6	RFOUT2	RF output terminal of cellular band signal. RF signal and DC power is input through external matching circuit connected to this terminal. External matching circuit and DC blocking capacitor are required.
7	GND	Ground terminal. This terminal is not connected with internal circuit.
8	GND	Ground terminal.
9	GND	Ground terminal. This terminal is not connected with internal circuit.
10	GND	Ground terminal. This terminal is not connected with internal circuit.
11	GND	Ground terminal.
12	RFIN2	RF input terminal of cellular band signal. RF signal is input through external matching circuit connected to this terminal. A DC blocking capacitor is not required.
13	RFIN1	RF input terminal of PCS band signal. RF signal is input through external matching circuit connected to this terminal. A DC blocking capacitor is not required.
14	GND	Ground terminal. This terminal is not connected with internal circuit.

Notes:

- 1) Ground terminal (No.1, 4, 8, and 11) should be connected with the ground plane as close as possible for good RF performance, because distance to GND makes parasitic inductance.
