Approvals & Compliances

RN chokes are attenuating common-mode or asymmetric (P/N → E) interference signals, by being connected in series with the phase and neutral lines of an AC powerline input. Symmetrical components of the noise are also attenuated by the leakage inductance (stray inductance) of the windings. These chokes are typically used in conjunction with suppression capacitors.

Features and benefits

- | High saturation resistance and excellent thermal behavior
- | Through hole pin connections
- | Dual-choke configuration
- | Small compact design
- | Multiple housing options
- | Custom-specific versions are available on request
- | Higher temperature versions
- | Fully potted design usable for ruggedized applications

Typical applications

- | Switch-mode power applications
- | Suppressing common-mode interference levels
- | EMI input filters
- | For suppression-equipment with no earth connection
- | Phase-angle control circuits in combination with saturating chokes

 Stray Inductance measurement between pin 1 and 2 (pin 3 and 4 shorted)
 For mechanical tolerances refer to mechanical data section.

Thermal Derating

If higher ambient temperatures than the specified apply, the nominal current needs to be reduced according to the graph below.

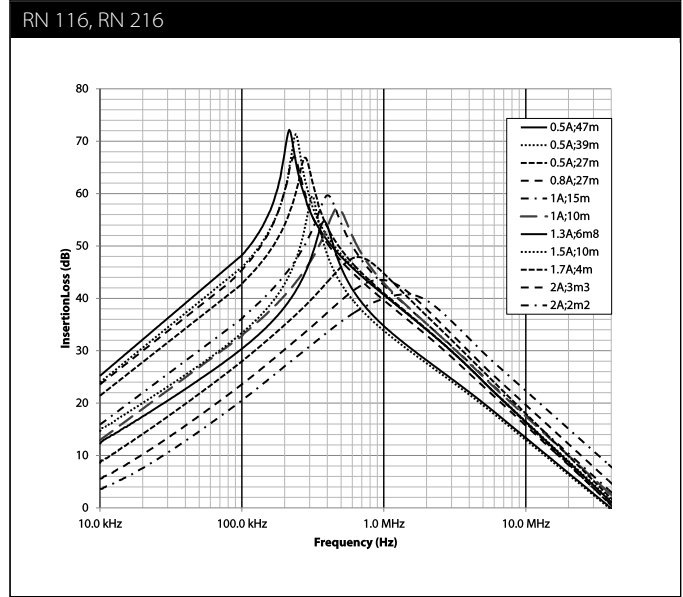

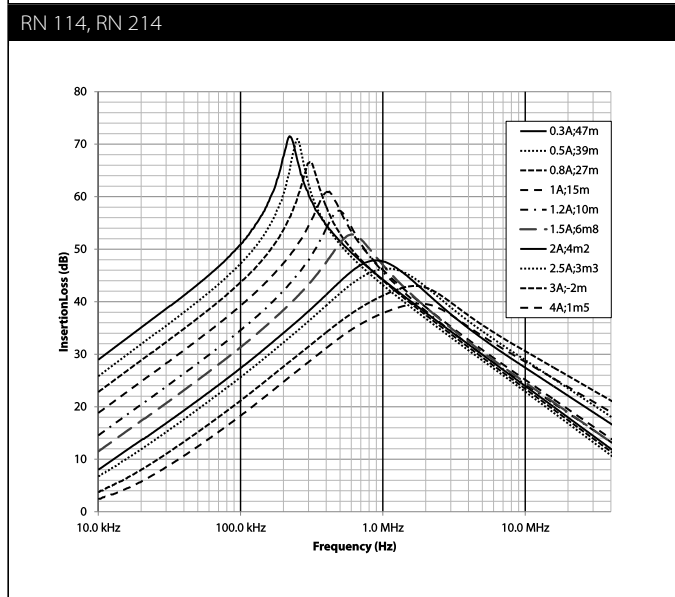

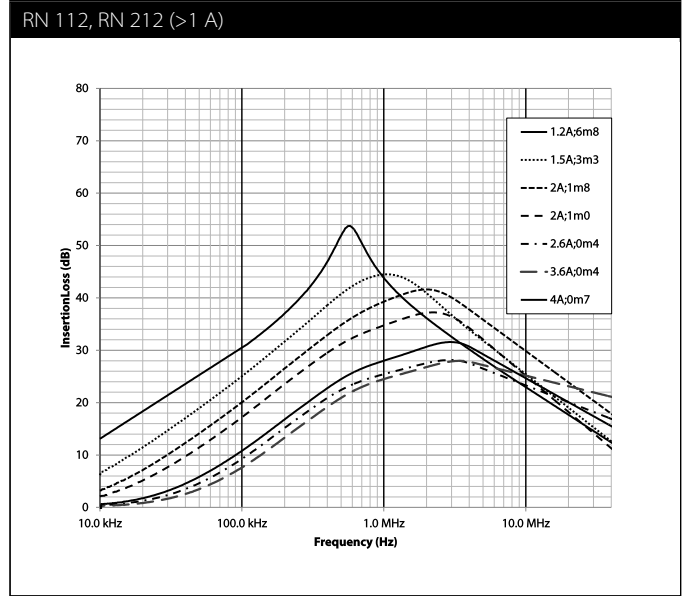

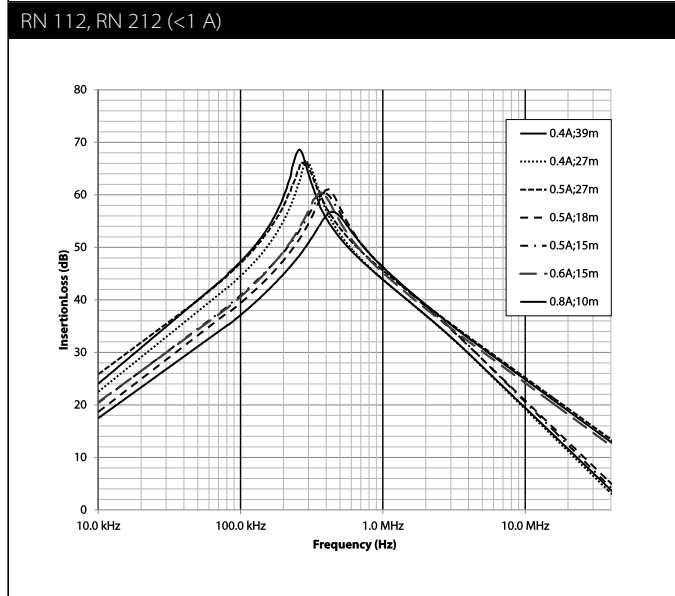

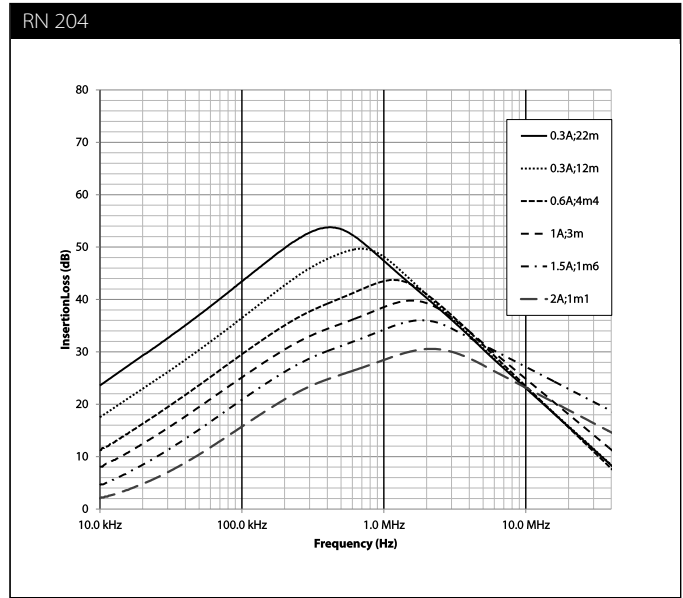

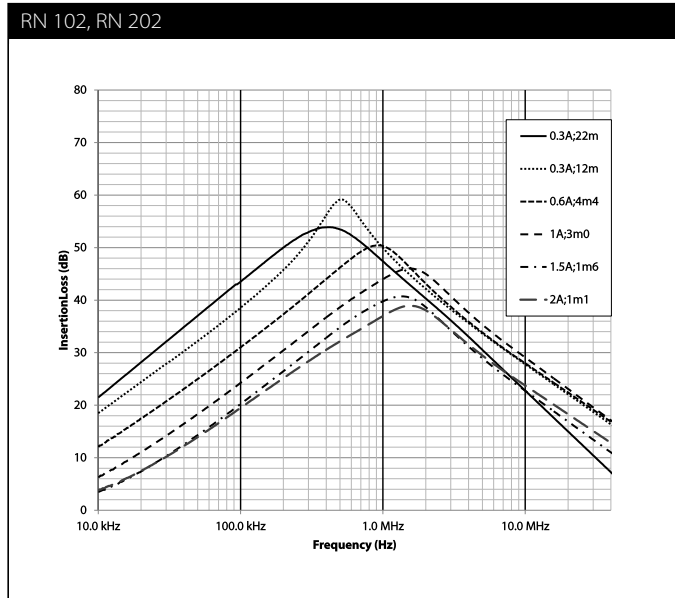

Graph on the left side applies to RN with rated ambient temperature of 40 °C, right side for rated ambient temperature of 60 °C.

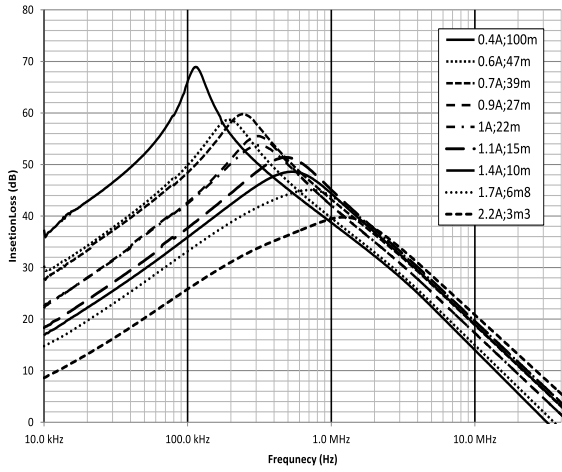

Typical attenuation/resonance frequency characteristics

Per CISPR 17; 50 Ω/50 Ω asym

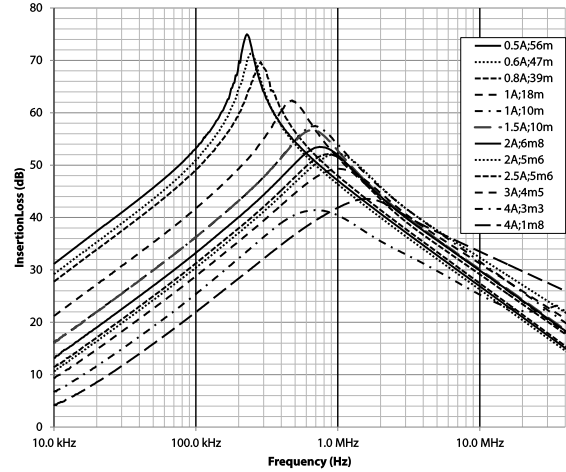

X can be exchanged with either 1 or 2 for different housing configuration, attenuation is similar
