

LTM4605

20V, 5A High Efficiency Buck-Boost μ Module Regulator

DESCRIPTION

Demonstration circuit DC1198B-A features the [LTM[®]4605EV](#), the high efficiency, high density switch mode buck-boost μ Module[®] regulator. The LTM4605EV can regulate its output voltage from an input voltage above, below, or equal to the output. The input voltage range of DC1198B-A is from 4.5V to 20V with a preset output voltage of 12V. The rated load current is 5A, although derating is necessary for certain V_{IN} , V_{OUT} , and thermal conditions. The switching frequency may be synchronized to an external clock from 200kHz to 400kHz. This PLL

can be used not only to reduce undesirable frequency harmonics but also to parallel LTM4605 to provide high output current. The LTM4605 data sheet must be read in conjunction with this demo manual prior to working on or modifying DC1198B-A.

Design files for this circuit board are available at <http://www.linear.com/demo>

DEMO MANUAL DC1198B-A

QUICK START PROCEDURE

Demonstration circuit DC1198B-A is an easy way to evaluate the performance of the LTM4605EV. Please refer to Figure 1 for proper measurement equipment set-up and follow the procedure below:

1. Place jumpers in the following positions for a typical 12V_{OUT} application:

RUN	CLOCK	MODE	START
ON	PROG	CCM	SSO

2. With power off, connect the input power supply, load and meters as shown in Figure 1. Preset the load to 0A and V_{IN} supply to be less than 20V.
3. Turn on the power at the input. The output voltage should be 12V ± 2%.

4. Once the proper output voltage is established, adjust the load within the operating range and observe the output voltage regulation, ripple voltage, efficiency and other parameters. Cooling fan and lower current sensing resistor are necessary for V_{IN} < 5V and I_{OUT} = 5A.
5. To measure input and output ripple, please refer to Figure 2 for proper setup.
6. The voltage of pin PLLFLTR determines the switching frequency. Modify R6 and R7 to adjust the switching frequency. Turn off the power supply before attempting to remove and replace R6 and R7. Do not allow voltage at pin PLLFLTR exceed 2.4V.
7. The Inductor, RS1 and RS2 should be modified to accommodate certain input and output condition. Please refer to the LTM4605 data sheet for recommended component values.
