

MH32S72BBFA -7,-8

2,415,919,104-BIT (33,554,432-WORD BY 72-BIT) Synchronous DYNAMIC RAM

DESCRIPTION

The MH32S72BBFA is 33554432 - word x 72-bit Synchronous DRAM stacked structural module. This consist of thirty-six industry standard 16M x 4 Synchronous DRAMs in TSOP.

The stacked structure of TSOP on a card edge dual in-line package provides any application where high densities and large of quantities memory are required.

This is a socket-type memory module ,suitable for easy interchange or addition of module.

FEATURES

Type name	Max. Frequency	CLK Access Time [latch mode] (CL = 4)
MH32S72BBFA-7	100MHz	6ns
MH32S72BBFA-8	100MHz	6ns

- Utilizes industrystandard 16M X 4 Synchronous DRAMs in TSOP package , industry standard Resister in TSSOP package , and industry standard PLL in TSSOP package.
- Single 3.3V +/- 0.3V supply
- Burst length 1/2/4/8/Full Page (programmable)
- Burst type sequential / interleave (programmable)
- Column access random
- Burst W rite / Single W rite (programmable)
- Auto precharge / Auto bank precharge controlled by A10
- Auto refresh and Self refresh
- LVTTTL Interface
- 4096 refresh cycles every 64ms
- Intel specifiation(rev. 1.2)compliant PCB and SPD 1.2A

APPLICATION

Main memoryunit for computers, Microcomputer memory.

MH32S72BBFA -7,-8

PIN FUNCTION

CK0	Input	Master Clock:All other inputs are referenced to the rising edge of CK
CKE0	Input	Clock Enable:CKE controls internal clock.When CKE is low,internal clock for the following cycle is ceased. CKE is also used to select auto / self refresh. After self refresh mode is started, CKE E becomes asynchronous input.Self refresh is maintained as long as CKE is low.
/S0 - 3	Input	Chip Select: When /S is high,any command means No Operation.
/RAS,/CAS,/W	Input	Combination of /RAS,/CAS,/W defines basic commands.
A0-11	Input	A0-11 specify the Row/Column Address in conjunction with BA.The Row Address is specified by A0-11.The Column Address is specified by A0-9.A10 is also used to indicate precharge option.When A10 is high at a read / write command, an auto precharge is performed. When A10 is high at a precharge command, both banks are precharged.
BA0-1	Input	Bank Address:BA0,1 is not simply BA.BA0,1 specifies the bank to which a command is applied.BA must be set with ACT,PRE,READ,WRITE commands
DQ0-63 CB0-7	Input/Output	Data In and Data out are referenced to the rising edge of CK
DQM0-7	Input	Din Mask/Output Disable:When DQMB is high in burst write.Din for the current cycle is masked.When DQMB is high in burst read,Dout is disabled at the next but one cycle.
Vdd,Vss	Power Supply	Power Supply for the memory mounted module.
REGE	Output	Register enable:When REGE is low,All control signals and address are buffered. (Buffer mode) When REGE is high,All control and address are latched. (Latch mode)

MH32S72BBFA -7,-8

BASIC FUNCTIONS

The MH32S72BBFA provides basic functions, bank(row) activate, burst read / write, bank(row) precharge, and auto / self refresh.

Each command is defined by control signals of /RAS, /CAS and /WE at CK rising edge. In addition to 3 signals, /S, CKE and A10 are used as chip select, refresh option, and precharge option, respectively.

To know the detailed definition of commands please see the command truth table.

Activate(ACT) [/RAS =L, /CAS = /WE =H]

ACT command activates a row in an idle bank indicated by BA.

Read(READ) [/RAS =H, /CAS =L, /WE =H]

READ command starts burst read from the active bank indicated by BA. First output data appears after /CAS latency. When A10 =H at this command, the bank is deactivated after the burst read(auto-precharge, **READA**).

Write(WRITE) [/RAS =H, /CAS = /WE =L]

WRITE command starts burst write to the active bank indicated by BA. Total data length to be written is set by burst length. When A10 =H at this command, the bank is deactivated after the burst write(auto-precharge, **WRITEA**).

Precharge(PRE) [/RAS =L, /CAS =H, /WE =L]

PRE command deactivates the active bank indicated by BA. This command also terminates burst read / write operation. When A10 =H at this command, both banks are deactivated(precharge all, **PREA**).

Auto-Refresh(REFA) [/RAS =/CAS =L, /WE =CKE =H]

REFA command starts auto-refresh cycle. Refresh address including bank address are generated internally. After this command, the banks are precharged automatically.

ABBREVIATIONS:

H = Hige Level, L = Low Level, X = Don't Care

BA = Bank Address, RA = Row Address, CA = Column Address, NOP = No Operation

NOTES:

1. All entries assume that CKE was High during the preceding clock cycle and the current clock cycle.
2. ILLEGAL to bank in specified state; function may be legal in the bank indicated by BA, depending on the state of that bank.
3. Must satisfy bus contention, bus turn around, write recovery requirements.
4. NOP to bank precharging or in idle state.May precharge bank indicated by BA.
5. ILLEGAL if any bank is not idle.

ILLEGAL = Device operation and / or date-integrity are not guaranteed.

ABBREVIATIONS:

H = High Level, L = Low Level, X = Don't Care

NOTES:

1. CKE Low to High transition will re-enable CK and other inputs **asynchronously**.
A minimum setup time must be satisfied before any command other than EXIT.
2. Power-Down and Self-Refresh can be entered only from the All banks idle State.
3. Must be legal command.

MH32S72BBFA -7,-8

2,415,919,104-BIT (33,554,432-WORD BY 72-BIT) Synchronous DYNAMIC RAM

POWER ON SEQUENCE

Before starting normal operation, the following power on sequence is necessary to prevent a SDRAM from damaged or malfunctioning.

1. Apply power and start clock. Attempt to maintain CKE high, DQMB high and NOP condition at the inputs.
2. Maintain stable power, stable clock, and NOP input conditions for a minimum of 500μs.
3. Issue precharge commands for all banks. (PRE or PREA)
4. After all banks become idle state (after tRP), issue 8 or more auto-refresh commands.
5. Issue a mode register set command to initialize the mode register.

After these sequence, the SDRAM is idle state and ready for normal operation.

MODE REGISTER

Burst Length, Burst Type and /CAS Latency can be programmed by setting the mode register(MRS). The mode register stores these data until the next MRS command, which may be issued when both banks are in idle state. After tRSC from a MRS command, the SDRAM is ready for new command.

READ CYCLE (dual bank)

The diagram shows the timing of various signals over 18 clock cycles. The signals are: CLK (clock), ICS (input clock strobe), /RAS (row address strobe), /CAS (column address strobe), /WE (write enable), CKE (clock enable), DQM (data mask), A0-9 (data address), A10 (data address), A11 (data address), BA0,1 (bank address), REGE (refresh enable), and DQ (data). The sequence of operations is: ACT#0 (at cycle 1), READ#0 (at cycle 3), PRE#0 (at cycle 5), ACT#1 (at cycle 7), READ#1 (at cycle 9), PRE#1 (at cycle 11), ACT#2 (at cycle 13), and READ#0 (at cycle 15). Key timing parameters are labeled: tRC (row cycle time), tRRD (row-to-row delay), tRAS (row address strobe to data output delay), tRP (row precharge time), tRCD (row address strobe to column address strobe delay), DQM read latency = 2 (DQM read latency), and CL = 3 (CAS latency).

Keep safety first in your circuit designs!

Mitsubishi Electric Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of non-flammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials

1. These materials are intended as a reference to assist our customers in the selection of the Mitsubishi semiconductor product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Mitsubishi Electric Corporation or a third party.
2. Mitsubishi Electric Corporation assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts or circuit application examples contained in these materials.
3. All information contained in these materials, including product data, diagrams and charts, represent information on products at the time of publication of these materials, and are subject to change by Mitsubishi Electric Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for the latest product information before purchasing a product listed herein.
4. Mitsubishi Electric Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor when considering the use of a product contained herein for special applications, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
5. The prior written approval of Mitsubishi Electric Corporation is necessary to reprint or reproduce in whole or in part these materials.
6. If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.
Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
7. Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for further details on these materials or the products contained therein.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
