via the SPI in order to adjust the rise and fall times of the output digital signals (see Table 30):

11.5.2 Digital output buffers: LVDS DDR mode

The digital output buffers can be configured as LVDS DDR by setting bit LVDS_CMOS to logic_1 (see Table 23).

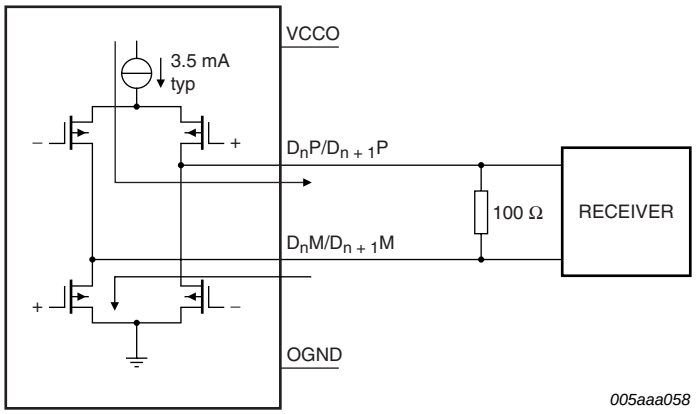

Fig 26. LVDS DDR digital output buffer - externally terminated

Each output should be terminated externally with a 100 Ω resistor (typical) at the receiver side (Figure 26) or internally via SPI control bits LVDS_INT_TER[2:0] (see Figure 27 and Table 32).

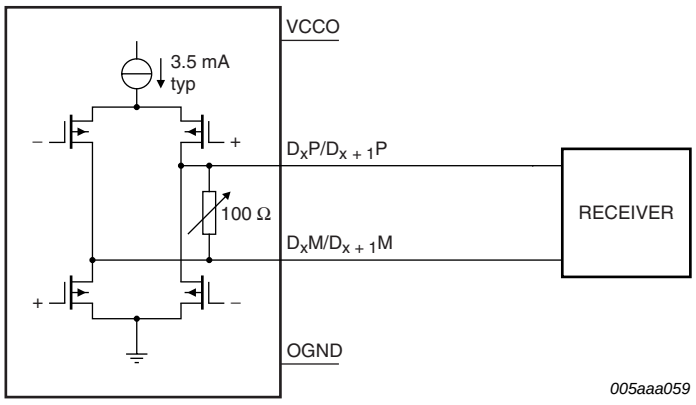

Fig 27. LVDS DDR digital output buffer - internally terminated

The default LVDS DDR output buffer current is set to 3.5 mA. It can be programmed via the SPI (bits DAVI[1:0] and DATAI[1:0]; see Table 31) in order to adjust the output logic voltage levels.

Table 13. LVDS DDR output register 2

LVDS_INT_TER[2:0]	Resistor value (Ω)
000	no internal termination
001	300
010	180
011	110
100	150

Table 13. LVDS DDR output register 2 *…continued*

LVDS_INT_TER[2:0]	Resistor value (Ω)
101	100
110	81
111	60

11.5.3 DAta Valid (DAV) output clock

A data valid output clock signal (DAV) is provided that can be used to capture the data delivered by the ADC1415S. Detailed timing diagrams for CMOS and LVDS DDR modes are provided in Figure 4 and Figure 5 respectively.

11.5.4 Out-of-Range (OTR)

An out-of-range signal is provided on pin OTR. The latency of OTR is fourteen clock cycles. The OTR response can be speeded up by enabling Fast OTR (bit FASTOTR = logic 1; see Table 29). In this mode, the latency of OTR is reduced to only four clock cycles. The Fast OTR detection threshold (below full-scale) can be programmed via bits FASTOTR_DET[2:0].

Table 14. Fast OTR register

FASTOTR_DET[2:0]	Detection level (dB)
000	−20.56
001	−16.12
010	−11.02
011	−7.82
100	−5.49
101	−3.66
110	−2.14
111	−0.86

11.5.5 Digital offset

By default, the ADC1415S delivers output code that corresponds to the analog input. However it is possible to add a digital offset to the output code via the SPI (bits DIG_OFFSET[5:0]; see Table 25).

11.5.6 Test patterns

For test purposes, the ADC1415S can be configured to transmit one of a number of predefined test patterns (via bits TESTPAT_SEL[2:0]; see Table 26). A custom test pattern can be defined by the user (TESTPAT_USER; see Table 27 and Table 28) and is selected when TESTPAT_SEL[2:0] = 101. The selected test pattern is transmitted regardless of the analog input.

11.5.7 Output codes versus input voltage

Table 15. Output codes

$V_{INP} - V_{INM}$	Offset binary	Two's complement	OTR pin

11.6 Serial Peripheral Interface (SPI)

11.6.1 Register description

The ADC1415S serial interface is a synchronous serial communications port that allows easy interfacing with many commonly-used microprocessors. It provides access to the registers that control the operation of the chip.

This interface is configured as a 3-wire type (SDIO as bidirectional pin)

Pin SCLK is the serial clock input and $\overline{CS}$ is the chip select pin.

Each read/write operation is initiated by a LOW level on CS. A minimum of three bytes is transmitted (two instruction bytes and at least one data byte). The number of data bytes is determined by the value of bits W1 and W2 (see Table 17).

Table 16. Instruction bytes for the SPI

	MSB							LSB
Bit	7	6	5	4	3	2	1	0
Description	R/$\overline{W}$[1]	W1[2]	W0[2]	A12	A11	A10	A9	A8
	A7	A6	A5	A4	A3	A2	A1	A0

[1] Bit R/$\overline{W}$ indicates whether it is a read (logic 1) or a write (logic 0) operation.

[2] Bits W1 and W0 indicate the number of bytes to be transferred after the instruction byte (see Table 17).

Table 17. Number of data bytes to be transferred after the instruction bytes

W1	W0	Number of bytes transmitted
0	0	1 byte
0	1	2 bytes
1	0	3 bytes
1	1	4 bytes or more

Bits A12 to A0 indicate the address of the register being accessed. In the case of a multiple byte transfer, this address is the first register to be accessed. An address counter is increased to access subsequent addresses.

The steps involved in a data transfer are as follows:

1. A falling edge on $\overline{CS}$ in combination with a rising edge on SCLK determine the start of communications.
2. The first phase is the transfer of the 2-byte instruction.
3. The second phase is the transfer of the data which can vary in length but is always a multiple of 8 bits. The MSB is always sent first (for instruction and data bytes).
4. A rising edge on $\overline{CS}$ indicates the end of data transmission.

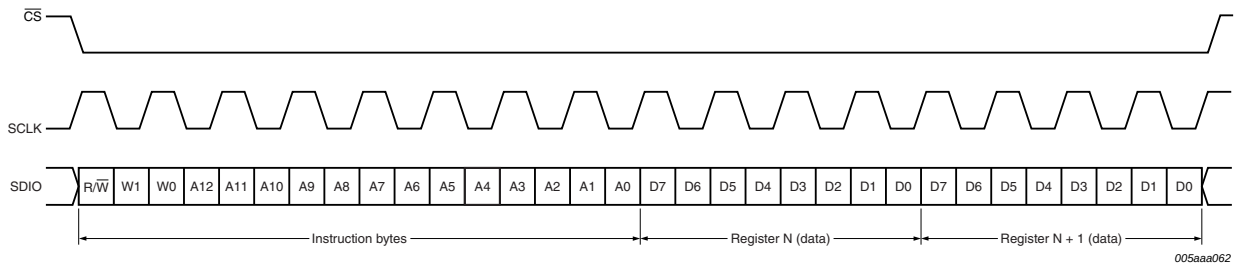

Fig 28. SPI mode timing

11.6.2 Default modes at start-up

During circuit initialization it does not matter which output data standard has been selected. At power-up, the device enters Pin control mode.

A falling edge on $\overline{CS}$ triggers a transition to SPI control mode. When the ADC1415S enters SPI control mode, the output data standard (CMOS/LVDS DDR) is determined by the level on pin SDIO (see Figure 29). Once in SPI control mode, the output data standard can be changed via bit LVDS/CMOS in Table 23.

When the ADC1415S enters SPI control mode, the output data format (two's complement or offset binary) is determined by the level on pin SCLK (gray code can only be selected via the SPI). Once in SPI control mode, the output data format can be changed via bit DATA_FORMAT[1:0] in Table 23.

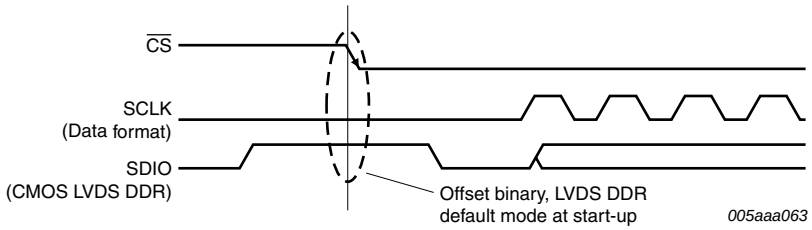

Fig 29. Default mode at start-up: SCLK LOW = offset binary; SDIO HIGH = LVDS DDR

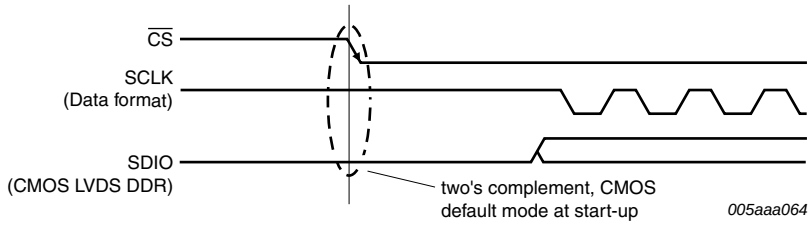

Fig 30. Default mode at start-up: SCLK HIGH = two's complement; SDIO LOW = CMOS

11.6.3 Register allocation map

Table 18. Register allocation map

Add Hex	Register name	R/W	Bit definition								Default

			000	**–20.56 dB**
			001	–16.12 dB
			010	–11.02 dB
			011	–7.82 dB
			100	–5.49 dB
			101	–3.66 dB
			110	–2.14 dB
			111	–0.86 dB

Table 30. CMOS output register (address 0020h) bit description

Default values are highlighted.

Bit	Symbol	Access	Value	Description
7 to 4	-		0000	not used
3 to 2	DAV_DRV[1:0]	R/W		drive strength for DAV CMOS output buffer
			00	low
			01	medium
			10	high
			11	**very high**
1 to 0	DATA_DRV[1:0]	R/W		drive strength for DATA CMOS output buffer
			00	low
			01	medium
			10	**high**
			11	very high

Table 31. LVDS DDR output register 1 (address 0021h) bit description

Default values are highlighted.

Bit	Symbol	Access	Value	Description
7 to 6	-		00	not used
5	DAVI_x2_EN	R/W		double LVDS current for DAV LVDS buffer
			0	**disabled**
			1	enabled
4 to 3	DAVI[1:0]	R/W		LVDS current for DAV LVDS buffer
			00	**3.5 mA**
			01	4.5 mA
			10	1.25 mA
			11	2.5 mA
2	DATAI_x2_EN	R/W		double LVDS current for DATA LVDS buffer
			0	**disabled**
			1	enabled
1 to 0	DATAI[1:0]	R/W		LVDS current for DATA LVDS buffer
			00	**3.5 mA**
			01	4.5 mA
			10	1.25 mA
			11	2.5 mA

Table 32. LVDS DDR output register 2 (address 0022h) bit description

Default values are highlighted.

Bit	Symbol	Access	Value	Description
7 to 4	-		0000	not used
3	BIT/BYTE_WISE	R/W		DDR mode for LVDS output
			0	**bit wise (even data bits output on DAV rising edge / odd data bits output on DAV falling edge)**
			1	byte wise (MSB data bits output on DAV rising edge / LSB data bits output on DAV falling edge)
2 to 0	LVDS_INTTER[2:0]	R/W		internal termination for LVDS buffer (DAV and DATA)
			000	**no internal termination**
			001	300 Ω
			010	180 Ω
			011	110 Ω
			100	150 Ω
			101	100 Ω
			110	81 Ω
			111	60 Ω

12. Package outline

HVQFN40: plastic thermal enhanced very thin quad flat package; no leads; 40 terminals; body 6 x 6 x 0.85 mm **SOT618-6**

14. Legal information

14.1 Data sheet status

Document status[1][2]	Product status[3]	Definition
Objective [short] data sheet	Development	This document contains data from the objective specification for product development.
Preliminary [short] data sheet	Qualification	This document contains data from the preliminary specification.
Product [short] data sheet	Production	This document contains the product specification.

[1] Please consult the most recently issued document before initiating or completing a design.

[2] The term 'short data sheet' is explained in section "Definitions".

[3] The product status of device(s) described in this document may have changed since this document was published and may differ in case of multiple devices. The latest product status information is available on the Internet at URL http://www.nxp.com.

14.2 Definitions

Draft — The document is a draft version only. The content is still under internal review and subject to formal approval, which may result in modifications or additions. NXP Semiconductors does not give any representations or warranties as to the accuracy or completeness of information included herein and shall have no liability for the consequences of use of such information.

Short data sheet — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local NXP Semiconductors sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

Product specification — The information and data provided in a Product data sheet shall define the specification of the product as agreed between NXP Semiconductors and its customer, unless NXP Semiconductors and customer have explicitly agreed otherwise in writing. In no event however, shall an agreement be valid in which the NXP Semiconductors product is deemed to offer functions and qualities beyond those described in the Product data sheet.

14.3 Disclaimers

Limited warranty and liability — Information in this document is believed to be accurate and reliable. However, NXP Semiconductors does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information.

In no event shall NXP Semiconductors be liable for any indirect, incidental, punitive, special or consequential damages (including - without limitation - lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort (including negligence), warranty, breach of contract or any other legal theory.

Notwithstanding any damages that customer might incur for any reason whatsoever, NXP Semiconductors' aggregate and cumulative liability towards customer for the products described herein shall be limited in accordance with the *Terms and conditions of commercial sale* of NXP Semiconductors.

Right to make changes — NXP Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

Suitability for use — NXP Semiconductors products are not designed, authorized or warranted to be suitable for use in life support, life-critical or safety-critical systems or equipment, nor in applications where failure or malfunction of an NXP Semiconductors product can reasonably be expected to result in personal injury, death or severe property or environmental damage. NXP Semiconductors accepts no liability for inclusion and/or use of NXP Semiconductors products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

Applications — Applications that are described herein for any of these products are for illustrative purposes only. NXP Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Customers are responsible for the design and operation of their applications and products using NXP Semiconductors products, and NXP Semiconductors accepts no liability for any assistance with applications or customer product design. It is customer's sole responsibility to determine whether the NXP Semiconductors product is suitable and fit for the customer's applications and products planned, as well as for the planned application and use of customer's third party customer(s). Customers should provide appropriate design and operating safeguards to minimize the risks associated with their applications and products.

NXP Semiconductors does not accept any liability related to any default, damage, costs or problem which is based on any weakness or default in the customer's applications or products, or the application or use by customer's third party customer(s). Customer is responsible for doing all necessary testing for the customer's applications and products using NXP Semiconductors products in order to avoid a default of the applications and the products or of the application or use by customer's third party customer(s). NXP does not accept any liability in this respect.

Limiting values — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) will cause permanent damage to the device. Limiting values are stress ratings only and (proper) operation of the device at these or any other conditions above those given in the Recommended operating conditions section (if present) or the Characteristics sections of this document is not warranted. Constant or repeated exposure to limiting values will permanently and irreversibly affect the quality and reliability of the device.

Terms and conditions of commercial sale — NXP Semiconductors products are sold subject to the general terms and conditions of commercial sale, as published at http://www.nxp.com/profile/terms, unless otherwise agreed in a valid written individual agreement. In case an individual agreement is concluded only the terms and conditions of the respective agreement shall apply. NXP Semiconductors hereby expressly objects to applying the customer's general terms and conditions with regard to the purchase of NXP Semiconductors products by customer.

No offer to sell or license — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.

Export control — This document as well as the item(s) described herein may be subject to export control regulations. Export might require a prior authorization from national authorities.

Non-automotive qualified products — Unless this data sheet expressly states that this specific NXP Semiconductors product is automotive qualified, the product is not suitable for automotive use. It is neither qualified nor tested in accordance with automotive testing or application requirements. NXP Semiconductors accepts no liability for inclusion and/or use of non-automotive qualified products in automotive equipment or applications.

In the event that customer uses the product for design-in and use in automotive applications to automotive specifications and standards, customer (a) shall use the product without NXP Semiconductors' warranty of the product for such automotive applications, use and specifications, and (b) whenever customer uses the product for automotive applications beyond NXP Semiconductors' specifications such use shall be solely at customer's own risk, and (c) customer fully indemnifies NXP Semiconductors for any liability, damages or failed product claims resulting from customer design and use of the product for automotive applications beyond NXP Semiconductors' standard warranty and NXP Semiconductors' product specifications.

Date of release: 17 December 2010
Document identifier: ADC1415S_SER

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits,General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
