GENERAL DESCRIPTION

The ACT41X is a high performance peak current mode PWM controller which applies *ActivePSRTM* and *ActiveQRTM* technology. ACT41X achieves accurate voltage regulation without the need of an opto-coupler or reference device.

The ACT41X is designed to achieve less than 100mW Standby Power. By applying frequency fold back and *ActiveQRTM* technology, ACT41X exceeds the latest ES2.0 efficiency standard.

ACT41X integrates comprehensive protection. In case of over temperature, over voltage, short winding, short current sense resistor, open loop

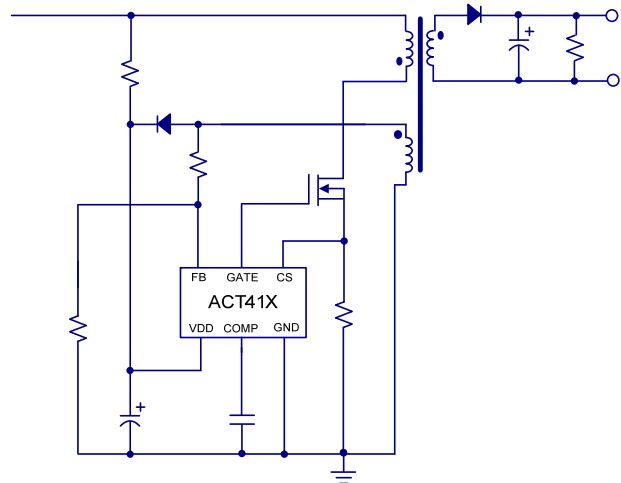

and overload conditions, it would enter auto restart mode including cycle-by-cycle current limiting.

ACT41X is to achieve no overshoot and very short rise time even with big capacitive load (4000 μ F) with the built-in fast and soft start process, .

The Quasi-Resonant (QR) operation mode can effectively improve efficiency, reduce the EMI noise and further reduce the components in input filter.

ACT41X is idea for application up to 36 Watt.
