Super Capacitors

⚠

●All specifications in this catalog and production status of products are subject to change without notice. Prior to the purchase, please contact NEC TOKIN for updated product data.
●Please request for a specification sheet for detailed product data prior to the purchase.
●Before using the product in this catalog, please read "Precautions" and other safety precautions listed in the printed version catalog.

2010.11.8 9565SCAVOL12E

FOR CORRECT USE OF SUPER CAPACITORS

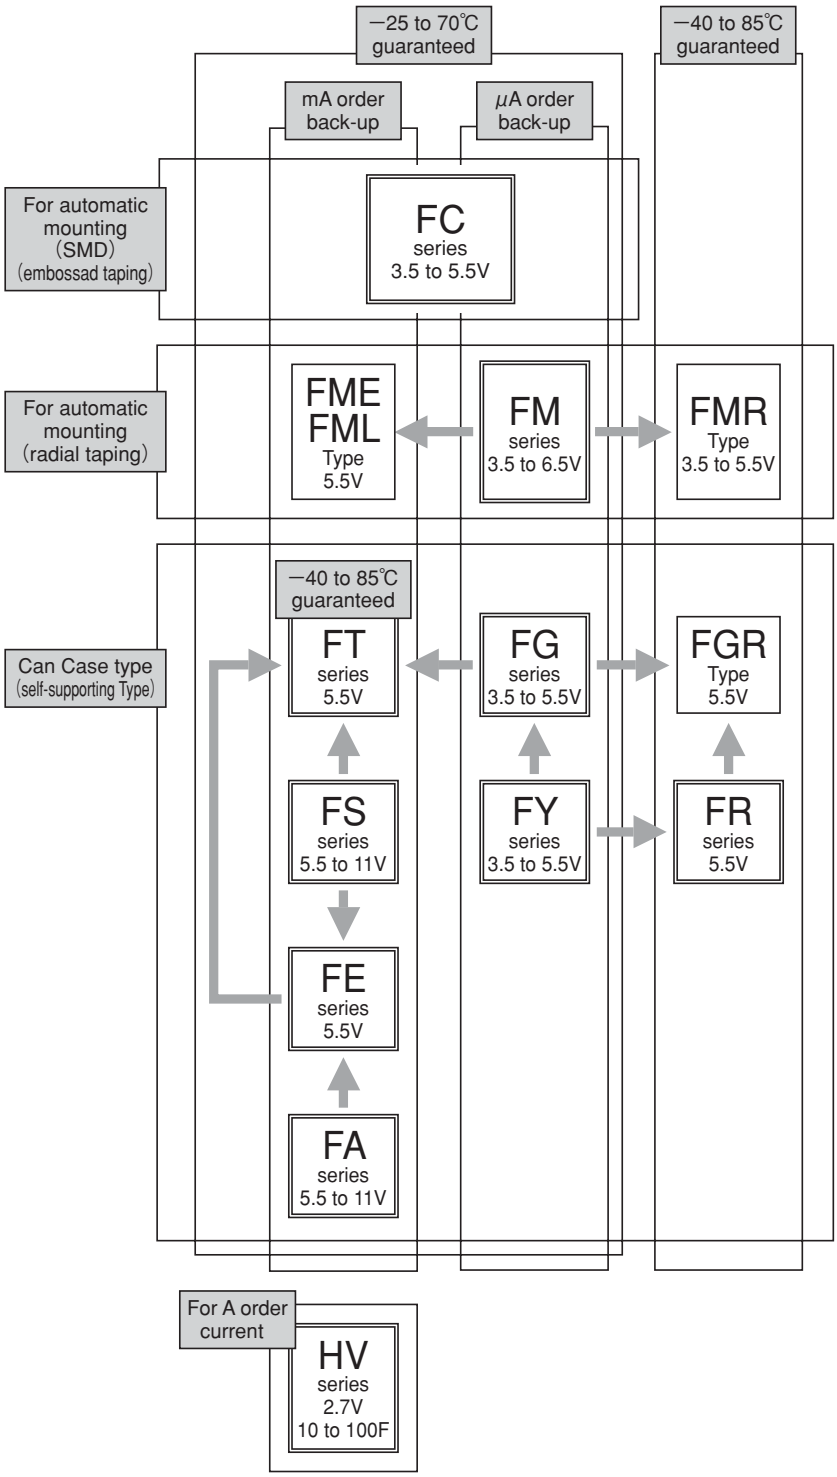
1. Please confirm the operating conditions and the specifications of the Super Capacitors befor using them.
2. The electrolyte of these Super Capacitors is sealed with material such as rubber. When you use the capacitors for a long time at high temperature, the moisture of the eleotrolyte evaporates and the equivalent series resistance (E.S.R.) increases. The fundamental failure mode is the open mode depending on E.S.R. increase.

   When using a capacitor, please introduce a safe design assuming unexpected capacitor failure, such as redundancy in design and protection from fire and erroneous operation.
3. Please read 'Notes on Using the Super Capacitor' on page 60 when you design the circuits using the Super Capacitors.

CONTENTS

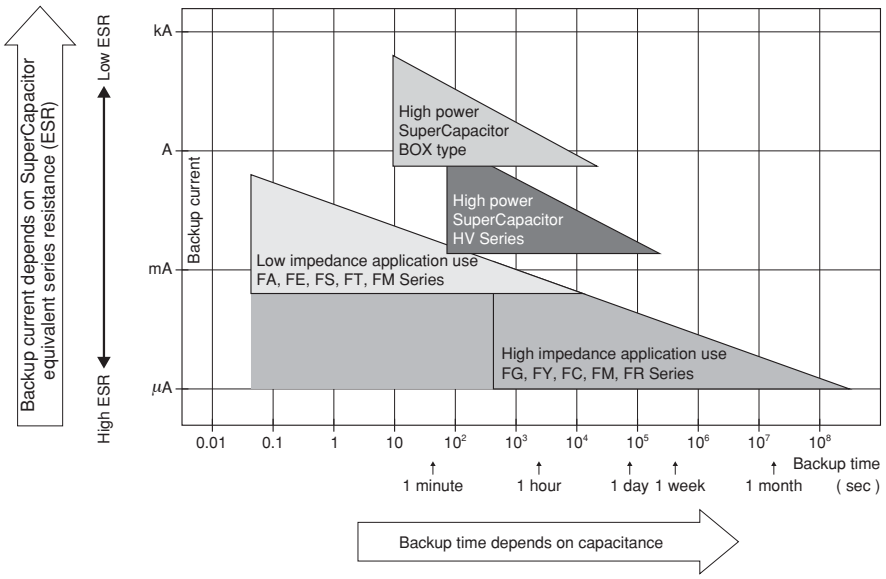
2010.11.8 9565SCAVOL12E

1. Organization of Super Capacitor Series



2010.11.8 9565SCAVOL12E

2. Performance for Selection



3. Characteristics of Super Capacitor

Super Capacitor can not be used for applications in AC circuit such as ripple absorption because it has high internal resistance (several hundred mΩ to a hundred Ω) compared to aluminum electrolysis capacitor. Thus its main use would be similar to that of secondary battery such as power back-up in DC circuit. The following list shows the characteristics of Super Capacitors as compared to aluminum electrolyses capacitors for power back-up and secondary batteries.

	Secondary battery		Capacitor	
	NiCd battery	Lithium ion battery	Aluminum electrolysis capacito	Super Capacitor
Back-up ability	◎	◎	△	○
Eco-hazard	Cd	——	——	——
Operating temperature range	−20 to 60 ℃	−20 to 50 ℃	−55 to 105 ℃	−40 to 85 ℃ (FR, FT)
Charge time	few hours	few hours	few minutes	few minutes
Charge/discharge life time	approx. 500 times	approx. 500 to 1000 times	limitless (*1)	limitless (*1)
Restrictions on charge/discharge	yes	yes	none	none
Flow soldering	not applicable	not applicable	applicable	applicable
Automatic mounting	not applicable	not applicable	applicable	applicable (FM and FC series)
Safety risks	leakage, explosion	leakage, combustion, explosion, ignition	heat-up, explosion	gas emission (*2)

(*1) Aluminum electrolysis capacitor and Super Capacitor has limited lifetime. However, when used under proper conditions, both can operate sufficiently within the designed lifetime of the set they are built in.

(*2) There is no harm as it is a mere leak of water vapor which transitioned from water contained in the electrolyte (diluted sulfuric acid). However, application of abnormal voltage surge exceeding maximum operating voltage may result in leakage and explosion.

2010.11.8 9565SCAVOL12E

4. Typical Applications

As in the characteristics remarked previously, Super Capacitor has characteristics intermediate between general capacitors and batteries. Because of this, Super Capacitor can be used like a secondary battery when applied to DC circuit. The best suited applications of Super Capacitor are back-up device for the power shut-down of micro computers and RAM's. The list below shows main application examples.

Application Examples of Super Capacitor

Intended use (guideline)	Power supply (guideline)	Application	Examples of equipments	Series
Long time back-up	500 μA and below	・CMOS RAM, IC for clocks	・Measuring device, Control equipment, Communication device, Automotive power source	・FR series (85℃ guaranteed)
		・CMOS micro computer, IC for clocks	・CMOS micro computer ・Static RAM/DTS (digital tuning system)	・FC series ・FG series ・FY series ・FM series
Back-up for 1 hour or less	50 mA and below	・Micro computer, RAM	・VCR, Microwave oven, ・Micro computer ・Memory equipped device	・FT series ・FS series
		・Driving motor	・VCR, Printer, Projector ・Video disk	
		・Subsidiary power supply for driving motor during voltage drop	・Camera	
Back-up for 10 seconds or less	1 A and below	・Power source of toys, LED, buzzer	・Toys, Display device, Alarm device	・FA series ・FE series
		・High current supply for a short amount of time	・Actuator, Relay solenoid, Gas igniter	
Power assist	Up to several A	・Power supply, Subsidiary power supply	・Street sign, Display light , UPS	・HV series

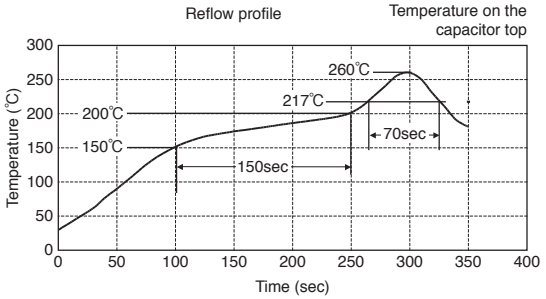
Precautions for use

- This series is exclusively for reflow soldering. It is designed for thermal conduction system such as combination use of infrared ray and heat blow. Consult with NEC TOKIN before applying other methods.
- The reflow condition must be kept within reflow profile graphs shown below.
- Applying reflow soldering is limited to 2 times. After the first reflow, cool down the capacitor thoroughly to 5-35℃ before the second reflow.

Always consult with NEC TOKIN when applying reflow soldering in a more severe condition than the condition described here.

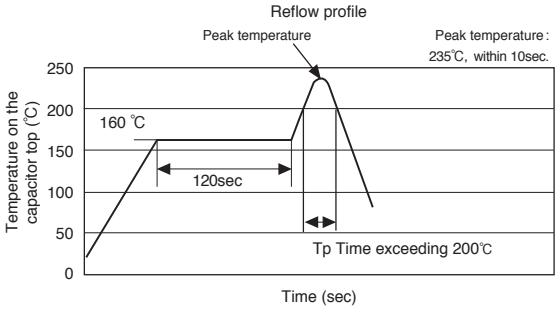
- FCS Type

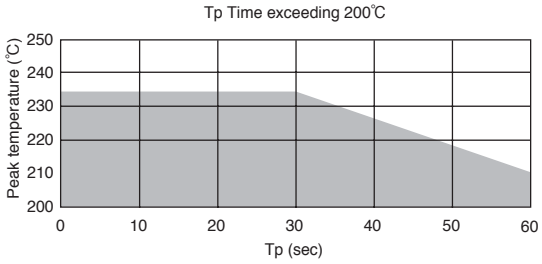


- Above "Reflow Profile" graph indicates temperature at the terminals and capacitor top.

Peak temperature	Below 260℃
Over 255℃	Within 10sec.
Over 230℃	Within 45sec.
Over 220℃	Within 60sec.
Over 217℃	Within 70sec.
Time between 150℃ to 200℃ (temperature zone over 170℃ =within 50sec.)	150sec.

- FC, FCH Type





- Above "Reflow Profile" graph indicates temperature at the terminals and capacitor top.

Specifications

Item \ Series name		FC		Test conditions (conforming to JIS C 5160-1)
		5.5V type, 3.5V type		
Category temperature range		−25℃ to +70℃		
MAX operating voltage		5.5Vdc, 3.5Vdc		
Capacitance		Refer to standard ratings		Refer to “Measurement Conditions”
Capacitance allowance		+80 %, −20 %		Refer to “Measurement Conditions”
ESR		Refer to standard ratings		Measured at 1kHz, 10mA ; See also “Measurement Conditions”
Current (30-minutes value)		Refer to standard ratings		Refer to “Measurement Conditions”
* Surge	Capacitance	More than 90% of initial ratings		Surge voltage：4.0V (3.5V type, 3.6V type) ：6.3V (5.5V type) Charge：30 sec. Discharge：9min 30sec. Number of cycles：1000 Series resistance：0.043F, 0.047F 300Ω ：0.068F 240Ω ：0.10F 150Ω ：0.22F 56Ω ：0.47F 30Ω ：1.0F 15Ω Discharge resistance：0Ω Temperature：70±2℃
	ESR	Not to exceed 120% of initial ratings		
	Current (30 minutes value)	Not to exceed 120% of initial ratings		
	Appearance	No obvious abnormality		
* Characteristics in different temperature	Capacitance	Phase 2	50% higher than initial value	Conforms to 4.17 Phase1：+25±2℃ Phase2：−25±2℃ Phase4：+25±2℃ Phase5：+70±2℃ Phase6：+25±2℃
	ESR		400% or less than initial value	
	Capacitance	Phase 3		
	ESR			
	Capacitance	Phase 5	200% or less than initial value	
	ESR		Satisfy initial ratings	
	Current (30 minutes value)		1.5CV (mA) or below	
	Capacitance	Phase 6	Within ±20% of initial value	
	ESR		Satisfy initial ratings	
	Current (30 minutes value)		Satisfy initial ratings	
* Vibration resistance	Capacitance	Satisfy initial ratings		Conforms to 4.13 Frequency：10 to 55 Hz Testing time：6 hours
	ESR			
	Current (30 minutes value)			
	Appearance	No obvious abnormality		
* Solder heat resistance	Capacitance	Satisfy initial ratings		Cooled down to ambient temperature after reflow soldering, then the product must fulfill the condition stated left. (See page 10 for reflow condition)
	ESR			
	Current (30 minutes value)			
	Appearance	No obvious abnormality		
* Temperature cycle	Capacitance	Satisfy initial ratings		Conforms to 4.12 Temperature condition：−25℃→Room temperature→+70℃→Room temperature Number of cycles：5 Cycles
	ESR			
	Current (30 minutes value)			
	Appearance	No obvious abnormality		
* High temp. and high humidity resistance	Capacitance	Within ±20% of initial value		Conforms to 4.14 Temperature：40±2℃ Relative humidity：90 to 95 %RH Testing time：240±8 hours
	ESR	Not to exceed 120% of initial ratings		
	Current (30 minutes value)	Not to exceed 120% of initial ratings		
	Appearance	No obvious abnormality		
* High temperature load	Capacitance	Within ±30% of initial value		Conforms to 4.15 Voltage applied：MAX operating voltage Series protection resistance：0Ω Testing time：1000^{+48}_{0}Hours
	ESR	Below 200% of initial ratings		
	Current (30 minutes value)	Below 200% of initial ratings		
	Appearance	No obvious abnormality		
* Self discharge characteristics (voltage holding characteristics)		5.5V type: Voltage between terminal leads higher than 4.2V 3.5V type: Not specified	Charging condition	Voltage applied：5.0Vdc (Terminal at the case's side be negative) Series resistance：0Ω Charging time：24 hours
			Storage	Let stand for 24 hours in condition described below with terminals opened. Ambient temperature：Lower than 25℃ Relative humidity：Lower than 70%RH

As for items with “*”, it must fulfill the above condition after the reflow soldering. (See page 10 for reflow conditions)

	Current (30 minutes value)	Not to exceed 120% of initial ratings		
	Appearance	No obvious abnormality		
Characteristics in different temperature	Capacitance	Phase 2	50% or higher than initial value	Conforms to 4.17 Phase1：+25±2℃ Phase2：−25±2℃ Phase3：−40±2℃ Phase4：+25±2℃ Phase5：+70±2℃ Phase6：+25±2℃
	ESR		400% or less than initial value	
	Capacitance	Phase 3	30% or higher than initial value	
	ESR		700% or less than initial value	
	Capacitance	Phase 5	200% or less than initial value	
	ESR		Satisfy initial ratings	
	Current (30 minutes value)		1.5CV (mA) or below	
	Capacitance	Phase 6	Within ±20% of initial value	
	ESR		Satisfy initial ratings	
	Current (30 minutes value)		Satisfy initial ratings	
Lead strength (tensile)		No terminal damage		Conforms to 4.9
Vibration resistance	Capacitance	Satisfy initial ratings		Conforms to 4.13 Frequency：10 to 55 Hz Testing time：6 hours
	ESR			
	Current (30 minutes value)			
	Appearance	No obvious abnormality		
Solderability		Over 3/4 of the terminal should be covered by the new solder		Conforms to 4.11 Solder temp：245±5℃ Dipping time：5±0.5 sec. 1.6mm from the bottom should be dipped.
Solder heat resistance	Capacitance	Satisfy initial ratings		Conforms to 4.10 Solder temp：260±10℃ Dipping time：10±1 sec. 1.6mm from the bottom should be dipped.
	ESR			
	Current (30 minutes value)			
	Appearance	No obvious abnormality		
Temperature cycle	Capacitance	Satisfy initial ratings		Conforms to 4.12 Temperature condition：−40℃→Room temperature→+85℃→Room temperature Number of cycles：5 Cycles
	ESR			
	Current (30 minutes value)			
	Appearance	No obvious abnormality		
High temp. and high humidity resistance	Capacitance	Within ±20% of initial value		Conforms to 4.14 Temperature：40±2℃ Relative humidity：90 to 95 %RH Testing time：240±8 hours
	ESR	Not to exceed 120% of initial ratings		
	Current (30 minutes value)	Not to exceed 120% of initial ratings		
	Appearance	No obvious abnormality		
High temperature load	Capacitance	Within ±30% of initial value		Conforms to 4.15 Temperature：85±2℃ Voltage applied：MAX operating voltage Series protection resistance：0Ω Testing time：1000^{+48}_{0}Hours
	ESR	Below 200% of initial ratings		
	Current (30 minutes value)	Below 200% of initial ratings		
	Appearance	No obvious abnormality

Specifications

Item \ Series name		FY type (FYD, FYH, FYL)		Test conditions (conforming to JIS C 5160-1)	
Category temperature range		−25℃ to +70℃			
MAX operating voltage		5.5Vdc			
Capacitance		Refer to standard ratings		Refer to “Measurement Conditions”	
Capacitance allowance		+80 %, −20 %		Refer to “Measurement Conditions”	
ESR		FYD：0.022F to 2.2F FYH：0.022F to 1.0F FYL：0.010F to 0.047F		Measured at 1kHz, 10mA ; See also “Measurement Conditions”	
Current (30-minutes value)		Refer to standard ratings		Refer to “Measurement Conditions”	
Surge	Capacitance	More than 90% of initial ratings		Surge voltage：6.3V Charge：30 sec. Discharge：9min 30sec. Number of cycles：1000 Series resistance：0.010F 1500Ω ：0.022F 560Ω ：0.047F 300Ω ：0.068F 240Ω ：0.10F 150Ω ：0.22F 56Ω ：0.47F 30Ω ：1.0F, 1.4F 15Ω ：2.2F 10Ω Discharge resistance：0Ω Temperature：70±2℃	
	ESR	Not to exceed 120% of initial ratings			
	Current (30 minutes value)	Not to exceed 120% of initial ratings			
	Appearance	No obvious abnormality			
Characteristics in different temperature	Capacitance	Phase 2	50% or higher than initial value	Conforms to 4.17 Phase1：+25±2℃ Phase2：−25±2℃ Phase4：+25±2℃ Phase5：+70±2℃ Phase6：+25±2℃	
	ESR		400% or less than initial value		
	Capacitance	Phase 3			
	ESR				
	Capacitance	Phase 5	200% or less than initial value		
	ESR		Satisfy initial ratings		
	Current (30 minutes value)		1.5CV (mA) or below		
	Capacitance	Phase 6	Within ±20% of initial value		
	ESR		Satisfy initial ratings		
	Current (30 minutes value)		Satisfy initial ratings		
Lead strength (tensile)		No terminal damage		Conforms to 4.9	
Vibration resistance	Capacitance	Satisfy initial ratings		Conforms to 4.13 Frequency：10 to 55 Hz Testing time：6 hours	
	ESR				
	Current (30 minutes value)				
	Appearance	No obvious abnormality			
Solderability		Over 3/4 of the terminal should be covered by the new solder		Conforms to 4.11 Solder temp：245±5℃ Dipping time：5±0.5 sec. 1.6mm from the bottom should be dipped.	
Solder heat resistance	Capacitance	Satisfy initial ratings		Conforms to 4.10 Solder temp：260±10℃ Dipping time：10±1 sec. 1.6mm from the bottom should be dipped.	
	ESR				
	Current (30 minutes value)				
	Appearance	No obvious abnormality			
Temperature cycle	Capacitance	Satisfy initial ratings		Conforms to 4.12 Temperature condition：−25℃→Room temperature→+70℃→Room temperature Number of cycles：5 Cycles	
	ESR				
	Current (30 minutes value)				
	Appearance	No obvious abnormality			
High temp. and high humidity resistance	Capacitance	Within ±20% of initial value		Conforms to 4.14 Temperature：40±2℃ Relative humidity：90 to 95 %RH Testing time：240±8 hours	
	ESR	Not to exceed 120% of initial ratings			
	Current (30 minutes value)	Not to exceed 120% of initial ratings			
	Appearance	No obvious abnormality			
High temperature load	Capacitance	Within ±30% of initial value		Conforms to 4.15 Temperature：70±2℃ Voltage applied：MAX operating voltage Series protection resistance：0Ω Testing time：1000^{+48}_{0}Hours	
	ESR	Below 200% of initial ratings			
	Current (30 minutes value)	Below 200% of initial ratings			
	Appearance	No obvious abnormality			
Self discharge characteristics (voltage holding characteristics)		Voltage between terminal leads higher than 4.2V		Charging condition	Voltage applied：5.0Vdc (Terminal at the case's side be negative) Series resistance：0Ω Charging time：24 hours
				Storage	Let stand for 24 hours in condition described below with terminals opened. Ambient temperature：Lower than 25℃ Relative humidity：Lower than 70%RH

7. Packing

1. FM Series

(1) Bulk

- Packing method：Pack in vinyl bags then pack them into cardboard boxes.
- Standard packing quantity：1000pcs (100pcs / vinyl bag×10)
  However：FM0H104ZF-L1 and FM0H224ZF-L1＝800pcs, FMC0H334ZF＝400pcs, FMC0H334ZF-L1＝300pcs

(2) Taping

- Packing method：Ammo pack
- Standard packing quantity：1000pcs However, FMC0H334ZFTP( ) = 400pcs

2. FC Series

Part name	Packing unit
FC0H473ZFTBR24	1000 PCS. / reel
FC0H104ZFTBR24	1000 PCS. / reel
FC0H224ZFTBR24	500 PCS. / reel
FC0H474ZFTBR32-SS	200 PCS. / reel
FC0H105ZFTBR44-SS	150 PCS. / reel
FC0V104ZFTBR24	1000 PCS. / reel
FC0V224ZFTBR24	1000 PCS. / reel
FC0V474ZFTBR24	500 PCS. / reel
FCS0H473ZFTBR24	1000 PCS. / reel
FCS0H104ZFTBR24	1000 PCS. / reel
FCS0H224ZFTBR24	500 PCS. / reel
FCS0V104ZFTBR24	1000 PCS. / reel
FCS0V224ZFTBR24	1000 PCS. / reel
FCS0V474ZFTBR24	500 PCS. / reel
FCH0V683ZFTBR16	1500 PCS. / reel
FCH0H433ZFTBR16	1500 PCS. / reel

3. FG, FT, FS, FR, FY, FA Series

(1) Bulk (Small type)

- Packing method：Pack in vinyl bags then pack them into cardboard boxes.
- Standard packing quantity: see chart below.

(Unit：Pises)

Series name / Capacitance	FA		FE	FS		FY			FR	FG	FT
	5.5V type	11V type		5.5V type	11V type, 12V type	FYD	FYH	FYL

5.6F	—	—	—	—	—	—	—	—	—	—	20

4. Winded type (HV Series)

- Packing method：Pack in vinyl bags then pack them into cardboard boxes.
- Standard packing quantity：320pcs (10F), 224pcs (22F), 120pcs (50F), 80pcs (100F)

2010.11.8 9565SCAVOL12E

8. List of Plating Type and Sleeve Type

By changing the solder plating from leaded solder to lead-free solder, and the outer tube material of can-cased conventional SuperCapacitor from polyvinyl chloride to Polyethylene Terephathatate (PET), our new SuperCapacitor has now became even more friendlier to the environment.

a. Iron + copper base + lead-free solder plating (Sn-1Cu)
b. SUS nickel base + copper base + reflow lead-free solder plating (100% Sn, reflow processed)
c. Iron + copper base + lead-free solder plating (100% Sn)

Series	Part Number	Plating	Sleeve
FA	All FA Series	a	PET (Blue)
FE	All FE Series	a	PET (Blue)
FS	All FS Series	a	PET (Blue)
FR	All FR Series	a	PET (Blue)

Recommended Pb-free solder : Sn / 3.5Ag / 0.75Cu
Sn / 3.0Ag / 0.5Cu
Sn / 0.7Cu
Sn / 2.5Ag / 1.0Bi / 0.5Cu

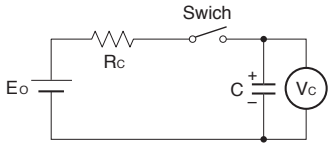
2010.11.8 9565SCAVOL12E

9. Measurement Conditions

(1) Capacitance (Charge System)

Capacitance is calculated from expression (9) by measuring the charge time constant (τ) of the capacitor (C). Prior to measurement, short between both pins of the capacitor for 30 minutes or more to let it discharge. In addition, follow the indication of the product when determining the polarity of the capacitor during charging.

Capacitance: $C = \frac{\tau}{R_C}$ (F) (9)



E_O: 3.0 (V) ··· Product with maximum operating voltage 3.5 V
5.0 (V) ··· Product with maximum operating voltage 5.5 V
6.0 (V) ··· Product with maximum operating voltage 6.5 V
10.0 (V) ··· Product with maximum operating voltage 11 V
12.0 (V) ··· Product with maximum operating voltage 12 V

τ : Time from start of charging until Vc becomes $0.632E_0$ (V) (sec)

R_C:See table below (Ω).

*Capacitance values according to the constant current discharge method.

Table 3 Capacitance measurement

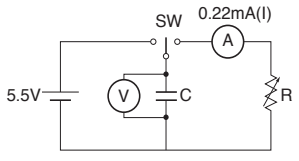
Capacitance (Discharge System)

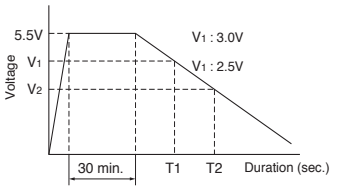
In the diagram below, charging is performed for a duration of 30 minutes, once the voltage of the condensor terminal reaches 5.5 V.

Then, use a constant current load device and measure the time for the terminal voltage to drop from 3.0 to 2.5 V upon discharge at 0.22 mA for 0.22 F, for example, and calculate the static capacitance according to the equation shown below.

Note: The current value is 1 mA discharged per 1F.

Capactance : $C = \frac{I \times (T_2 - T_1)}{V_1 - V_2}$ (F)





2010.11.8 9565SCAVOL12E

10. ⚠Notes on Using Super Capacitor (Electric Double-Layer Capacitor)

1. Circuitry design

1.1 Useful life

The electrical double layered capacitor (super capacitor) uses electrolyte and is sealed with rubber etc. Water in the electrolyte can evaporate in use over long periods at high temperatures, thus reducing electrostatic capacity which in turn will create greater internal resistance. The characteristics of the super capacitor can vary greatly depending on the environment it is used in. Therefore, controlling the usage environment will ensure prolonged life of the part.
Basic breakdown mode is an open mode due to increased internal resistance.

1.2 Fail rate in the field

Based on field data, the fail rate is calculated at approx. 0.006Fit. We estimate that unreported failures are ten times this amount. Therefore, we assume that the fail rate is below 0.06Fit.

1.3 Voltage application when maximum usable voltage is exceeded

Performance may be compromised, and in some cases leakage or damage may occur if applied voltage exceeds maximum working voltage.

1.4 Use of capacitor as a smoothing capacitor (ripple absorption) in electrical circuits

As super capacitors contain a high level of internal resistance, they are not recommended for use as electrical smoothing capacitors in electrical circuits.
Performance may be compromised, and in some cases leakage or damage may occur if a super capacitor is used in ripple absorption.

1.5 Series connections

As applied voltage balance to each super capacitor is lost when used in series connection, excess voltage may be applied to some super capacitors, which will not only negatively affect its performance but may also cause leakage and/or damage.
Allow ample margin for maximum voltage or attach a circuit for applying equal voltage to each super capacitor (partial pressure resistor/voltage divider) when using super capacitors in series connection.
Also, arrange super capacitors so that the temperature between each capacitor will not vary.

1.6 Outer sleeve insulation

The outer sleeve wrapped around the super capacitor indicates that it is sealed, however the outer sleeve is not guaranteed for insulation purposes. Therefore, it cannot be used where insulation is necessary.

1.7 Polar characteristics

The super capacitor is manufactured so that the terminal on the outer case is negative (-). Align the (-) symbol during use. Even though discharging has been carried out prior to shipping, any residual electrical charge may negatively affect other parts.

1.8 Use next to heat emitters

Useful life of the super capacitor will be significantly affected if used near heat emitting items (coils, power transistors, and posistors etc) where the super capacitor itself may become heated.

1.9 Usage environment

This device cannot be used in any acidic, alkaline or similar type of environment.

2010.11.8 9565SCAVOL12E

1.10 Super capacitors fitted with pressure valves

HV series super capacitors are fitted with pressure valves Make an opening in the top of the pressure valve to avoid any damage to the super capacitor when the pressure valve is in use. Allow at least a 2mm opening for models with a diameter of ϕ18mm or less, and at least a 3mm opening for models with a diameter of ϕ22mm.

2. Mounting

2.1 Mounting onto a reflow furnace

Except for the FC series, it is not possible to mount this capacitor onto an IR / VPS reflow furnace. Do not immerse the capacitor into a soldering dip tank.

2.2 Flow soldering conditions

Keep solder under 260℃ and soldering time to within 10 seconds when using the flow automatic soldering method. (Except for the FC and HV series)

2.3 Installation using a soldering iron

Care must be taken to prevent the soldering iron from touching other parts when soldering. Keep the tip of the soldering iron under 400℃ and soldering time to within 3 seconds. Always make sure that the temperature of the tip is controlled. Internal capacitor resistance is likely to increase if the terminals are overheated.

2.4 Lead terminal processing

Do not attempt to bend or polish the capacitor terminals with sand paper etc. Soldering may not be possible if the metallic plating is removed from the top of the terminals.

2.5 Cleaning, Coating, and Potting

Except for the FM series, cleaning, coating, and potting must not be carried out. Consult us if this type of procedure is necessary.

Terminals should be dried at less than the maximum operating temperature after cleaning.

3. Storage

3.1 Temperature and Humidity

Make sure that the super capacitor is stored according to the following conditions: Temp.: 5～35℃ (Standard 25), Humidity: 20～70% (Standard: 50%). Do not allow the build up of condensation through sudden temperature change.

3.2 Environment conditions

Make sure that there are no corrosive gasses like sulfur dioxide as penetration of the lead terminals is possible.

Always store this item in an area with low dust and dirt levels.

Make sure that the packaging will not be deformed through heavy loading, movement and/or knocks.

Keep out of direct sunlight, and away from radiation, static electricity, and magnetic fields.

3.3 Maximum storage period

This item may be stored up to one year from the date of delivery if stored at the conditions stated above.

This product should be safe to use even after being stored for over a 1 year period. However, depending on the storage conditions, we recommend that the soldering is checked.

4. Dismantling

There is a small amount of electrolyte stored within thecapacitor. Do not attempt to dismantle as direct skin contact with the electrolyte will cause burning.

This product should be treated as industrial waste and not is not to be disposed of by fire.

2010.11.8 9565SCAVOL12E

When using our products, the following precautions should be taken.

(1) Safety designing of an apparatus or a system allowing for failures of electronic components used in the system

In general, failures will occur in electronic components at a certain probability. NEC TOKIN makes every effort to improve the quality and reliability of electronic component products. However, it is impossible to completely eliminate the probability of failures. Therefore, when using NEC TOKIN's electronic component products, systems should be carefully designed to ensure redundancy in the event of an accident which would result in injury or death, fire, or social damage, to ensure the prevention of the spread of fire, and the prevention of faulty operation. (Please refer to pre-cautions to be taken when using SuperCapacitor capacitors for the details of failures.)

(2) Quality level of various kinds of parts, and equipment in which the parts can be utilized
Electronic components have a standard quality level unless otherwise specified.

NEC TOKIN classifies the level of quality of electronic component products into three levels, in order from a lower level, a standard quality level, a special quality level, and a custom quality level in which a customer individually specifies a quality assurance program. Each of the quality levels has recommended applications.
If a user wants to use the electronic parts having a standard quality level in applications other than the applications specified for the standard quality level, they should always consult a member of our company's sales staff before using the electronic parts.

Standard quality level:	Computers, office automation equipment, communications equipment, measuring instruments, AV equipment, household electrical appliances, machine tools, personal equipment, industrial robots
Special quality level:	Transportation equipment (automobiles, railways, shipping, or the like), traffic signals, disaster prevention/crime prevention systems, safety devices, and medical equipment which is not directly intended for life-support purposes
Custom quality level:	Equipment for airplanes, aerospace equipment, nuclear power control systems, and medical equipment, apparatus or systems for life-support purposes

Unless otherwise shown, the quality level of NEC TOKIN's electronic component products included in documents such as catalogues, data sheets or data books is the standard quality level.

(3) This manual is subject to change without notice.

The contents of this manual are based on data which is correct as of July 2010, and they may be changed without notice. If our products are used for mass-production design, please cousult with a member of our company's sales staff by way of precaution.

(4) Reprinting and copying of this manual without prior written permission from NEC TOKIN Corporation are not permitted.

(5) Industrial property problems

In the event any problems associated with industrial property of a third party arising as a result of the use of our products, NEC TOKIN assumes no responsibility for problems other than problems directly associated with the constitution and manufacturing method of the products.

(6) Should any of these products come under the category of strategic goods or services (according to Japan's foreign trade and foreign exchange regulations), the sender must obtain an export license from the Japanese Government befor said products can be exported outside Japan.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits,General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
