# **ON Semiconductor**®

# To learn more about ON Semiconductor, please visit our website at <u>www.onsemi.com</u>

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (\_), the underscore (\_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (\_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at <a href="https://www.onsemi.com">www.onsemi.com</a>. Please email any questions regarding the system integration to <a href="https://www.onsemi.com">Fairchild\_questions@onsemi.com</a>.

Should Buyer purchase or use ON Semiconductor products for any such unintended or unauthorized applications, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that ON Semiconductor was negligent regarding the design or manufacture of the part. ON Semiconductor is an equif prese

# 74VHC157 Quad 2-Input Multiplexer

## Features

- High Speed: t<sub>PD</sub> = 4.1ns (Typ.) at V<sub>CC</sub> = 5V
- Low power dissipation: I<sub>CC</sub> = 4µA (Max.) at T<sub>A</sub> = 25°C
- High noise immunity:  $V_{NIH} = V_{NIL} = 28\% V_{CC}$  (Min.)
- Power down protection is provided on all inputs
- Low noise: V<sub>OLP</sub> = 0.8V (Max.)
- Pin and function compatible with 74HC157

# **General Description**

The VHC157 is an advanced high speed CMOS Quad 2-Channel Multiplexer fabricated with silicon gate CMOS technology. It achieves the high speed operation similar to equivalent Bipolar Schottky TTL while maintaining the CMOS low power dissipation.

It consists of four 2-input digital multiplexers with common select and enable inputs. When the ENABLE input is held "H" level, selection of data is inhibited and all the outputs become "L" level. The SELECT decoding determines whether the I<sub>0x</sub> or I<sub>1x</sub> inputs get routed to their corresponding outputs.

An Input protection circuit ensures that 0V to 7V can be applied to the input pins without regard to the supply voltage. This device can be used to interface 5V to 3V systems and on two supply systems such as battery back up. This circuit prevents device destruction due to mismatched supply and input voltages.

## **Ordering Information**

Order Number	Package Number	Package Description
74VHC157M	M16A	16-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-012, 0.150" Narrow
74VHC157SJ	M16D	16-Lead Small Outline Package (SOP), EIAJ TYPE II, 5.3mm Wide
74VHC157MTC	MTC16	16-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 4.4mm Wide

Surface mount packages are also available on Tape and Reel. Specify by appending the suffix letter "X" to the ordering number.

## **Pin Description**

Pin Names	Description
I <sub>0a</sub> –I <sub>0d</sub>	Source 0 Data Inputs
I <sub>1a</sub> –I <sub>1d</sub>	Source 1 Data Inputs
Ē	Enable Input
S	Select Input
Z <sub>a</sub> –Z <sub>d</sub>	Outputs

# **Truth Table**

	Outputs			
Ē	S	I <sub>0</sub>	I <sub>1</sub>	Z
Н	Х	Х	Х	L
L	Н	Х	L	L
L	Н	Х	Н	Н
L	L	L	Х	L
L	L	Н	Х	Н

H = HIGH Voltage Level

L = LOW Voltage Level

X = Immaterial

# **Functional Description**

The VHC157 is a quad 2-input multiplexer. It selects four bits of data from two sources under the control of a common Select input (S). The Enable input ( $\overline{E}$ ) is active-LOW. When  $\overline{E}$  is HIGH, all of the outputs (Z) are forced LOW regardless of all other inputs. The VHC157 is the logic implementation of a 4-pole, 2-position switch where the position of the switch is determined by the logic levels supplied to the Select input. The logic equations for the outputs are shown below:

$Z_{a} = \overline{E} \cdot (I_{1a} \cdot S + I_{0a} \cdot \overline{S})$
$\mathbf{Z}_{b} = \overline{E} \cdot (I_{1b} \cdot S + I_{0b} \cdot \overline{S})$
$Z_{c} = \overline{E} \cdot (I_{1c} \cdot S + I_{0c} \cdot \overline{S})$
$\mathbf{Z}_{d} = \overline{E} \cdot (I_{1d} \cdot S + I_{0d} \cdot \overline{S})$

A common use of the VHC157 is the moving of data from two groups of registers to four common output busses. The particular register from which the data comes is determined by the state of the Select input. A less obvious use is as a function generator. The VHC157 can generate any four of the sixteen different functions of two variables with one variable common. This is useful for implementing gating functions.

Please note that this diagram is provided only for the understanding of logic operations and should not be used to estimate propagation delays.

# **Absolute Maximum Ratings**

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter	Rating
V <sub>CC</sub>	Supply Voltage	-0.5V to +7.0V
V <sub>IN</sub>	DC Input Voltage	-0.5V to +7.0V
V <sub>OUT</sub>	DC Output Voltage	-0.5V to V <sub>CC</sub> + 0.5V
I <sub>IK</sub>	Input Diode Current	–20mA
I <sub>OK</sub>	Output Diode Current	±20mA
I <sub>OUT</sub>	DC Output Current	±25mA
I <sub>CC</sub>	DC V <sub>CC</sub> / GND Current	±50mA
T <sub>STG</sub>	Storage Temperature	–65°C to +150°C
TL	Lead Temperature (Soldering, 10 seconds)	260°C

# Recommended Operating Conditions<sup>(1)</sup>

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to absolute maximum ratings.

Symbol	Parameter	Rating
V <sub>CC</sub>	Supply Voltage	2.0V to +5.5V
V <sub>IN</sub>	Input Voltage	0V to +5.5V
V <sub>OUT</sub>	Output Voltage	0V to V <sub>CC</sub>
T <sub>OPR</sub>	Operating Temperature	–40°C to +85°C
t <sub>r</sub> , t <sub>f</sub>	Input Rise and Fall Time,	
	$V_{CC} = 3.3V \pm 0.3V$	0ns/V ~ 100ns/V
	$V_{CC} = 5.0V \pm 0.5V$	0ns/V ~ 20ns/V

Note:

1. Unused inputs must be held HIGH or LOW. They may not float.

#### Note:

3.  $C_{PD}$  is defined as the value of the internal equivalent capacitance which is calculated from the operating current consumption without load. Average operating current can be obtained by the equation:  $I_{CC}$  (opr.) =  $C_{PD} \cdot V_{CC} \cdot f_{IN} + I_{CC}$

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
