93AA76A/B/C, 93LC76A/B/C, 93C76A/B/C

8K Microwire Compatible Serial EEPROM

Device Selection Table

Part Number	Vcc Range	ORG Pin	PE Pin	Word Size	Temp Ranges	Packages
93AA76A	1.8-5.5	No	No	8-bit	I	P, SN, ST, MS, OT
93AA76B	1.8-5-5	No	No	16-bit	I	P, SN, ST, MS, OT
93LC76A	2.5-5.5	No	No	8-bit	I, E	P, SN, ST, MS, OT
93LC76B	2.5-5.5	No	No	16-bit	I, E	P, SN, ST, MS, OT
93C76A	4.5-5.5	No	No	8-bit	I, E	P, SN, ST, MS, OT
93C76B	4.5-5.5	No	No	16-bit	I, E	P, SN, ST, MS, OT
93AA76C	1.8-5.5	Yes	Yes	8- or 16-bit	I	P, SN, ST, MS, MC, MN
93LC76C	2.5-5.5	Yes	Yes	8- or 16-bit	I, E	P, SN, ST, MS, MC, MN
93C76C	4.5-5.5	Yes	Yes	8- or 16-bit	I, E	P, SN, ST, MS, MC, MN

Features:

- Low-Power CMOS Technology
- ORG Pin to Select Word Size for '76C' Version
- 1024 x 8-bit Organization 'A' Devices (no ORG)
- 512 x 16-bit Organization 'B' Devices (no ORG)
- Program Enable Pin to Write-Protect the Entire Array ('76C' version only)
- Self-Timed Erase/Write Cycles (including Auto-Erase)
- Automatic ERAL Before WRAL
- Power-On/Off Data Protection Circuitry
- Industry Standard 3-Wire Serial I/O
- Device Status Signal (Ready/$\overline{\text{Busy}}$)
- Sequential Read Function
- 1,000,000 Erase/Write Cycles
- Data Retention > 200 Years
- Pb-free and RoHS Compliant
- Temperature Ranges Supported:
  - Industrial (I) -40°C to +85°C
  - Automotive (E) -40°C to +125°C

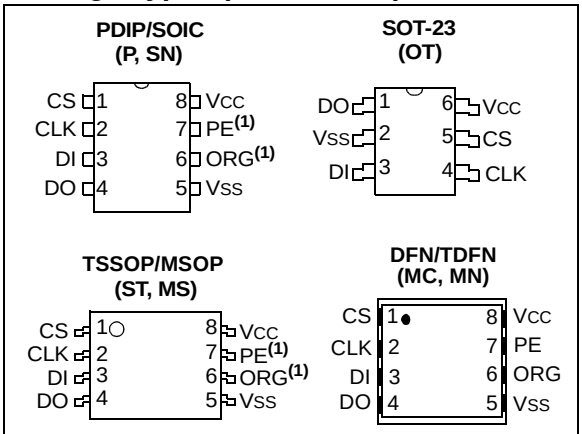
Pin Function Table

Name	Function
CS	Chip Select
CLK	Serial Data Clock
DI	Serial Data Input
DO	Serial Data Output
VSS	Ground
PE	Program Enable – 93XX76C only
ORG	Memory Configuration – 93XX76C only
VCC	Power Supply

Description:

The Microchip Technology Inc. 93XX76A/B/C devices are 8Kbit, low-voltage, serial Electrically Erasable PROMs (EEPROM). Word-selectable devices such as the 93XX76C are dependent upon external logic levels driving the ORG pin to set word size. The 93XX76A devices provide dedicated 8-bit memory organization, while the 93XX76B devices provide dedicated 16-bit memory organization. A Program Enable (PE) pin allows the user to write-protect the entire memory array. Advanced CMOS technology makes these devices ideal for low-power, nonvolatile memory applications. The 93XX Series is available in standard packages including 8-lead PDIP and SOIC, and advanced packaging including 8-lead MSOP, 6-lead SOT-23, 8-lead 2x3 DFN/TDFN and 8-lead TSSOP. All packages are Pb-free (Matte Tin) finish.

Package Types (not to scale)



Note 1: 93XX76C only.

1.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings (†)

VCC.....7.0V

All inputs and outputs w.r.t. VSS ..... -0.6V to VCC +1.0V

Storage temperature .....-65°C to +150°C

Ambient temperature with power applied.....-40°C to +125°C

ESD protection on all pins .....≥ 4 kV

† NOTICE: Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

TABLE 1-1: DC CHARACTERISTICS

All parameters apply over the specified ranges unless otherwise noted.			Industrial (I): TA = -40°C to +85°C, VCC = +1.8V to 5.5V Automotive (E): TA = -40°C to +125°C, VCC = +2.5V to 5.5V

EWDS	1	00	0	0	x	x	x	x	x	x	x	x	x	—	High-Z	14

2.0 FUNCTIONAL DESCRIPTION

When the ORG pin (93XX76C) is connected to VCC, the (x16) organization is selected. When it is connected to ground, the (x8) organization is selected. Instructions, addresses and write data are clocked into the DI pin on the rising edge of the clock (CLK). The DO pin is normally held in a High-Z state except when reading data from the device, or when checking the Ready/Busy status during a programming operation. The Ready/Busy status can be verified during an Erase/Write operation by polling the DO pin; DO low indicates that programming is still in progress, while DO high indicates the device is ready. DO will enter the High-Z state on the falling edge of CS.

2.1 Start Condition

The Start bit is detected by the device if CS and DI are both high with respect to the positive edge of CLK for the first time.

Before a Start condition is detected, CS, CLK and DI may change in any combination (except to that of a Start condition), without resulting in any device operation (Read, Write, Erase, EWEN, EWDS, ERAL or WRAL). As soon as CS is high, the device is no longer in Standby mode.

An instruction following a Start condition will only be executed if the required opcode, address and data bits for any particular instruction are clocked in.

Note:	When preparing to transmit an instruction, either the CLK or DI signal levels must be at a logic low as CS is toggled active high.

2.2 Data In/Data Out (DI/DO)

It is possible to connect the Data In and Data Out pins together. However, with this configuration it is possible for a “bus conflict” to occur during the “dummy zero” that precedes the read operation if A0 is a logic high-level. Under such a condition the voltage level seen at Data Out is undefined and will depend upon the relative impedances of Data Out and the signal source driving A0. The higher the current sourcing capability of the driver, the higher the voltage at the Data Out pin. In order to limit this current, a resistor should be connected between DI and DO.

2.3 Data Protection

All modes of operation are inhibited when VCC is below a typical voltage of 1.5V for ‘93AA’ and ‘93LC’ devices or 3.8V for ‘93C’ devices.

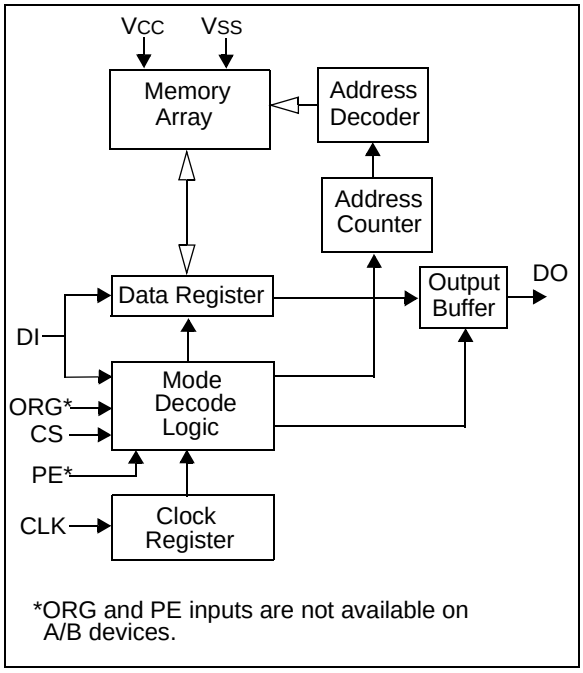
The EWEN and EWDS commands give additional protection against accidentally programming during normal operation.

Note:	For added protection, an EWDS command should be performed after every write operation and an external 10 kΩ pull-down protection resistor should be added to the CS pin.

After power-up the device is automatically in the EWDS mode. Therefore, an EWEN instruction must be performed before the initial ERASE or WRITE instruction can be executed.

Note:	To prevent accidental writes to the array in the 93XX76C devices, set the PE pin to a logic low.

Block Diagram



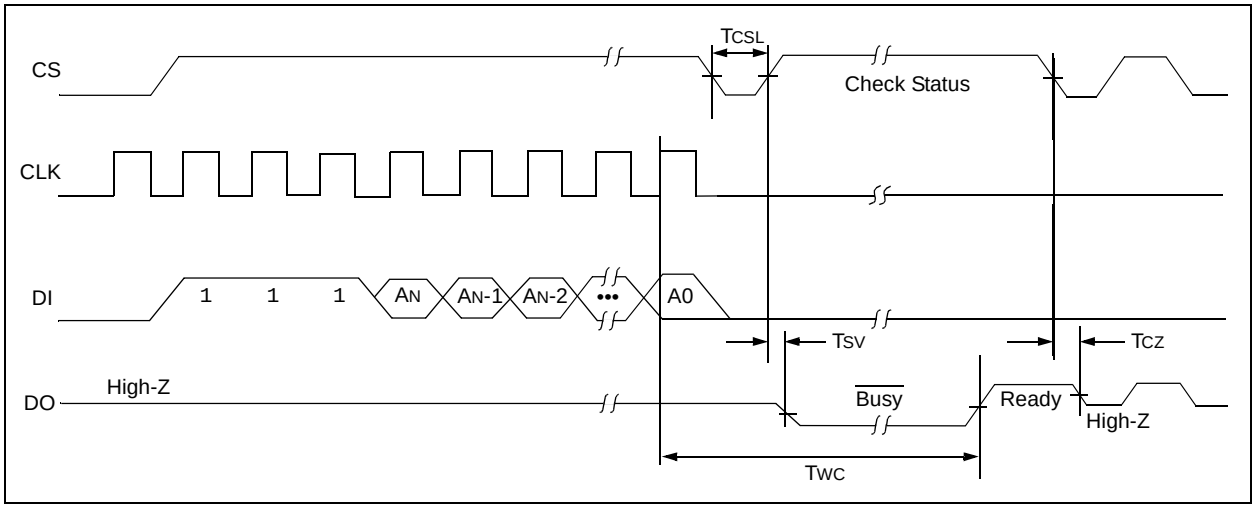
2.4 Erase

The ERASE instruction forces all data bits of the specified address to the logical '1' state. The rising edge of CLK before the last address bit initiates the write cycle.

The DO pin indicates the Ready/$\overline{\text{Busy}}$ status of the device if CS is brought high after a minimum of 250 ns low (T_{CSL}). DO at logical '0' indicates that programming is still in progress. DO at logical '1' indicates that the register at the specified address has been erased and the device is ready for another instruction.

Note:	After the Erase cycle is complete, issuing a Start bit and then taking CS low will clear the Ready/$\overline{\text{Busy}}$ status from DO.

FIGURE 2-1: ERASE TIMING



2.5 Erase All (ERAL)

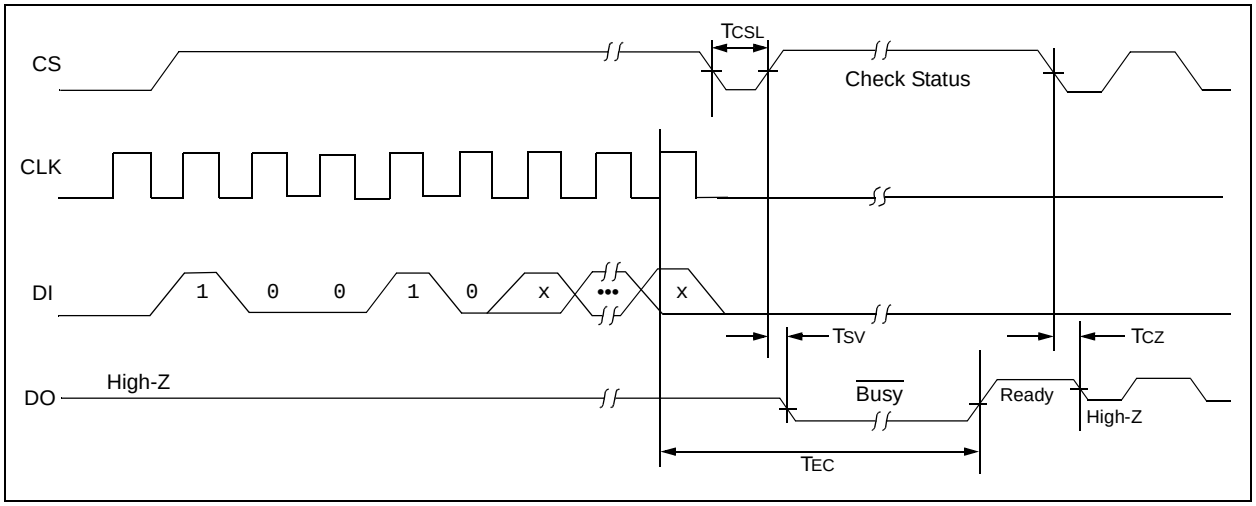
The Erase All (ERAL) instruction will erase the entire memory array to the logical '1' state. The ERAL cycle is identical to the erase cycle, except for the different opcode. The ERAL cycle is completely self-timed. The rising edge of CLK before the last data bit initiates the write cycle. Clocking of the CLK pin is not necessary after the device has entered the ERAL cycle.

The DO pin indicates the Ready/$\overline{\text{Busy}}$ status of the device, if CS is brought high after a minimum of 250 ns low (T_{CSL}).

Note:	After the ERAL command is complete, issuing a Start bit and then taking CS low will clear the Ready/$\overline{\text{Busy}}$ status from DO.

V_{CC} must be ≥4.5V for proper operation of ERAL.

FIGURE 2-2: ERAL TIMING



2.6 Erase/Write Disable and Enable (EWDS/EWEN)

The 93XX76A/B/C powers up in the Erase/Write Disable (EWDS) state. All programming modes must be preceded by an Erase/Write Enable (EWEN) instruction.

Once the EWEN instruction is executed, programming remains enabled until an EWDS instruction is executed or VCC is removed from the device.

To protect against accidental data disturbance, the EWDS instruction can be used to disable all erase/write functions and should follow all programming operations. Execution of a READ instruction is independent of both the EWEN and EWDS instructions.

FIGURE 2-3: EWDS TIMING

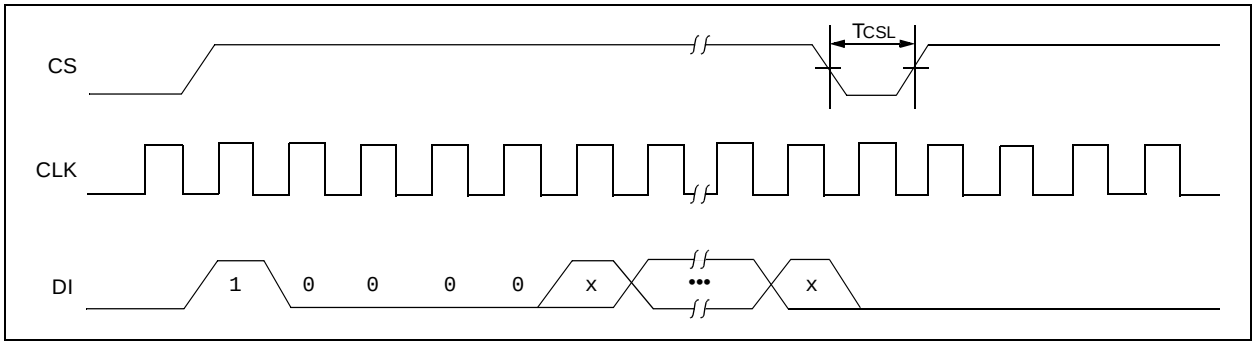


FIGURE 2-4: EWEN TIMING

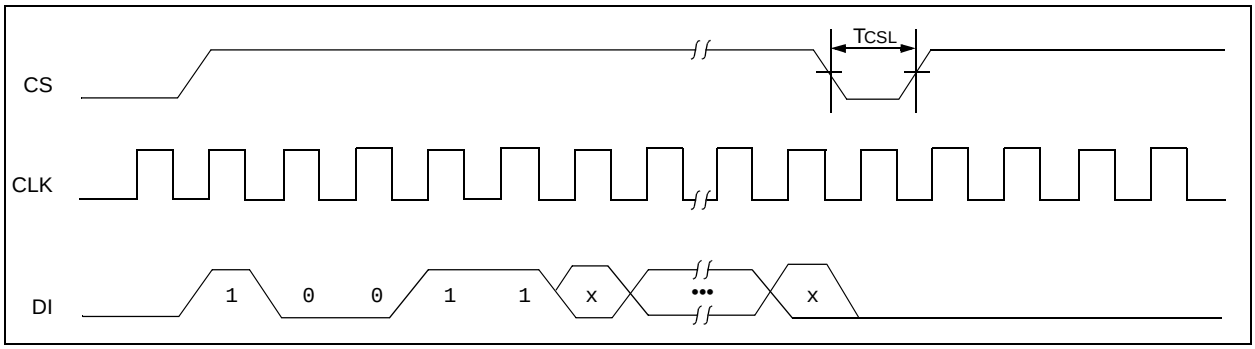
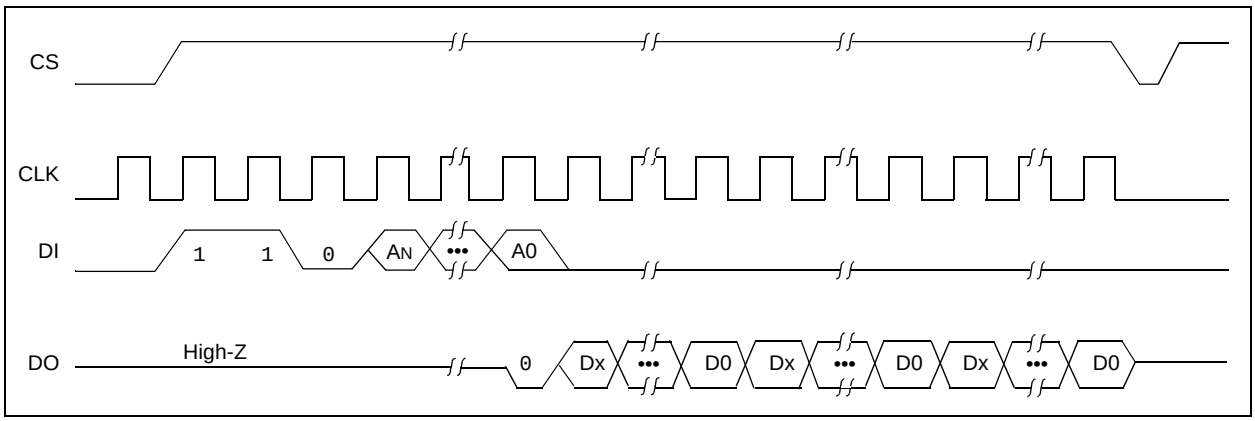


2.7 Read

The READ instruction outputs the serial data of the addressed memory location on the DO pin. A dummy zero bit precedes the 8-bit (If ORG pin is low or A-version devices) or 16-bit (If ORG pin is high or B-version devices) output string.

The output data bits will toggle on the rising edge of the CLK and are stable after the specified time delay (TPD). Sequential read is possible when CS is held high. The memory data will automatically cycle to the next register and output sequentially.

FIGURE 2-5: READ TIMING



2.8 Write

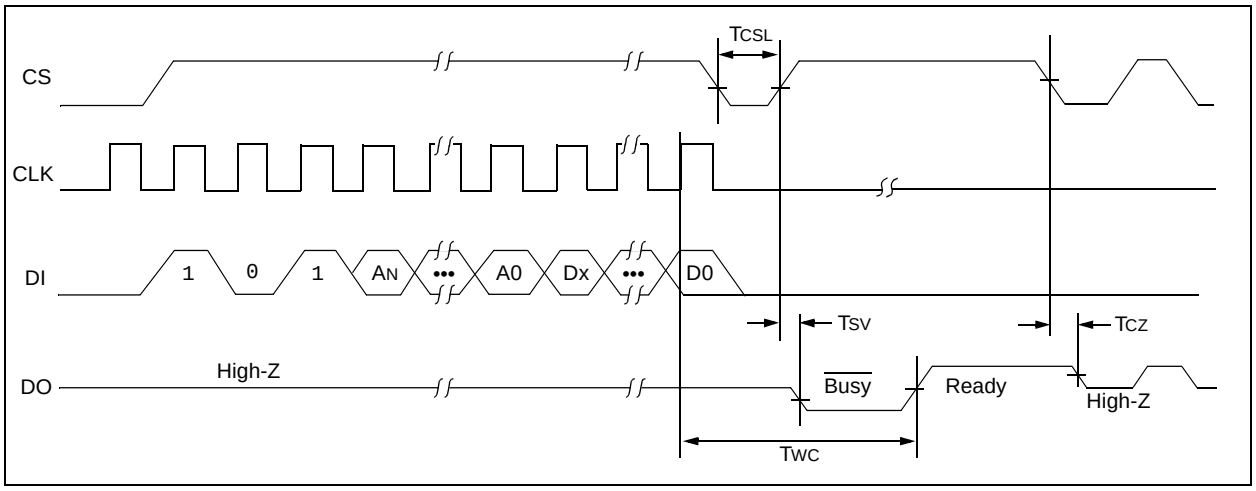
The WRITE instruction is followed by 8 bits (if ORG is low or A-version devices) or 16 bits (if ORG pin is high or B-version devices) of data which are written into the specified address. The self-timed auto-erase and programming cycle is initiated by the rising edge of CLK on the last data bit.

The DO pin indicates the Ready/$\overline{\text{Busy}}$ status of the device, if CS is brought high after a minimum of 250 ns low (TCSL). DO at logical '0' indicates that programming is still in progress. DO at logical '1' indicates that the register at the specified address has been written with the data specified and the device is ready for another instruction.

Note:	The write sequence requires a logic high signal on the PE pin prior to the rising edge of the last data bit.

Note:	After the Write cycle is complete, issuing a Start bit and then taking CS low will clear the Ready/$\overline{\text{Busy}}$ status from DO.

FIGURE 2-6: WRITE TIMING



2.9 Write All (WRAL)

The Write All (WRAL) instruction will write the entire memory array with the data specified in the command. The self-timed auto-erase and programming cycle is initiated by the rising edge of CLK on the last data bit. Clocking of the CLK pin is not necessary after the device has entered the WRAL cycle. The WRAL command includes an automatic ERAL cycle for the device, so the WRAL instruction does not require an ERAL instruction. However, the chip must be in the EWEN status.

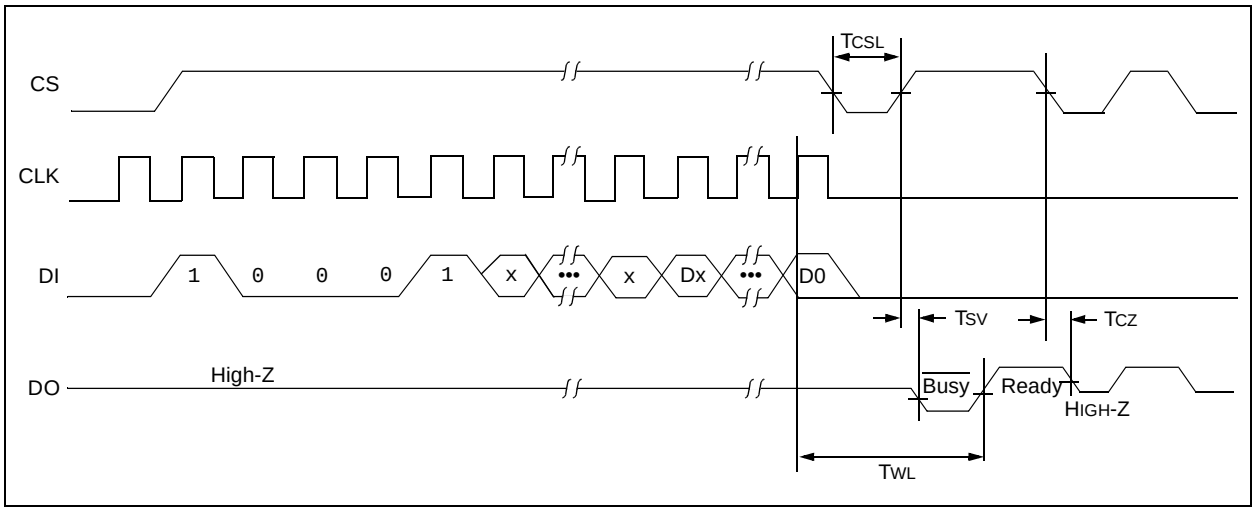
The DO pin indicates the Ready/$\overline{\text{Busy}}$ status of the device if CS is brought high after a minimum of 250 ns low (T_{CSL}).

Note:	The write sequence requires a logic high signal on the PE pin prior to the rising edge of the last data bit.

Note:	After the Write All cycle is complete, issuing a Start bit and then taking CS low will clear the Ready/$\overline{\text{Busy}}$ status from DO.

V_{CC} must be ≥4.5V for proper operation of WRAL.

FIGURE 2-7: WRAL TIMING



3.0 PIN DESCRIPTIONS

TABLE 3-1: PIN DESCRIPTIONS

Name	PDIP	SOIC	TSSOP	MSOP	DFN(1)	TDFN(1)	SOT-23	Function
CS	1	1	1	1	1	1	5	Chip Select
CLK	2	2	2	2	2	2	4	Serial Clock
DI	3	3	3	3	3	3	3	Data In
DO	4	4	4	4	4	4	1	Data Out
VSS	5	5	5	5	5	5	2	Ground
ORG	6	6	6	6	6	6	—	Organization/93XX76C only
PE	7	7	7	7	7	7	—	Program Enable/ 93XX76C only
VCC	8	8	8	8	8	8	6	Power Supply

Note 1: The exposed pad on the DFN/TDFN package may be connected to VSS or left floating.

3.1 Chip Select (CS)

A high level selects the device; a low level deselects the device and forces it into Standby mode. However, a programming cycle that is already in progress will be completed, regardless of the Chip Select (CS) input signal. If CS is brought low during a program cycle, the device will go into Standby mode as soon as the programming cycle is completed.

CS must be low for 250 ns minimum (TCSL) between consecutive instructions. If CS is low, the internal control logic is held in a Reset status.

3.2 Serial Clock (CLK)

The Serial Clock is used to synchronize the communication between a master device and the 93XX series device. Opcodes, address and data bits are clocked in on the positive edge of CLK. Data bits are also clocked out on the positive edge of CLK.

CLK can be stopped anywhere in the transmission sequence (at high or low-level) and can be continued anytime with respect to Clock High Time (TCKH) and Clock Low Time (TCKL). This gives the controlling master freedom in preparing opcode, address and data.

CLK is a “don’t care” if CS is low (device deselected). If CS is high, but the Start condition has not been detected (DI = 0), any number of clock cycles can be received by the device without changing its status (i.e., waiting for a Start condition).

CLK cycles are not required during the self-timed write (i.e., auto erase/write) cycle.

After detection of a Start condition the specified number of clock cycles (respectively, low-to-high transitions of CLK) must be provided. These clock cycles are required to clock in all required opcode, address and data bits before an instruction is executed. CLK and DI then become “don’t care” inputs waiting for a new Start condition to be detected.

3.3 Data In (DI)

Data In (DI) is used to clock in a Start bit, opcode, address and data synchronously with the CLK input.

3.4 Data Out (DO)

Data Out (DO) is used in the Read mode to output data synchronously with the CLK input (TPD after the positive edge of CLK).

This pin also provides Ready/$\overline{\text{Busy}}$ status information during erase and write cycles. Ready/$\overline{\text{Busy}}$ status information is available on the DO pin if CS is brought high after being low for minimum Chip Select Low Time (TCSL) and an erase or write operation has been initiated.

The Status signal is not available on DO, if CS is held low during the entire erase or write cycle. In this case, DO is in the High-Z mode. If status is checked after the erase/write cycle, the data line will be high to indicate the device is ready.

Note:	After a programming cycle is complete, issuing a Start bit and then taking CS low will clear the Ready/$\overline{\text{Busy}}$ status from DO.

3.5 Organization (ORG)

When the ORG pin is connected to VCC or logic high, the (x16) memory organization is selected. When the ORG pin is tied to VSS or logic low, the (x8) memory organization is selected. For proper operation, ORG must be tied to a valid logic level.

93XX76A devices are always (x8) organization and 93XX76B devices are always (x16) organization.

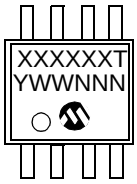
3.6 Program Enable (PE)

This pin allows the user to enable or disable the ability to write data to the memory array. If the PE pin is tied to VCC, the device can be programmed. If the PE pin is tied to VSS, programming will be inhibited. This pin cannot be floated – it must be tied to VCC or VSS. PE is not available on 93XX76A or 93XX76B. On those devices, programming is always enabled.

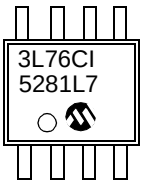
4.0 PACKAGING INFORMATION

4.1 Package Marking Information

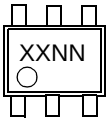
8-Lead MSOP (150 mil)



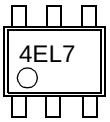
Example:



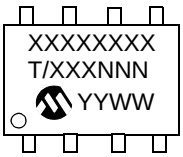
6-Lead SOT-23



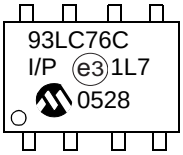
Example:



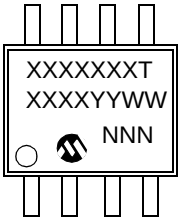
8-Lead PDIP



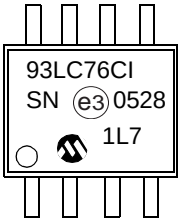
Example:



8-Lead SOIC

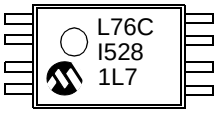


Example:

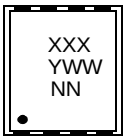


8-Lead TSSOP

Example:



8-Lead 2x3 DFN



Example:

APPENDIX A: REVISION HISTORY

Revision A (05/2003)

Initial Release.

Revision B (07/2003)

Revision C (12/2003)

Corrections to Section 1.0, Electrical Characteristics. Section 4.1, 6-Lead SOT-23 package to OT.

Revision D (02/2004)

Corrections to Device Selection Table, Table 1-1, Table 1-2, Section 2.4, Section 2.5, Section 2.8 and Section 2.9. Added note to Figure 2-7.

Revision E (03/2005)

Added DFN package.

Revision F (04/2005)

Added notes throughout.

Revision G (09/2006)

Revised note in Sections 2.8 and 2.9. Replaced DFN package drawing.

Revision H (11/2006)

Updated Package Drawings.

Revision J (10/2007)

Revised Device Selection Table; Revised Pin Function Table; Revised Package Types; Revised Table 3-1; Replaced Package Drawings; Revised Product ID System.

Revision K (5/2008)

Revised Figures 2-1, 2-2, 2-6 and 2-7; Revised Package Marking Information; Replaced Package Drawings.

Revision L (01/2012)

Added TDFN package.

Revision M (04/2012)

Revised Device Selection Table; Added Note to Package Types Diagram; Revised Marking Codes Table; Revised Product ID System.

THE MICROCHIP WEB SITE

Microchip provides online support via our WWW site at www.microchip.com. This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQ), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

CUSTOMER CHANGE NOTIFICATION SERVICE

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at www.microchip.com. Under "Support", click on "Customer Change Notification" and follow the registration instructions.

CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support
- Development Systems Information Line

Customers should contact their distributor, representative or field application engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at: http://microchip.com/support

READER RESPONSE

It is our intention to provide you with the best documentation possible to ensure successful use of your Microchip product. If you wish to provide your comments on organization, clarity, subject matter, and ways in which our documentation can better serve you, please FAX your comments to the Technical Publications Manager at (480) 792-4150.

Please list the following information, and use this outline to provide us with your comments about this document.

TO: Technical Publications Manager Total Pages Sent _____

RE: Reader Response

From: Name _____

Company _____

Address _____

City / State / ZIP / Country _____

Telephone: (_____) _____ - _____ FAX: (_____) _____ - _____

Application (optional):

Would you like a reply? ___ Y ___ N

Device: 93AA76A/B/C, 93LC76A/B/C, 93C76A/B/C Literature Number: DS21796M

Questions:

1. What are the best features of this document?

2. How does this document meet your hardware and software development needs?

3. Do you find the organization of this document easy to follow? If not, why?

4. What additions to the document do you think would enhance the structure and subject?

5. What deletions from the document could be made without affecting the overall usefulness?

6. Is there any incorrect or misleading information (what and where)?

7. How would you improve this document?

PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office..

PART NO.	X	X	/XX
Device	Tape & Reel	Temperature Range	Package

Device:	93AA76A:	8K 1.8V Microwire Serial EEPROM (x8)	
	93AA76B:	8K 1.8V Microwire Serial EEPROM (x16)	
	93AA76C:	8K 1.8V Microwire Serial EEPROM w/ORG	
	93LC76A:	8K 2.5V Microwire Serial EEPROM (x8)	
	93LC76B:	8K 2.5V Microwire Serial EEPROM (x16)	
	93LC76C:	8K 2.5V Microwire Serial EEPROM w/ORG	
	93C76A:	8K 5.0V Microwire Serial EEPROM (x8)	
	93C76B:	8K 5.0V Microwire Serial EEPROM (x16)	
	93C76C:	8K 5.0V Microwire Serial EEPROM w/ORG	
Tape & Reel:	Blank	=	Standard pinout
	T	=	Tape & Reel
Temperature Range:	I	=	-40°C to +85°C
	E	=	-40°C to +125°C
Package:	MS	=	Plastic MSOP (Micro Small outline), 8-lead
	OT	=	Plastic SOT-23, 6-lead (Tape & Reel only)
	P	=	Plastic DIP (300 mil body), 8-lead
	SN	=	Plastic SOIC (3.90 mm body), 8-lead
	ST	=	Plastic TSSOP (4.4 mm body), 8-lead
	MC	=	Plastic DFN (2x3x0.90 mm body), 8-lead
	MNY(1)	=	Plastic TDFN (2x3x0.75 mm body), 8-lead (Tape & Reel only)

Note 1: "Y" indicates a Nickel Palladium Gold (NiPdAu) finish.

Examples:

a) 93AA76C-I/P: 8K, 1024x8 or 512x16 Serial EEPROM, PDIP package, 1.8V

b) 93AA76AT-I/OT: 8K, 1024x8 Serial EEPROM, SOT-23 package, tape and reel, 1.8V

c) 93AA76CT-I/MS: 8K, 1024x8 or 512x16 Serial EEPROM, MSOP package, tape and reel, 1.8V

a) 93LC76C-I/ST: 8K, 1024x8 or 512x16 Serial EEPROM, TSSOP package, 2.5V

b) 93LC76BT-I/OT: 8K, 512x16 Serial EEPROM, SOT-23 package, tape and reel, 2.5V

c) 93LC76CT-E/MNY: 8K, 1024x8 or 512x16 Serial EEPROM, Automotive Temp, TDFN package, tape and reel

a) 93C76C-I/MS: 8K, 1024x8 or 512x16 Serial EEPROM, MSOP package, 5.0V

b) 93C76AT-I/OT: 8K, 1024x8 Serial EEPROM, SOT-23 package, tape and reel, 5.0V

NOTES:

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

QUALITY MANAGEMENT SYSTEM
CERTIFIED BY DNV
ISO/TS 16949

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits,General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
