

NB3RL02

Low Phase-Noise Two-Channel Clock Fanout Buffer

The NB3RL02 is a low-skew, low jitter 1:2 clock fan-out buffer, ideal for use in portable end-equipment, such as mobile phones. With integrated LDO and output control circuitry.

The MCLK_IN pin has an AC coupling capacitor and will directly accept a square or sine wave clock input, such as a temperature compensated crystal oscillator (TCXO). The minimum acceptable input amplitude of the sine wave is 300 mV peak-to-peak.

The two clock outputs are enabled by control inputs CLK_REQ1 and CLK_REQ2.

The NB3RL02 has an integrated Low-Drop-Out (LDO) voltage regulator which accepts input voltages from 2.3 V to 5.5 V and outputs 1.8 V at $I_{out} = 50$ mA. This 1.8 V supply is externally available to provide regulated power to peripheral devices, such as a TCXO.

The adaptive clock output buffers offer controlled slew-rate over a wide capacitive loading range which minimizes EMI emissions, maintains signal integrity, and minimizes ringing caused by signal reflections on the clock distribution lines.

The NB3RL02 is offered in a 0.4 mm pitch wafer-level-chip-scale (WLCS) package and is optimized for very low standby current consumption.

Features

- Low Additive Noise:
 - ♦ -149 dBc/Hz at 10 kHz Offset Phase Noise
 - ♦ 0.37 ps (rms) Output Jitter
- Limited Output Slew Rate for EMI Reduction (1 ns to 5 ns/Rise/Fall Time for 10–50 pF Loads)
- Regulated 1.8 V Output Supply Available for External Clock Source, ie. TCXO
- Ultra-Small Package:
 - ♦ 8-ball: 0.4 mm Pitch WLCS
- ESD Performance Exceeds JESD 22
 - ♦ 2000 V Human-Body Model (A114-A)
 - ♦ 200 V Machine Model (A115-A)
 - ♦ 1000 V Charged-Device Model (JESD22-C101-A Level III)
- These are Pb-Free Devices

Applications

- Cellular Phones
- Global Positioning Systems (GPS)

APPLICATION INFORMATION

Typical Application

A typical mobile application for the NB3RL02 is shown in Figure 2. An external low noise TCXO clock source is powered by the NB3RL02's 1.8 V regulated LDO and is

buffered to drive a mobile GPS receiver and WLAN transceiver. Each peripheral can independently request an active clock by asserting a clock request line (CLK_REQ1 or CLK_REQ2).

Figure 2. Mobile Application

When both clock request lines are logic LOW, the NB3RL02 enters a current-saving shutdown mode. In this mode, the LDO output goes to 0 V and turns off the TCXO. Also, the unpowered CLK_OUT1 and CLK_OUT2 outputs are pulled to GND.

When the NB3RL02 receives a HIGH from either peripheral CLK_REQn, the 1.8 V LDO output is enabled and will power the TCXO. The output of the TCXO can be a square wave, sine wave, or clipped sine wave and is converted to a buffered square wave.

Input Clock to Output Square Wave Generator

Figure 3 shows the MCLK_IN input having an internal AC coupling capacitor. This allows either a square or sine wave signal to be directly connected from a TCXO. Therefore, an external series capacitor is not required.

Figure 3. Input Stage

The clock frequency band of the NB3RL02 is 10 MHz to 52 MHz with all performance metrics specified at 26 MHz.

Typical input sinusoidal signal amplitude is 0.8 V_{pp} for specified performance, but amplitudes as low as 0.3 V_{pp} are

acceptable, but with reduced phase noise and jitter performance.

CLK_OUT1 and CLK_OUT2 Outputs

The CLK_OUT1 and CLK_OUT2 outputs drive 1.8 V LVCMOS levels with rise/fall times within 1 ns to 5 ns with load capacitors between 10 pF and 50 pF. These relatively slow edge rates will minimize EMI radiation into the system. When not requested, each output is set to Low to avoid false clocking of the load device.

LDO

The integrated low noise 1.8 V LDO provides power internal to the NB3RL02 as well as a power source for an external clock such as a TCXO. The input range of the LDO allows the device to be powered directly from a single cell Li battery. The LDO is enabled when either of the CLK_REQn signals is High.

When disabled, the device turns off the LDO and enters a low power shutdown mode consuming less than 1 μA from the battery.

The LDO requires an output decoupling capacitor in the range of 1 μF to 10 μF for compensation and high frequency PSR. An input bypass capacitor of 1 μF or larger is recommended.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
