

LUXEON Rebel, Red-Orange & Amber

High flux solution for signaling applications

Automotive grade LUXEON Rebel LEDs are designed and tested to meet and exceed expectations for reliability, performance and lifetime in all vehicle applications. LUXEON Rebel Red-Orange and Amber LEDs are particularly advantageous for both efficient light guide coupling and automotive tail applications, and for high brightness automotive applications. Lumileds automotive color binning structure meets both SAE and ECE color specifications. LUXEON Rebel meets both SAE and ECE color specifications and provides finer granularity than existing systems.

FEATURES AND BENEFITS

- High flux output provides flexibility in styling and optical design
- Low forward voltage results in higher efficacy and lower solution costs
- Electrically isolated thermal pad to reduce thermal management engineering costs
- AEC-Q101C qualified and PPAP documentation available

PRIMARY APPLICATIONS

- Rear Fog
- Side Marker
- Stop/Tail
- Turn

General Information

Part Number Nomenclature

LUXEON Rebel is tested and binned at 350mA.

The part number designation is explained as follows:

L X M A - A B C D - E F G H

Where:

- A — designates radiation pattern (value P for Lambertian)
- B — designates color variant (L for amber, H for red-orange)
- C — designates color variant (0 for automotive amber and red-orange)
- D — designates technology (1 for automotive amber and red-orange standard flux direct color; 2 for red-orange high flux direct color)
- E — reserved for future product offerings
- FGH — minimum luminous flux (lm) performance

Products tested and binned at 350mA follow the part numbering scheme:

L X M A - P x 0 x - x x x x

LED Lifetime Characteristics

Lifetime for solid state lighting devices (LEDs) is defined in terms of lumen maintenance - the percentage of initial light output remaining after a specified period of time - and light output failures such as shorts. These two degradation modes are both considered in Lumileds LED lifetime assessment.

LED lifetime performance is based on independent test data, Lumileds historical data from tests run on similar material systems, and internal product reliability testing.

Please contact your Lumileds Sales Representative for LUXEON LED product lifetime assessment for your operational conditions.

Environmental Compliance

Lumileds is committed to providing environmentally friendly products to the solid-state lighting market. The LUXEON Rebel is compliant to the European Union directives on the restriction of hazardous substances in electronic equipment, namely the REACH, ELV, and RoHS directives. Lumileds will not intentionally add the following restricted materials to the LUXEON Rebel: lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE).

Note for Table 1:

1. Minimum luminous flux performance guaranteed within published operating conditions. Lumileds maintains a tolerance of $\pm 6.5\%$ on flux measurements.
2. Typical luminous flux or radiometric power performance when device is operated within published operating conditions.
3. LUXEON Rebel products with even higher luminous flux and radiometric power levels will become available in the future. Please consult Lumileds for more information.
4. Junction Temperature is estimated based on instant measurement at thermal pad temperature of 25°C .
5. Please contact Lumileds for information on custom part numbers.

Amber	587.0 nm	590.0 nm	592.0 nm	14	0.10	160	125

Notes for Table 2:

1. LUXEON Rebel is tested and binned at 350mA.
2. Dominant wavelength is derived from the CIE 1931 Chromaticity diagram and represents the perceived color. Lumileds maintains a tolerance of ± 0.5 nm for dominant wavelength measurements.
3. Spectral width at 1/2 of the peak intensity.
4. Total angle at which 90% of total luminous flux is captured.
5. Viewing angle is the off axis angle from lamp centerline where the luminous intensity is 1/2 of the peak value.
6. Junction temperature is estimated based on instant measurement at thermal pad temperature of 25°C .

Notes for Table 3:

1. Lumileds maintains a tolerance of $\pm 0.06\text{V}$ on forward voltage measurements.
2. Measured between $T_j = 25^\circ\text{C} - 110^\circ\text{C}$ at $I_f = 350\text{mA}$.
3. Does not include wall plug efficiency.
4. Dynamic resistance is the inverse of the slope in the linear forward voltage model for LEDs. See Forward Voltage vs. Forward Current curves.

Automotive Product Binning and Labeling

Purpose of Product Binning

In the manufacturing of semiconductor products, there is a variation of performance around the average values given in the technical data sheets. For this reason, Lumileds bins the LED components for luminous flux, color and forward voltage (V_F).

Decoding Product Bin Labeling

LUXEON Rebel emitters are labeled using a three or four digit alphanumeric code (CAT code) depicting the bin values for emitters packaged on a single reel. All emitters packaged within a reel are of the same 3-variable bin combination. Using these codes it is possible to determine optimum mixing and matching of products for consistency in a given application.

Format of Labeling for Emitters

Reels of amber emitters are labeled with a three digit alphanumeric CAT code following the format below.

ABC

A = Flux bin (P, Q, R, S, etc.)

B = Color bin (2, 4, etc.)

C = V_F bin (E, F, G, etc.)

Luminous Flux Bins

Table 8 lists the standard photometric luminous flux bins for LUXEON Rebel emitters.

Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all colors.

Table 8. Flux Bins - All Colors

Bin Code	Minimum Photometric Flux (lm)	Maximum Photometric Flux (lm)
E	23.5	30

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
