Electronic switchgear and motor control

Switching devices for starting, reversing, and protecting electric motors are some of the most frequently used components in automation technology. These are often designed redundantly for safety-sensitive applications. When it comes to reducing installation time and space requirements, CONTACTRON hybrid motor starters are the state-of-the-art alternative.

This is because CONTACTRON hybrid motor starters combine up to 4 functions in a single device. Integration in popular fieldbus systems is implemented using the SmartWire-DT™ wiring system.

For protection of the entire system, the product range now includes the electronic motor manager (EMM). In addition to typical measured values such as voltage and current, the behavior of the system is monitored and protected by means of real power measurement. The process data in all popular fieldbus systems can be supplied via gateways and evaluated by a controller.

Electronic motor management (EMM)

The electronic motor management modules offer all the advantages of modern real power monitoring.

ELR-MM modules combine fast, wear-free electronic reversing load relays with modern measurement and evaluation electronics. EMM offers the same functionality for all performance classes, only without a power section.

Power within limits

Monitoring is based on freely parameterizable switching and signaling thresholds for overload and underload detection. Identical or separate settings can be made for the thresholds relating to the two directions of rotation. Parameterization relies on the real power consumed (calculated from three currents, voltages, and the phase angle), thereby offering a much more precise basis than if only the current is taken into consideration, as it is independent of voltage fluctuations and drive load. If a switching threshold is exceeded or not reached, the ELR-MM or EMM initiates an emergency shutdown of the motor immediately (or after an adjustable “delay time”). In addition, a message can be sent via an output.

This state can only be deactivated via a defined reset. If the effective power consumed is determined as being above or below the message thresholds, all that occurs is that a check-back is returned for the duration for which the module was addressed.

In addition, signals are generated by the module for the recognition of the direction of rotation. Asymmetry and phase failures are detected and signaled.

Permanent status monitoring with high scanning rates and the fast semiconductor switch enable complete system protection, including motor protection.

Without any extra wiring - and with just a single device - pumps, actuating drives, fans, and tools are monitored for proper functioning, contamination (filter or similar), and wear. The adjustable “inrush suppression” time can be used to mask out the switching operation from the monitoring process.

Protection against dry running, blocking, and cavitation, warning thresholds to indicate filter contamination.

Protection against blocking, warning thresholds for bearing wear and other cases that trigger overload.

Protection against blocking and broken tools, warning thresholds for tool and bearing wear.

In the case of motor-driven pumps, the lower performance threshold provides reliable protection against hazardous dry running.

Forced shutdown of the drive can be delayed by the “delay time”. This prevents forced shutdown in the event of air bubbles.

Tooling machines are monitored and protected in a similar way when drilling, milling or grinding. If the feed value on a milling machine is set too high, a tool may break in the “worst-case” scenario. The power threshold - parameterized accordingly - can be used to resolve this issue.

Additionally, a message threshold signals tool wear in advance.

Motor management

Electronic motor management

The EMM motor management module (with/without current transformer) for all performance classes monitors and protects 3-phase loads, such as electrical drives.

- Freely parameterizable signaling or switching thresholds
- Digital outputs control external switching elements
- Optional connection to INTERFACE system and PROFIBUS-GATEWAY-IFS via TBUS

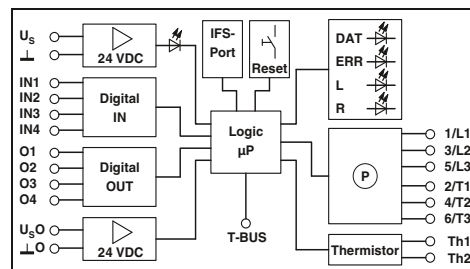

Allows the use of external current transformers

With integrated current transformers

Electronic motor management

The electronic motor management modules offer all the advantages of modern effective power monitoring. Every 6.6 ms, the effective power of a drive system or of any other 3-phase consumer is calculated from three currents, voltages and the phase angle. Currents of up to 16 A can be directly acquired and currents >16 A are supplied via external converters. Digital outputs can be used to control separate mechanical or electronic switching elements that adopt the actual switching of the load. In this configuration, the EMM reliably protects connected loads – irrespective of their power consumption – against overload and underload, and provides permanent status monitoring.

Up to 8 freely parameterizable switching, message thresholds and up to four freely configurable inputs and outputs enable the protection of electrical drives and the system.

The EMM modules can record the following data:

- Apparent effective and reactive power
- Currents and voltages
- Phase angle
- Switching-cycle and operating-hours
- Power meter.

Additional Functions:

- Adjustable bimetal function class 5-30
- Thermistor monitor
- Recording measured values
- PROFIBUS connection via TBUS
- Pre-configured motor exits such as reversing starters, star delta starters, etc.

The EMM modules can be used to record complete "curves that can be used for system documentation.

The operating modes forward and reversing running, reverse and limit switch operation (with integrated restart inhibit) switch actuating and regulating drives, pumps etc. and also check for wear.

Current transformer

The external converters should be selected with a secondary nominal current of 5 A. The primary current is determined by the current consumption of the consumer (refer to connection diagram). For suitable current transformers, see catalog INTERFACE.

DIN rail connector TBUS

The **TBUS** (Order No. 2707437) can be used to supply several EMMs with 24 V DC or to couple up to 31 EMMs (for example) to the PROFIBUS-GATEWAY-IFS.

Switching element

Depending on the particular requirement of the application, either an electro-mechanical contactor or reversing contactor combination, or a semiconductor contactor or a solid-state reversing contactor is to be used for the actual task of switching the load. These switching elements are controlled via the digital outputs of the EMM modules.

Motor management

IFS gateways for electronic motor management modules

EM...GATEWAY-IFS for connecting EMM...IFS modules to popular bus systems: PROFIBUS DP, Modbus, Modbus TCP, DeviceNet™, and CANopen®.

- Communication via T-BUS with up to 31 EMM...IFS modules
- Equipped with freely parameterizable digital inputs and outputs
- Digital switching outputs for direct control of EMM...IFS (forward/reverse running)

Hybrid motor starters for controlling 3-phase asynchronous motors combine up to four functions in one device as required. These include forward running, reverse running with optional reversing function including load wiring. The locking circuit for the reversing function is also integrated and certified as a single electronic reversing starter according to UL 508a and the new UL 60947-1. Furthermore, the devices protect the motor by means of an integrated motor protection relay with automatic and remote reset function. The implemented safety function according to Performance Level e (PL e) of EN ISO 13849-1 provides the emergency stop requirement. A PDT confirmation contact provides information regarding the availability of the device, and the motor state. This means that in the event of motor control without an error message the integrated current measurement and symmetry scanning ensures that the motor is turning. Even with these numerous functions, the hybrid motor starter is just 22.5 mm wide.

Short-circuit-proof hybrid motor starters with integrated protective devices, for mounting on 35 mm DIN rails and 60 mm busbar systems and connection to popular bus systems via SmartWire-DT™ complete the product portfolio.

Hybrid motor starters with up to four functions in one device: forward running, reverse running, motor protection, and emergency stop.

Short-circuit-proof hybrid motor starters with integrated fuses for mounting on 35 mm DIN rails and 60 mm busbar systems.

Connection of hybrid motor starters in a bus system via SmartWire-DT™. Gateways are provided for the main bus systems: PROFIBUS, Modbus TCB, EtherNet/IP™, and CANopen®.

The uniform design of the control side enables the combination of short-circuit-proof hybrid motor starters with SmartWire-DT™ adapters for integration in a bus system.

Hybrid motor starters

"4 in 1" hybrid motor starter with reversing function, motor protection, and emergency stop

These 3-phase "4 in 1" hybrid motor starters combine four functions in one device: right contactor, left contactor, motor protection relay, and emergency stop up to category 3.

Offer the following advantages:

- 22.5 mm wide
- They save wiring
- Bi-metal function can be set up to 9 A
- Long service life
- Space-saving
- 3-phase loop bridging

Safety level according to:

- IEC 61508-1: SIL3
- ISO 13849: PL e

For reversing 3~ AC motors up to 550 V AC/3 x 0.6 A

For reversing 3~ AC motors up to 550 V AC/3 x 2 A

Hybrid motor starters

"3 in 1" hybrid motor starter with motor protection and emergency stop

These 3-phase "3 in 1" hybrid motor starters combine three functions in one device: right contactor, motor protection relay, and emergency stop up to category 3.

Offer the following advantages:

- 22.5 mm wide
- They save wiring
- Bi-metal function can be set up to 9 A
- Long service life
- Space-saving
- 3-phase loop bridging
- Safety level according to:
 - IEC 61508-1: SIL3
 - ISO 13849: PL e

For starting 3~ AC motors up to 550 V AC/3 x 0.6 A

For starting 3~ AC motors up to 550 V AC/3 x 2 A

Notes:	
Type of housing:	Polyamide PA non-reinforced, color: green.
Marking systems and mounting material	See Catalog 5

Technical data	
Rated control supply voltage U_s	24 V DC 0.8 ... 1.25

"1 in 1" hybrid motor starter

3-phase hybrid motor starter for starting three-phase induction motors

The devices offer the following advantages:

- 22.5 mm wide
- Low-wear switching
- Up to 9 A
- Long service life
- Space-saving
- 3-phase loop bridging

Notes:

Type of housing:
Polyamide PA non-reinforced, color: green.

Marking systems and mounting material
See Catalog 5

For starting 3~ AC motors
up to 550 V AC/3 x 9 A

Technical data

Input data	24 V DC	230 V AC (50/60 Hz)
Rated control supply voltage U_S	24 V DC	230 V AC (50/60 Hz)
Rated control supply voltage range with reference to U_S	0.8 ... 1.25	0.4 ... 1.1
Rated control supply current I_S at U_S	40 mA	4 mA
Rated actuation voltage U_C ON	24 V DC	230 V AC
Rated actuating voltage range with reference to U_C	0.8 ... 1.25	0.4 ... 1.1
Rated actuating current I_C at U_C	5 mA	7 mA
Input circuit	Protection against polarity reversal, Surge protection	Surge protection
Operating voltage / status / error indicator	Green LED / Yellow LED / Red LED	
Output data load side	42 V AC ... 550 V AC	42 V AC ... 550 V AC
Output voltage range	max. 9 A	max. 9 A
Load current	(see derating curve)	(see derating curve)
Surge current	100 A (t = 10 ms)	100 A (t = 10 ms)
Minimum load current	0 A	0 A
Residual voltage	< 0.5 V	< 0.5 V
Output protection	Surge protection	
General data	500 V	6 kV/safe isolation
Rated insulation voltage	6 kV/safe isolation	6 kV/safe isolation
Rated surge voltage	-25°C ... 70°C	
Ambient temperature (operation)	3 x 10 ⁷ cycles	
Electrical service life	DIN EN 50178 / EN 60947	
Standards/regulations	Can be aligned with spacing = 20 mm	
Mounting	0.14 - 2.5 mm ² / 0.14 - 2.5 mm ² / 26 - 14	
Screw connection solid / stranded / AWG	22.5 mm / 99 mm / 114.5 mm	
Dimensions	W / H / D

CONTACTRON hybrid motor starters with short-circuit protection

These short-circuit-proof 3-phase “4 in 1” hybrid motor starters for mounting on 30 mm DIN rails or 60 mm busbars combine four functions in one device: right contactor, left contactor, motor protection relay, and emergency stop up to category 3.

Offer the following advantages:

- 22.5 mm wide
- Bi-metal function can be set up to 9 A
- Long service life
- Space-saving
- They save wiring
- 3-phase loop bridging
- Coordination type 2 according to IEC/EN 60947-4-2

Hybrid motor starters

CONTACTRON hybrid motor starters with SmartWire-DT™ support

Switch and reverse motors safely and reliably with CONTACTRON compact hybrid motor starters. The CONTACTRON “4 in 1” combines all the functions of a conventional reversing contactor circuit in a single device – for motors up to 4 kW, with a design width of just 22.5 mm.

The SmartWire-DT™ communication system makes the complex cabling of the control and signal levels easier and clearer. You can also combine the hybrid motor starters with standard fieldbus systems.

The hybrid motor starters, as well as the command and signaling devices, are directly connected to the controller with SmartWire-DT™ via a gateway. Safe shutdown is implemented with a PSR safety relay. Thanks to SmartWire-DT™, the amount of wiring is significantly reduced. You benefit from clearly arranged and compact control cabinets.

Notes:

Switching device technical data

You can download the **SmartWire-DT™ Assist** software for easy creation of SmartWire-DT™ networks free of charge at www.phoenixcontact.com

CONTACTRON bridge

The flexible CONTACTRON loop bridge (BRIDGE-...) simplifies the supply and looping through of phases L1, L2, and L3. It is available in 2- to 10-way versions for modules in the CONTACTRON family with 22.5 mm housing width.

Features of the 3-phase loop bridge:

- Saves considerable wiring
- Suitable for CONTACTRON series
 - ELR H3...
 - ELR H5...
 - ELR (W)3...
 - EMM...IFS
- Bridging of 2 to 10 devices with maximum module spacing of 22.5 mm
- Up to 575 V AC/3 x 25 A
- Additional bridge versions available on request

Solid-state contactors

Three-phase solid-state reversing contactors

The three-phase solid-state reversing contactor with an integrated locking circuit and load wiring are intended for applications such as control valves, slides, separating filters, ship steering gears, etc. The scope of performance ranges from 575 V AC/3 x 2 A to 575 V AC/3 x 37 A.

Advantages of three-phase solid-state reversing contactors:

- Noise-free and wear-free switching
- Integrated protective circuit
- Stable and short switching times
- Long service life
- High switching frequency
- Integrated locking and load wiring
- Thermal fuse optional

Notes:

Marking systems and mounting material See Catalog 5

For reversing 3~ AC motors up to 575 V AC/3 x 2 A

Technical data

Input data	
Rated actuating voltage U_c R/L	24 V DC
Rated actuating voltage range with reference to U_c	0.8 ... 1.25
Rated actuating current I_c at U_c	12.7 mA
Input circuit	11.2 mA
Operating voltage / status / error indicator	Protection against polarity reversal, Surge protection
Output data load side	- / Yellow LED / Red LED
Output voltage range	48 V AC ... 575 V AC
Periodic peak reverse voltage	1200 V
Load current	max. 2 A (see derating curve)
Surge current	200 A (t = 10 ms)
Minimum load current	100 mA
Residual voltage	< 1.5 V
Leakage current	6 mA
Maximum load value $I^2 \times t$ (t = 10 ms)	250 A ² s
Output protection	RCV circuit
General data	
Rated insulation voltage	500 V
Rated surge voltage	6 kV/basic isolation
Reversing frequency	max. 10 Hz
Switching frequency	max. 5 Hz
Ambient temperature (operation)	-25°C ... 70°C
Standards/regulations	DIN EN 50178 / EN 60947
Power station requirements	DWR 1300 / ZXX01/DD/7080.8d
Degree of protection according to IEC 60529/ EN 60529	IP20
Mounting position	Vertical (horizontal DIN rail)
Mounting	Can be aligned with spacing = 20 mm
Screw connection solid / stranded / AWG	0.14 - 2.5 mm ² / 0.14 - 2.5 mm ² / 26 - 12
- Control side	0.14 - 2.5 mm ² / 0.14 - 2.5 mm ² / 26 - 12
- Load side	40 mm / 99 mm / 114.5 mm
Dimensions	W / H / D

Solid-state contactors

Three-phase semiconductor contactor

Motors of mixers, machine tools, conveying systems, pumps, and fans up to 575 V AC/3 x 37 A (equivalent to 1 kW to 18.5 kW) can be controlled using the CONTACTRON three-phase semiconductor contactors.

Advantages of three-phase semiconductor contactors:

- Noise-free and wear-free switching
- Integrated protective circuit
- Stable and short switching times
- Long service life
- High switching frequency
- Thermal fuse optional

The figure shows the control of the reversing load relay with a soft starter and the operation of a three-phase current load.

Solid-state contactors

Electronic reversing load relay for DC motors

The ELR-DC electronic reversing load relay allows mechanically commutated DC motors to be switched. They reverse and reduce the speed of DC motors up to 24 V/6 A in a wear-free manner. A short-circuit, surge-voltage, and overload-proof output guarantees reliable use in the plant.

If a 24 V DC signal is applied to the “left” input, the ELR-DC is interconnected so that the output supplies the motor with voltage. If the “right” input is triggered, the polarity of the voltage is inverted on the output. By triggering both inputs, i.e., “right” and “left”, the motor is short-circuited internally via the ELR-DC and reduces the speed.

Thanks to the internal interlocking circuit and load wiring, wiring expense is reduced to a minimum.

Solid-state contactors

Single-phase solid-state contactors

Single-phase solid-state contactors are used in AC voltage networks wherever silent switching, high switching frequencies, and a practically unlimited service life are required.

The sturdy power semi-conductors switch in zero voltage crossing and thus produce no additional high-frequency interferences. The modules are insensitive to shock loads and vibrations – even use in aggressive, polluted environments is unproblematic.

They offer the following advantages:

- High switching frequency
 - Wear-free and output-free
 - Input voltage versions 24 V DC and 230 V AC
- Common areas of application are:
- Production machines
 - Temperature controllers
 - Conveyor equipment
 - Light and lighting systems.

Notes:	
Type of housing:	Polycarbonate PC, color: green.
Marking systems and mounting material	See Catalog 5

For switching 1~ AC motors up to 660 V AC/20 A

Technical data

IP67 motor starters

PROFINET motor starter

Motor starters in robust stainless steel housing (IP67) can be used directly in the system as a compact function unit. This eliminates the complex wiring of individual functions in the control cabinet.

The motor starter can be used to control three-phase asynchronous motors in two directions of rotation, completely via PROFINET. Distributed sensors and actuators can be directly connected to PROFINET without the need for further intermediate stations or additional cabling.

A complete PROFINET motor starter consists of three products. For example:

- ELR 5011 IP PN
- IBS IP 400 MBH-F
- IBS PG SET

Additional features:

- Performance classes: 0.06 kW to 3.0 kW
- Simple assembly
- Plug-in connection system
- Exchangeable module electronics
- Status and diagnostic indicators on the module
- 10 digital inputs for connecting sensors
- 4 digital outputs for connecting actuators
- One- and two-motor reversing starters

Notes:

1) EMC: Class A product, see page 571

Inline frequency inverters for the control cabinet are the compact solution for extending your Easy Automation solution to include electronic speed regulation for asynchronous motors. The devices seamlessly integrate into the Inline system and have IP20 protection. Depending on the drive task, you can select frequency inverters from various performance classes, up to a maximum of 4 kW. In order to connect to the Inline system via the Fieldline local bus, you just need the IB IL 24 FLM-PAC Inline module. The Inline frequency inverter can be connected to a Phoenix Contact controller via the Inline module.

Additional features:

- Maximum motor power
0.75 kW, 1.5 kW, 2.2 kW, and 4.0 kW
- 3 x 400 V mains input (±15%) 50/60 Hz
- DTM for parameterization and diagnostics
- 8 freely programmable parameter records
- PTC evaluation for
2.2 kW and 4.0 kW versions
- Integrated line filter
- U/f linear and U/f square operating modes
- S-ramp function
- Motor protection function (I²t)
- Connection of a braking resistor
- DC braking
- Evaluation of the temperature switch in the motor
- Voltage boost
- 1 x analog input, 1 x analog output,
1 x relay output

Measurement and control technology

The modular analog converters for measurement and control technology prevent analog signals from being distorted by disturbance variables. With accurate conversion, isolation, filtering or amplification of analog signals, they secure and increase transmission quality and therefore the quality of closed-loop control circuits.

We offer the following product ranges:

Highly compact isolating amplifiers – MINI Analog

- For significant space savings and efficiency
- Design width of just 6.2 mm
- System cabling and multiplexer solutions
- 3-way electrical isolation

Isolating amplifiers with SIL functional safety – MACX Analog

- For maximum signal safety
- Consistent SIL certification
- Safe 3-way electrical isolation

Isolating amplifiers, special types, and digital displays – MCR Analog

- For special applications in signal processing
- Electrical isolation
- Record and convert temperatures directly in the field

Ex i isolating amplifiers with SIL functional safety – MACX Analog Ex

- For intrinsically safe circuits in the Ex area
- Maximum explosion protection for all Ex zones and gas groups
- Design width of just 12.5 mm for all single- and two-channel devices
- Safe 3-way electrical isolation

Input

Maximum input signal

The maximum input signal describes the value achieved before any damage occurs to the module and the signal generator. If these values are exceeded, suppresser diodes can be triggered to short circuit this input when a surge voltage is detected. The transmission range of the analog signals is located exclusively within the specified input ranges.

Input resistance

The input resistance of an isolating amplifier or measuring transducer is determined in such a way as to ensure that the input signal is loaded only slightly. This results in a low-resistance input for current inputs and a high-resistance input for voltage inputs.

Voltage drop

In the case of passive isolators, the input voltage drop occurs as a result of the voltage drop of the operational load and the auxiliary power requirements of the module. The greater the auxiliary power requirements of the passive isolator, the smaller the operational output load is allowed to be. Low auxiliary power requirements are regarded as an indicator of device quality.

Common mode rejection

In the case of isolating amplifiers, operational amplifiers are used internally for transmission purposes. In theory, operational amplifiers should display ideal transmission and amplification behavior. However, it is a different matter in practice. When both input voltages are changed in the same direction, i.e., exactly the same voltage to ground is applied to both input terminal blocks, this leads to an unintended output signal. Theoretically, if the operational amplifier is ideal, no output signal should appear since the differential input signal is "0 V". Common mode rejection indicates the factor (in dB) by which the common input voltage at both inputs is amplified to a lesser extent than the difference in voltage between the two inputs.

Analog output

Maximum output signal

If the devices operate without fault conditions, an overload at the input cannot cause greater values than this maximum to occur at the output.

Zero/span adjustment

When the zero point is set, the zero point of an analog output is adjusted and set in relation to the input signal.

When the "amplification" span is set, the analog output is adjusted in relation to the input signal. In this case, the output characteristic is increased or decreased by an amplification factor.

Load

The load on the output side indicates the load-carrying capacity of a measuring transducer or an isolating amplifier. Current outputs can usually drive a maximum of 500 Ω , voltage outputs can be loaded with a minimum of up to 10 k Ω .

Residual ripple/ripple

A superimposed ripple can appear on the output signal due to signal conditioning required by the circuit. The residual ripple is indicated in mV_{pp} or mV_{rms}.

Open circuit response

With some measuring transducers, the input signal is permanently monitored for possible open circuits in the signal cable. If the signal exceeds or falls below a tolerance limit, an open circuit is detected and a defined output signal is sent. With programmable devices, the output signals can be freely selected.

Digital output

Relays

Many of the products with a relay output that are shown in the catalog feature hard gold-plated relay contact material. The voltage range has an important role to play in terms of how this contact material can be used. Up to 50 mA can be transmitted with voltage ranges of up to 30 V AC/36 V DC. Even very small currents are transmitted perfectly. If the aforementioned voltage range is exceeded and values of 250 V AC/DC are processed, currents of up to 2 A can flow. However, in this case the subsequent transmission of small currents can no longer be guaranteed.

Transistor

A PNP transistor switching output can be used to transmit 24 V DC switching signals up to approximately 100 mA.

General data

Supply voltage

The product range includes DC and AC power supply units for specific products. There is a standard power supply unit available in the form of a 24 V DC version that operates within a voltage range of 20 ... 30 V DC. For other supply voltages, please refer to the technical data.

Current consumption

The value specified here describes the auxiliary power requirements of the devices. It also includes the output current and, where applicable, the switching output load.

Transmission errors

The transmission precision is a gauge of the quality of a measuring transducer. It is the deviation from the ideal transmission characteristic curve and includes linearity, span, and offset errors.

Non-linearity

Non-linearity is the deviation from the ideal transmission precision without including span and offset errors.

The non-linearity of a signal makes it possible to evaluate the course from zero to end point. Normally, the linearity errors are expressed as a percentage that indicates the extent of deviation from the ideal transmission characteristic curve.

Temperature coefficient

The temperature coefficient provides an assessment of the extent to which precision deviates when the ambient temperature around an isolating amplifier or measuring transducer changes. In most cases this is specified as a percentage. An alternative definition is ppm/K (parts per million/Kelvin). Example:
250 ppm/K = 0.025%/K.

Limit frequency

Isolating amplifiers are basically designed to transmit DC signals. However, signal changes call for a dynamic form of behavior so that small AC quantities (normally: 30 Hz) can also be transmitted. This is achieved by defining a limit frequency. At the same time, a low limit frequency can be used to suppress higher-frequency AC components.

Step response

The step response indicates the response time of the output signal when an input signal step occurs (10 ... 90%). The step response is inversely proportional to the limit frequency. This means that the response time decreases as the limit frequency increases.

Test voltage

The test voltage indicates the dielectric strength of an isolated distance and is determined by type tests. In this test, a 50 Hz voltage is applied for one minute; it describes the value achieved before a disruptive discharge is able to move to another potential level in the device.

Safe isolation

“Safe isolation” is defined as protection against hazardous shock currents. When module specifications are provided in accordance with EN 61010, a distinction is made between faultless operation and operation under fault conditions. Nominal supply voltages of 30 V AC/60 V DC are deemed valid for faultless operation.

Ambient temperature range

The temperature limits specified here relate exclusively to operation. These limits do not apply to storage and transport. It is here where the temperature limits of the materials used are the decisive factor. If the devices are outside of the specified temperature range during assembly, they must be brought back within the specified temperature range prior to system startup. It is important to make sure that no condensation occurs during this process.

Protective circuit

In order to protect the measurement and control modules against surge voltages, suppressor diodes are connected upstream of the signal and supply paths. These diodes behave in a similar manner to conventional Zener diodes, except for the fact that suppressor diodes have faster response times and a higher maximum current.

Information on directives and standards

When carrying out further processing of non-independent items of equipment (components), the applicable regulations pertaining to installation must be observed.

The relevant device-specific regulations also apply with regard to installation in devices.

Active isolation

3-way isolation

In the case of modules with this isolation method, all components that are connected to the input, output or power supply are protected against interference from each other. All three directions (input, output, and power supply) are electrically isolated from one another accordingly.

The 3-way isolation provides electrical isolation between the measurement sensor and the controller as well as between the controller and the actuator.

On the input side, the modules need active signals. On the output side, they provide a filtered and amplified signal.

Input isolation

In the case of modules with this isolation method, the electronics connected on the output side (e.g., the controller) are to be protected from interference from the field. For this reason, only the input is electrically isolated from the output and the power supply that are at the same potential.

On the input side, the modules need active signals (e.g., from measurement sensors). On the output side, they provide a filtered and amplified signal (e.g., from the controller).

Repeater power supply

Repeater power supplies use the signal input side not only for measured value acquisition, but also to provide the necessary power to the passive measurement sensors connected on the input side.

On the output side, they provide a filtered and amplified signal (e.g., from the controller).

The isolation method used by these modules is input isolation.

Passive isolation

Passive isolation, supplied on the input side

The modules draw the power needed for signal transmission and electrical isolation from the active input circuit. On the output side, a conditioned current signal is provided to the controller or to actuators.

This passive isolation allows signal conditioning (interruption of ground loops) and filtering without an additional power supply.

Passive isolation, supplied on the output side (loop-powered)

The modules draw the power needed for signal transmission and electrical isolation from the active output circuit, ideally from a PLC input board that supplies power.

On the output side, the loop-powered modules operate with a 4 ... 20 mA standard signal. On the input side, the passive isolator processes active signals.

When this isolation method is used, it is important to make sure that the active signal source connected on the output side (e.g., an active PLC input board) is able to supply the passive isolator with power, as well as operate its load.

Applications

Resistance thermometers

Resistance thermometers (e.g., Pt 100, Ni 1000) change their resistance value depending on the temperature. The MCR temperature transducers detect this change and convert it into a proportional analog signal.

To avoid unwanted self-heating of the sensor, the constant measured current used is kept as low as possible (MCR-T-UI... → 250 μ A).

Two-conductor connection technology

The resistance thermometer is connected to the MCR measuring transducer using a two-core cable. Please note that the supply cable resistances are added to the measured resistance and consequently distort the result.

A distance of 10 m should not be exceeded.

Example: a 50 m long copper cable with a cross section of 0.5 mm² has a specific resistance of 3.4 Ω . A Pt 100 sensor has a resistance change of 0.384 Ω per 1 K temperature change. This corresponds to an error of 8.8°C.

Three-conductor connection technology

Three-conductor technology is normally used to minimize the effect of cable resistances. An additional cable is connected to the resistance thermometer, so that the latter can be measured using two measuring circuits, one of which acts as a reference. In this way, it is possible to compensate for the cable resistance.

Identical cable lengths and an identical ambient temperature are essential here.

Since this is more or less the case in the majority of applications, three-conductor technology is the most commonly encountered today. Line compensation is not necessary.

Four-conductor connection technology

Four-conductor connection technology is an ideal connection technology for resistance thermometers.

The measurement result is affected neither by cable resistances nor by their temperature-dependent fluctuations. The voltage drop on the supply and return lines can therefore be measured and compensated for separately. Line compensation is not necessary.

Thermocouples

In contrast to resistance thermometers, thermocouples are active sources that generate a voltage in the microvolt range. The temperature difference measured between the measurement junction and the cold junction is converted into an absolute temperature with the help of cold junction compensation.

Operating principle:

If different metals are joined together, a thermal voltage is produced in the metal atoms as a result of the different binding energies of the electrons. This voltage is dependent firstly on the metals themselves and secondly on the temperature.

If the same temperature prevails at the measuring junction (ϑ_1) and the cold junction (ϑ_2), no current will flow because the generated partial voltages cancel each other out. However, if the temperatures at the measuring junction and the cold junction are different, different voltages are produced. These voltages do not completely cancel each other out, and so current flows.

A thermocouple therefore always measures only one temperature difference. This is derived from the difference between the thermal voltages at the measuring junction and at the cold junction.

The voltage produced by the thermoelectric effect is very low; only a few microvolts per Kelvin.

Example: if a type J thermocouple (Fe-CuNi) is connected to a copper terminal block, thermal voltages with opposite polarity will be generated (at the iron-copper and copper-constantan transitions) and cancel each other out.

Therefore, only the difference in the thermal voltages between constantan (Cu-Ni) and iron is of relevance.

A role is also played by the temperature at the terminal point. If it is known, the temperature at the measuring junction can be derived by adding the thermal voltage measured at the same junction.

The MCR temperature transducers for thermocouples therefore detect the temperature at the terminal points and compensate this value, which is also referred to as the reference junction or the cold junction.

This process is sometimes called cold junction compensation.

Digital displays

Use of the freely programmable characteristic curve

The freely programmable characteristic curve, i.e., the assignment of the displayed value to the input value, is important in process applications for indicating flow rates or liquid levels.

The purpose of level measurements is very often not to determine how much liquid is still inside the tank, but rather to establish how much has been drawn out of it. In this case, the characteristic curve can simply be inverted in order to display the required value.

Parameterization of the characteristic curve using interpolation points

With non-linear input signals, the received analog values can be assigned to the value to be displayed by means of a programmable characteristic curve. This curve can consist of up to 24 interpolation points. This allows flow sensors with a non-linear characteristic curve to be adapted, for instance. The analog signal digital displays in the Function Line additionally feature a summing function which - to take a typical example from bottling technology - allows you to switch over at the touch of a button from the instantaneous value (= flow rate in

l/min) to the total flow integrated in the background, which can be displayed in any unit. This saves space and money, because there is no need for a second digital display.

Limit values can also be called at the touch of a button. Limit values 1 and 2 can be assigned to either the actual value or the cumulative value. If the latter value is exceeded, one of the two output relays is activated.

Other applications include indicating liquid levels, pressures, and temperatures. With servo motors, the analog output signals (0 ... 10 V) generated by the tachometer can be supplied to the input of the digital display in order to indicate the motor speed.

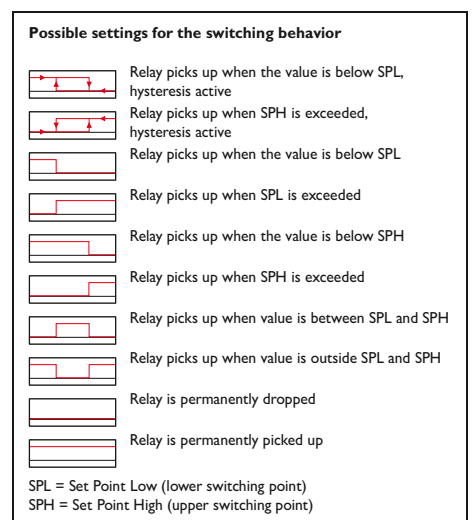

Switching behavior of relay or transistor outputs:

A different kind of switching behavior can be defined for each relay or each transistor when it reaches a preset switching point.

All the possible settings for the switching behavior are shown and explained in the list:

- The first two options include hysteresis, i.e., the behavior of the relay depends on the direction from which a switching point is reached.
- For the remaining options, with the exception of the last two ("on" and "off"), a switching tolerance is taken into account to prevent the relay contact from "chattering". The relay is not switched until the switching point plus switching tolerance has been reached.

- In the "on" state, the relay is permanently picked up. It only responds if there is an open circuit and it has been set to drop out when this happens.
- In the "off" state, the relay only responds if there is an open circuit and it has been set to pick up when this happens.

Non-intrinsically safe signal transmission in potentially explosive areas

Electrical equipment operated in systems with potentially explosive areas is subject to different usage requirements, depending on the application.

For example, electrical equipment could be used in the following locations when analog signals are being transmitted:

- Sensors and actuators can be located in zone 0, zone 1 or zone 2.
- Signal transmitters can be located in zone 1, zone 2 or the safe area.
- The controller, e.g., PLC, is in the safe area.

For examples of the kinds of electrical devices that can be installed for the purpose of transmitting signals, please see the figure.

Devices must be designed to offer a suitable protection type if they are to be used in zone 2. The MINI Analog and MACX Analog ranges are designed to provide protection type “n” for this purpose and must be installed in zone 2 in suitable and approved housing (EN 60079-15 and

EN 60079-0) with IP54 protection minimum.

Example:

A sensor/actuator with protection type “n” can be connected to an isolator from the MINI Analog or MACX Analog ranges in zone 2.

When selecting suitable devices for zone 2, it must be ensured that the electrical data of the sensors/actuators is not exceeded.

If the sensors/actuators are mounted in explosion-proof housing or if they have their own explosion-proof housing, they can also be installed in zone 1.

Installation requirements

The figure shows a range of options for installing electrical devices in areas with a danger of gas explosions. Special requirements regarding the configuration, selection, and installation of electrical systems in areas with a danger of gas explosions can be found in EN 60079-14.

In the 2008 edition, the relevant contents of EN 61241-14 were incorporated in EN 60079-14.

EN 61241-14 must still be observed when installing electrical equipment in areas containing combustible dust. Other important factors when it comes to running systems in potentially explosive areas are inspection, maintenance, and repairs. Stipulations regarding these matters can be found in EN 60079-17 and EN 60079-19.

Installation of electrical devices for signal transmission

Highly compact and efficient

MINI Analog isolating amplifiers isolate, convert, filter, and amplify your analog signals – with a design width of just 6.2 mm.

The isolating amplifiers from the MINI Analog range offer the full spectrum of analog signal conditioning. They are therefore extremely efficient with regard to saving costs, space, and energy.

The comprehensive approval package means that they can be used in a variety of areas.

Choose the right MINI Analog isolating amplifier for your application:

Analog IN/OUT

- Universal and standard 3-way isolating amplifiers
- 3-way repeater power supplies
- 4-way signal duplicators
- 2-way passive isolators
- Output loop-powered isolators

Temperature

- Universal measuring transducers for resistance thermometers and thermocouples
- Active measuring transducers for Pt 100 and thermocouples
- Output loop-powered Pt 100 measuring transducers

Frequency

- Frequency transducer up to 80 kHz
- Analog frequency transducers

Potentiometer/resistor

- Potentiometer measuring transducers with automatic potentiometer detection

Limit values

- Threshold value switches with PDT relay

Digital IN

- NAMUR isolating amplifiers with relay output

Accessories

- Supply components
- Fault monitoring module
- System cabling
- Marking material
- Surge protection

Fault monitoring

Fault monitoring is a modular solution for convenient error evaluation in multi-channel applications.

Depending on the module type, the following errors can be indicated by means of a group error message:

- Overrange
- Underrange
- Open circuit
- Short circuit
- Module error

It is also possible to detect and indicate the failure of a supply voltage at the power terminal block.

The modularity is characterized by the ability to freely adjust error evaluation, both on the device side and in the evaluation module.

Fault monitoring is compatible with and can be used for the following isolating amplifier ranges:

- MINI Analog
- MACX Analog

Space savings of up to 65%

– Compared to other isolating amplifiers on the market with design widths up to 17.5 mm.

Fault monitoring and power bridging

– The DIN rail connector simplifies supply and enables group error monitoring.

Clearly arranged wiring

– Eight connections, with a choice of screw or spring-cage terminal blocks.

Low power consumption

– The resulting minimal self-heating results in a long service life and a high degree of operational reliability.

High operational reliability

– 3-way electrical isolation increases the operational reliability against system disturbances.

Easy configuration

– Can be configured easily via DIP switches or software, for extended functionality and monitoring.

Reduction in analog inputs on controllers

– The MINI Analog multiplexer reduces up to eight analog signals to a single 4 ... 20 mA signal.

Time-saving system cabling

– Plug and play – for eight channels on the isolating amplifier and controller side.

Fast and error-free signal connection

– Compact termination carriers connect MINI Analog devices to the automation system – plug and play and hot-swappable.

Analog IN / Analog OUT
3-way isolating amplifier

Ex n

Configurable, up to 36 signal combinations

Housing width 6.2 mm

- Highly compact isolating amplifier for electrical isolation, conversion, amplification, and filtering of standard analog signals
- Up to 36 signal combinations can be configured using DIP switches
- 3-way isolation
- Low power consumption
- Power supply possible through the foot element (T-Connector)
- Standard configuration:
0 ... 10 V input, 0 ... 20 mA output

Application example: Level measurement

Analog IN / Analog OUT
3-way isolating amplifier

Configurable, for shunt measurements

Housing width 6.2 mm

- Highly compact isolating amplifier for electrical isolation, conversion, amplification, and filtering of mV signals to create standard analog signals
- Ideal for converting signals in the case of shunt measurements
- Up to 280 signal combinations can be configured using DIP switches
- 3-way isolation
- Low power consumption
- Power supply possible through the foot element (T-Connector)
- Standard configuration:
0 ... 50 mV input, 0 ... 20 mA output

Analog IN / Analog OUT
3-way isolating amplifier

Configurable,
for 0 ... 24 V / 0 ... 30 V input signals

Housing width 6.2 mm

- Highly compact isolating amplifier for electrical isolation, conversion, amplification, and filtering of 24 V or 30 V DC signals to create standard analog signals
- Up to 12 signal combinations can be configured using DIP switches
- 3-way isolation
- Low power consumption
- Power supply possible through the foot element (T-Connector)
- Standard configuration:
0 ... 30 V input, 0 ... 20 mA output

Notes:

Analog IN / Analog OUT
repeater power supplies

Optionally available with HART transmission

Housing width 6.2 mm

- Highly compact repeater power supplies for electrical isolation, amplification, and filtering of standard analog signals
- Supply of 2-conductor and passive 3-conductor sensors
- Can also be used as an isolator without supply
- 3-way isolation
- Alternatively bidirectional HART transmission
- Power supply possible through the foot element (T-Connector)

Analog IN / Analog OUT passive isolators

Ex n

Either 1- or 2-channel

CE, RoHS, REACH
Ex: Ex n, Ex i, Ex o, Ex s, Ex t, Ex z
Housing width 6.2 mm

- Highly compact 2-conductor passive isolators for electrical isolation and filtering of standard analog signals
- Input loop-supplied
- Does not require any additional auxiliary voltage
- 2 channels in conj. with a design width of just 6.2 mm
- Voltage drop on isolating amplifier of just 1.7 V

Notes:

When using passive isolators, make sure that the current sourcing voltage of the measuring transducer U_B is sufficient to drive the maximum current of 20 mA via the passive isolator with a voltage drop $U_V = 1.7 \text{ V}$ and load R_B .

This means:
 $U_B \geq U_E = 1.7 \text{ V} + 20 \text{ mA} \times R_B$

Information on components for power bridging, system cabling, and marking can be found in the INTERFACE catalog or at www.phoenixcontact.net/products

- Highly compact isolating amplifier for electrical isolation, conversion, and filtering of standard analog signals
- Supplied by an output loop
- Does not require any additional auxiliary voltage
- Up to 74 signal combinations can be configured using DIP switches
- Voltage input from mV voltages right up to 30 volts
- Current input from 2 mA right up to 40 mA
- 2-way isolation
- Standard configuration:
Input 2...10 V, output 4...20 mA

Notes:
Other input signals that have not been listed can be provided on request.
Information on components for power bridging, system cabling, and marking can be found in the INTERFACE catalog or at www.phoenixcontact.net/products

- Universal temperature transducer for electrical isolation, conversion, amplification, and filtering of resistance thermometers and remote resistance-type sensors
- High level of accuracy over the entire measuring range
- For 2-, 3- or 4-conductor sensors according to IEC 751, JIS, GOST
- Configurable via DIP switches and software
- Software available free of charge on the Internet
- Power supply possible through the foot element (T-Connector)
- Supports fault monitoring
- Standard configuration: Pt 100 sensor IEC 751; 3-conductor; -50 ... 150°C; 4 ... 20 mA output; error evaluation according to NE43 (downscale); fault monitoring contact responds on any error

Notes:
The configuration software can be downloaded from the Internet: www.phoenixcontact.net/products
For information on the programming adapter, refer to page 119
Information about power bridging, system cabling, and marking components can be found starting at page 88

 Class I, Div. 2, Groups A, B, C, D T5 applied for

- Highly compact loop-powered temperature transducer for electrical isolation, conversion, amplification, and filtering of Pt 100 signals to create standard signals
- Supplied by an output loop
- Does not require any additional auxiliary voltage
- Temperature measuring range of -150°C to +300°C
- 2-, 3- or 4-conductor Pt 100 sensors
- Input signals can be configured via DIP switches
- 2-way isolation
- Error signaling via diagnostic LED and analog signal

Notes:
 To order a product with an order configuration, please enter the desired configuration by referring to the order key; see below.
 Information about power bridging, system cabling, and marking components can be found starting at page 88

Frequency
Frequency transducers
For up to 80 kHz

Ex n

Frequency transducer for up to 80 kHz

Housing width 6.2 mm

Configurable 3-way isolated frequency transducer.

- Suitable for the connection of NAMUR proximity sensors (IEC 60947-5-6 and EN 50227) as well as for sensors with NPN and PNP outputs that generate a frequency signal
- The device is configured via DIP switches
- Frequency range is freely adjustable via a press/slide button ("teach-in wheel")
- Supports fault monitoring
- Standard configuration: NAMUR sensor; mean-value generation "OFF"; 0.002 Hz ... 20 kHz frequency range; 4 ... 20 mA output; error evaluation NE43 (downscale); fault monitoring contact responds on any error

System cabling

A high number of channels enables analog signal transmission across 6 mm in a confined space for many applications. In this kind of context, in particular, it is really important to have access to wiring solutions that avoid errors and are time-efficient, thereby cutting costs.

The MINI Analog system cabling solution allows you to wire up to eight channels quickly, easily, and without errors.

System cabling can take various forms.

System cabling with a front adapter

This includes:

- A 16-pos. FLK cable
- The V8 system adapter for MINI Analog modules
- A front adapter that needs to be specifically selected based on the analog card of the controller

With this solution, all you need to do is connect the components together. There is virtually no wiring effort involved. What's more, it completely rules out wiring errors, as the pre-assembled components ensure correct assignment by virtue of their design.

System cabling without a front adapter

The version that does not require the use of a front adapter is the ideal addition.

This solution involves using a 16-pos. FLK cable with open ends on one side. The open ends are fitted with ferrules and are numbered. This allows you to create a system cabling connection to virtually any module without having to fit a front adapter. The other advantage is that you can implement system cabling on the module side quickly, easily, and without errors.

System cabling with a front adapter

The tables below are designed to serve as a configuration aid. Details of other solutions are available on the Internet or on request.

Configuration aid for MINI Analog system cabling

V8 system adapter for MINI Analog

16-pos. VIP or FLK cable with open ends

System cabling without a front adapter

Innovative concept

Thanks to its innovative design concept, the MINI MCR-SL-V8-FLK 16 A MINI Analog system adapter can be used on both the input and output side. Consequently, there is nothing at all to prevent you from using the same components for system cabling on both output and input modules.

Complete flexibility

The proven FLK cable series offers complete flexibility in terms of selection and is the ideal solution for system cabling with a front adapter. The flat and flexible plug connections mean that the products can be easily installed in any analog module.

Increased protection

The new VIP cables with molded FLK plugs offer enhanced protection in harsh industrial environments. If you opt for system cabling without a front adapter, you can enjoy all the advantages of the new VIP cables on the system adapter side.

Addition

If the application demands a form of system cabling with fewer than eight channels, the MINI MCR-SL-TB feed-through terminal block (page 88) represents the perfect addition.

MINI Analog system cabling

Accessories

MINI Analog multiplexer

FLK pin strip assignment

- Generates an analog output from up to eight analog input signals – parallel analog signals are transmitted serially via a cable
- The desired number of channels is selected via DIP switches (8, 6, 4 or 2 channels)
- The channel currently switched is indicated as a bit pattern via three digital outputs
- Two clock cycles for execution can be selected via DIP switches (one- or two-second clock)
- Supplied by an output loop
- For 4 ... 20 mA current signals
- Can be easily snapped onto MINI Analog modules with screw connection
- Huge reduction in analog inputs at controllers
- System cabling on the output side using pre-assembled FLK cables with open ends.

Notes:

For six, four or two channels you will also need the corresponding number of feed-through terminal blocks (i.e., two, four or six).

Multiplexer for MINI Analog modules with screw connection

MINI Analog feed-through terminal block

For round cable with one open end, see "System cabling for controllers" section
For round cable with one open end, see "System cabling for controllers" section

Monitoring of eight motor temperatures with just one analog control input

Termination carrier for MINI Analog isolating amplifier

TC... termination carriers are compact solutions for conveniently and smoothly connecting standard DIN rail isolating amplifiers from the MINI Analog series to input/output cards of automation systems using system cables.

The most compact isolating amplifiers combined with the most compact and flexible module carriers on the market enable you to achieve a hitherto unparalleled packing density in your control cabinet together with professional system cabling.

Compact

- The compact design associated with MINI Analog saves up to 65% of space in the control cabinet

Robust and reliable

- Stable, vibration-resistant aluminum carrier device profile
- PCB is completely decoupled from isolating amplifiers
- PCB without active electronics
- Redundant supply via separate DIN rail module
- Horizontal or vertical DIN rail mounting

Flexible

- Profile sections without pitch markings
- Quick and safe module connection with plug-in cable sets
- Horizontal or vertical DIN rail mounting
- Can be flexibly adapted to suit any controller or higher-level control system
- Solutions tailored to your requirements on request
- Available pre-assembled with modules and wired, or for self-assembly

Select standard DIN rail device

Select module carrier

Select controller-specific front adapter and system cable

Solutions are also available for MACX Analog, MACX Analog Ex, and Safety

Termination carrier for MINI Analog isolating amplifier

The **TC-D37SUB-ADIO16-M-P-UNI** universal termination carrier is a compact solution which connects isolating amplifiers from the MINI Analog series to input/output cards of automation systems.

The **TC-D37SUB-AIO16-M-PS-UNI** termination carrier version also enables the coupling and decoupling of HART signals.

- Connection of up to 16 channels
- Can be universally connected, thanks to 37-pos. D-SUB cable with open ends. This enables flexible connection to automation systems
- Redundant power supply, decoupled from diode via separate MINI MCR-PTB power module and MINI MCR-SL-TB feed-through terminal block

Notes:
Contact us: together, we can develop optimum solutions for your automation system with the termination carrier for MINI Analog.

LINETRAB LIT

The ideal addition to MINI Analog - the innovative surge protection solution in 6.2 mm housing.

Because the LINETRAB LIT and MINI Analog housing is the same shape, you can benefit from the numerous advantages of system cabling. The advantage of combining MINI Analog and LINETRAB LIT products is that it enables you to set up a space-saving, protected, and optimally coordinated signal chain from the sensor right up to the controller.

The tables below are designed to serve as configuration aids for combining MINI Analog and LINETRAB products.

On the left, you will find a list of the components and combination options for setting up system cabling between MINI Analog and LINETRAB.

For details of system cabling solutions that can be used between MINI Analog and the controller side, please refer to page 92.

For more detailed information on LINETRAB LIT surge protection modules, please see the TRABTECH catalog.

Components required for system cabling

Available 16-pos. VIP... round cables			V8 system adapter for MINI Analog
Type	Length	Order No.	Type
VIP-CAB-FLK16/FR/FR/0,14/0,5M	0.5 m	2900154	2 x MINI MCR-SL-V8-FLK 16-A (in the catalog on page 94)
VIP-CAB-FLK16/FR/FR/0,14/1,0M	1.0 m	2900155	
VIP-CAB-FLK16/FR/FR/0,14/2,0M	2.0 m	2900156	

VIP... round cables are available in special lengths on request.

VIP system cable

The new VIP cables provide a way of setting up secure and robust connections, even in harsh industrial environments.

Innovative concept

The MINI Analog system adapter does not just support system cabling on the input and output sides. It also allows cabling to be installed with LINETRAB surge protection modules quickly, easily, and without errors.

Increased protection

In addition to all the advantages associated with electrical isolation, filtering, amplification, and the conversion of standard analog signals using MINI Analog, there is now also the option of effective surge protection.

Surge protection

Surge protection is a reliable means of actively preventing and protecting against system damage and downtimes. LINETRAB is able to limit transient surge voltages safely and without affecting the signal - all in a compact device with a design width of just 6.2 mm.

Reliable and safe

MACX Analog - safe and high-performance signal isolating amplifiers. This product range enables you to safely isolate, condition, filter, and amplify all the signals of your system.

In all phases of the product life cycle, the MACX Analog range has been consistently developed and produced according to standards for functional safety. Save planning and operating costs – by combining high signal flexibility with safe isolation and SIL evaluation.

The universal nature of the product range provides you with a solution for all applications using analog signal transmission. You are free to choose between either multi-functional high-end devices or reasonably-priced standard modules with exactly the right functions.

Choose the right MACX Analog isolating amplifier for your application:

Analog IN/OUT

- Configurable 3-way isolating amplifiers
- Repeater power supplies with HART signal transmission for supplying 2-conductor transmitters
- Output isolating amplifiers with HART signal transmission

Temperature

- Universal temperature transducers for resistance thermometers, resistance-type sensors, potentiometers, thermocouples, and mV sources – also with safe limit value relays as an option
- Configurable temperature transducer for resistance thermometers and resistance-type sensors
- Configurable temperature transducer for thermocouples and mV sources

Digital IN

- Isolation amplifiers with input for NAMUR proximity sensor or switch
- Single-channel with PDT or passive transistor output
- Single-channel with double N/O contact output
- Two-channel with one N/O contact output per channel
- Two-channel with one PDT or passive transistor output per channel

Functional safety – from the initial idea to the finished product

Phoenix Contact meets the requirements of functional safety according to IEC 61508 in a standardized development process. Here, all fault avoidance and fault control measures are taken into consideration, from the very development and production

of a device right up to device operation. These measures are audited within the scope of a full assessment by an independent test center.

Phoenix Contact therefore makes a significant contribution to high system safety and availability.

DIN rail connector-compatible

The DIN rail connector enables the modular bridging of the 24 V supply voltage.

Wide-range power supply

The modules featuring a wide-range power supply (...-UP) can be used in all power supply networks the world over without the need for additional power supply units.

Safe and reliable functions

– Consistent SIL certification. This ensures the highest level of reliability and safety for your systems.

Precise transmission and high operational reliability

– Thanks to patented transmission concept

Easy configuration

– Without software via DIP switches on the device front or with the operator interface and display unit.

Easy configuration and monitoring

– Either via FDT/DTM or user-friendly stand-alone software – with integrated monitoring function.

Flexible power bridging

– The DIN rail connector simplifies wiring, system expansion or module replacement during operation.

Easy-maintenance connection technology

– Plug-in connection terminal blocks with screw connection or fast push-in technology – coded, with integrated sockets.

Precise transmission, long service life

– Patented circuit concepts ensure precise signal transmission and minimal self-heating.

Even for the Ex area

– Maximum explosion protection for all Ex zones with the MACX Analog Ex range.

Fast and error-free signal connection

– Compact termination carriers connect MACX Analog devices to the automation system – plug and play.

**Universal,
more than 1600 signal combinations**

Functional safety
Ex: // Applied for: cUL / UL
Housing width 12.5 mm

Universal isolating amplifier for operating 4-conductor measuring transducers

- Analog isolating amplifier for isolating, filtering, amplifying, and converting standard analog signals
- Configurable input and output signals, including bipolar current and voltage signals
- 3-way electrical isolation
- Over 1600 signal conversions can be set via DIP switches on the front
- 10 kHz limit frequency for time-critical applications
- Output active or passive
- Plug-in capable screw or spring-cage connection method
- Power supply via DIN rail connector possible
- Status indicator for supply voltage
- Up to SIL 2 according to EN 61508
- Installation in zone 2 permissible

Temperature Temperature transducer

Ex n

For resistance thermometers and resistance-type sensors

Housing width 12.5 mm

Programmable temperature transducer for operating resistance thermometers and resistance-type sensors. The measured values are converted into a linear 0 ... 20 mA or 4 ... 20 mA signal.

- Input for resistance thermometers and resistance-type sensors
- 0 ... 20 mA or 4 ... 20 mA output
- Configuration via software (FDT/DTM): Sensor type, connection method, measuring range, measuring unit, filter, alarm signal, and output range
- Programming during operation and also voltage-free using IFS-USB-PROG-ADAPTER programming adapter
- Status indicator for supply voltage, cable, sensor, and module errors
- 3-way electrical isolation
- Power supply via DIN rail connector possible
- Up to SIL 2 according to EN 61508
- Installation in zone 2 permitted

Temperature Temperature transducer

Universal, with switching output,
wide-range power supply

Functional safety
Ex:
Housing width 17.5 mm

Universal temperature transducer with freely configurable properties

- Input for resistance thermometers, thermocouples, resistance-type sensors, potentiometers, and mV sources
- Measure differential temperatures
- Freely programmable input and output
- Option of inverse output signal ranges
- Relay switching output
- Configuration via software (FDT-DTM) or IFS-OP-UNIT operating and display unit
- Programming during operation and also voltage-free using IFS-USB-PROG-ADAPTER programming adapter
- Plug-in capable screw or spring-cage connection method
- Cold junction compensation with separate connector
- Wide-range power supply: 19.2 ... 253 V AC/DC
- Status indicator for supply voltage, cable, sensor, and module errors
- Up to SIL 2 according to EN 61508
- Installation in zone 2 permitted

Temperature conversion guide for °C to °F:

$$T [°F] = \frac{9}{5} T [°C] + 32$$

Accessories

Operating and display unit

- Local display of actual values
- Copy function
- Easy guided operation
- Easy configuration without PC software
- Operating and display unit can be snapped directly onto compatible devices with a housing width of 35 mm
- DIN rail mounting possible for thinner devices in conjunction with cradle unit
- Backlighting
- Installation in zone 2 permissible

Can be snapped directly onto compatible 35 mm devices

Notes:

Housing width 12.5 mm

Signal output: PDT relay

NAMUR isolation amplifier for operating proximity sensors and mechanical contacts

- Input for NAMUR proximity sensors (EN 60947-5-6), floating contacts or contacts with resistance circuit
- Relay signal output (PDT)
- Reversible direction of action (operating current or closed-circuit current behavior)
- Line fault detection (LFD), can be activated/deactivated, error message signaled by red flashing LED with de-excitation of output relay
- Power supply and error indication possible via the DIN rail connector
- LED displays for indicating supply voltage, circuit state, and malfunctions to NAMUR NE 44
- 3-way electrical isolation
- Up to SIL 2 according to EN 61508
- Installation in zone 2 permitted

Notes:
Information about the supply and error evaluation module as well as about the DIN rail connectors and marking material can be found from page 126
Information about resistance circuits is given on page 183

Accessories

Power and error message module

Power and error message module for feeding the 24 V supply voltage to the DIN rail connectors and signaling line faults and power supply failures.

- One-time or redundant supply, decoupled from diode, protected against polarization
- Supply current up to 3.75 A
- Relay output (PDT) and flashing LED for error messages
- Error message in the event of a power supply failure or fuse fault
- Bus cable fault message for MACX MCR-...(2)NAM... devices connected via DIN rail connectors
- Replaceable fuse
- Installation in zone 2 permissible

Termination carrier for MACX Analog Ex isolating amplifiers

TC... termination carriers are compact solutions for quickly and smoothly connecting DIN rail devices from the MACX Analog Ex series to input/output cards of automation systems using system cabling.

The termination carriers combine the advantages of modular DIN rail devices with those offered by plug and play rapid cabling solutions to provide a consistent solution for system technology.

Compact

- Saves up to 30% of space due to compact design

Robust and reliable

- Stable, vibration-resistant aluminum carrier device profile
- PCB is completely decoupled from modules
- PCB without active components
- Redundant supply and monitoring in separate DIN rail module

Easy maintenance

- Use of standard DIN rail devices
- Easy access to connection points
- Quick and safe module connection with plug-in and coded cable sets

Flexible

- Horizontal or vertical DIN rail mounting
- Profile section without pitch markings for I/O cards with specific number of channels
- Can be specifically adapted for I/O cards of various automation systems with different system plug types

Select standard DIN rail device

Select module carrier

Select controller-specific front adapter and system cable

Solutions are also available for MINI Analog, MACX Analog Ex, and Safety

Termination carrier for MACX Analog Ex isolating amplifiers

The **TC-D37SUB-ADIO16-EX-P-UNI** universal termination carrier is a compact solution which connects isolating amplifiers from the MACX Analog series to analog or binary input/output cards of automation systems.

The **TC-D37SUB-AIO16-EX-PS-UNI** termination carrier design, when combined with the MACX MCR-S-MUX HART multiplexer, also enables communication between HART-capable field devices and a management system.

- Connection of up to 16 single-channel (Ex i-)isolating amplifiers
- Universal 1:1 signal routing to a 37-pos. D-SUB plug-in connector
- For system cables with D-SUB socket and open ends for universal connection
- Redundant supply and monitoring in separate DIN rail module

Notes:
Contact us: specific termination carrier designs for I/O modules of various automation systems are available, planned or can be implemented according to your specifications.

Also for special applications

MCR Analog isolating amplifiers and digital displays – for special applications using signal processing.

Isolating amplifiers in the MCR Analog range can be used to record temperatures directly in the field, for example, or to convert digital signals into analog signals. You can monitor your process values using digital displays.

Choose the right MACX Analog isolating amplifier for your application:

Analog IN/Analog OUT

- Configurable signal multipliers to double standard analog signals
- Configurable loop-powered isolators and standard passive isolators for temperature
- Programmable temperature transducers
- Configurable temperature transducers for Pt 100
- Temperature relay for Pt 100
- Programmable loop-powered temperature transducers.

Frequency

- Programmable frequency transducers for frequencies of up to 120 kHz

Limit value switches

- Limit value switches for standard analog signals

Digital displays

- Programmable digital displays for standard signals
- Setpoint adjuster

Your advantages:

- High operational reliability in the event of disturbances, thanks to electrical isolation
- User-friendly wiring, thanks to plug-in connection terminal blocks
- Easy configuration via software, DIP switches or display keypad
- Digital displays can be programmed without software: via the keypad on the front
- The digital displays are easy to read, thanks to the large five-digit display

Analog IN / Analog OUT
3-way isolating amplifier

With fixed signal combinations

Housing width 12.5 mm

- Processing standard signals
- Fixed setting of input and output signals
- 3-way isolation

Analog IN / Analog OUT passive isolators

**1-channel,
with safe isolation**

Housing width 12.5 mm

- Electrical isolation without additional auxiliary power supply
- Current signals 0(4)...20 mA
- Safe isolation

Notes:

When using passive isolators, make sure that the current sourcing voltage of the measuring transducer U_B is sufficient to drive the maximum current of 20 mA via the passive isolator with the voltage drop $U_V = 2.5$ V and the load R_B .
This means:
 $U_B \geq U_V + 20 \text{ mA} \times R_B$

Technical data

Input data	0 ... 20 mA / 4 ... 20 mA
Input signal	2.5 V (at I = 20 mA)
Voltage drop	< 50 μ A
Response current	50 mA (100 mA overload)
Maximum input current	30 V (30 V overload)
Maximum input voltage	33 V 5% (with Zener diode)
Input voltage limitation	
Output data	
Output signal	0 ... 20 mA / 4 ... 20 mA
Maximum output signal	< 50 mA
Load R_B	$\leq 1375 \Omega$ (at I = 20 mA output signal)
Ripple	< 5 mV (rms)
General data	
Maximum transmission error	$\leq 0.1\%$ (of final value)
Additional error per 100 Ω load	0.02% (of measured value / 100 Ω load)
Temperature coefficient	$\leq 0.002\%/K$ (of measured value / 100 Ω load)
Test voltage input/output	4 kV (50 Hz, 1 min.)
Protection against electric shock	Increased insulation according to DIN EN 61 010 part 1 and safe isolation according to VDE 0100 part 410 along the lines of VDE 0106 part 101 up to 300 V AC/DC for surge voltage category II and pollution degree 2 between all isolated distances.
Ambient temperature (operation)	-10°C ... 70°C

Ordering data

Description	Type	Order No.	Pcs. / Pkt.
MCR passive isolator , for electrical isolation of current signals without auxiliary power	MCR-SL-1CLP-I-I-00-4KV	2814841	1

Input voltage in relation to load for $I_A = 20$ mA

The diagram shows input voltage U_i in relation to load R_B taking into account voltage failure U_V .
If the load is known, the minimum voltage the sensor must supply in order to drive the maximum current of 20 mA via the passive isolator and the load can be read on the Y-axis.

Analog IN / Analog OUT
passive isolators

1-, 2- or 4-channel options

- Electrical isolation without additional auxiliary power supply
- Current signals 0(4)...20 mA
- Alternatively 1-, 2- or 4-channel version

Notes:

When using passive isolators, make sure that the current sourcing voltage of the measuring transducer U_B is sufficient to drive the maximum current of 20 mA via the passive isolator with the voltage drop $U_V = 2.5 \text{ V}$ and the load R_B .
This means:

$$U_B \geq U_E = 2.5 \text{ V} + 20 \text{ mA} \times R_B$$

Input data	
Input signal	0 ... 20 mA / 4 ... 20 mA

MCR-T-UI ¹)	2814090	1
MCR-T-UI-NC ¹)	2814100	1

Order key for MCR-T-UI(-E)... (standard configuration entered as an example)

Order No.	Sensor type	Input characteristic curve	Connection technology	Measuring range:		Measuring unit	Output	Output characteristic curve	Factory calibration certificate (FCC)
				Start	End				
2814113	PT100	D	3	-200.0	+850.0	C	OUT02	N	NONE
2814113 ≙ MCR-T-UI-E	See tables under "Sensor type"	D ≙ DIN S ≙ SAMA (see table)	2 ≙ 2-conductor 3 ≙ 3-conductor 4 ≙ 4-conductor	for 0 mA (e.g., -200.0°C)	for 20 mA (e.g., +850.0°C)	C ≙ °C F ≙ °F V ≙ mV O ≙ W P ≙ %	OUT01 ≙ 0...20 mA OUT02 ≙ 4...20 mA OUT03 ≙ 0...10 V OUT05 ≙ 0...5 V OUT13 ≙ -5...+5 V OUT14 ≙ -10...+10 V	N ≙ Normal I ≙ Inverse	NONE ≙ without FCC YES ≙ with FCC (a fee is charged)
2814090 ≙ MCR-T-UI		0 ≙ for Ni1000 (Landis & Gyr), Cu10, Cu50, Cu53, KTY81-110, thermocouple, resistor, potentiometer, voltage	0 ≙ for thermocouple, resistor, potentiometer, voltage						YESPLUS ≙ FCC with 5 measuring points (a fee is charged)

Resistance thermometers

Sensor type 1)	Standard (input characteristic curve)	Measuring range	Smallest measuring range span
PT...	DIN/SAMA	-200°C ... 850°C	0.4 K
NL...	DIN/SAMA	-60°C ... 180°C	0.4 K
Ni1000	Landis & Gyr	-50°C ... 160°C	0.4 K
CU10	SAMA	-70°C ... 500°C	0.4 K
CU50	-	-50°C ... 200°C	0.4 K
CU53	-	-50°C ... 180°C	0.4 K
KTY81	Philips	-55°C ... 150°C	0.4 K
KTY84	-	-40°C ... 300°C	0.4 K

Temperature ranges according to IEC 60751/EN 60751 and DIN 43760 SAMA RC 21-4-1966 with 2, 3 or 4-conductor circuit.

1) Note: Pt sensors in increments of 10, 20, ...100 and 100, 200, ...1000, 2000.
KTY81 ≙ KTY81-110.

Other types or characteristic curves available on request.

Thermocouples

Sensor type	Thermocouple	Measuring range	Smallest measuring range span
U	Cu-CuNi	-200°C ... 600°C	> 1 K
T 2)	Cu-CuNi	-200°C ... 400°C	> 1 K
L	Fe-CuNi	-200°C ... 900°C	> 1 K
J 2)	Fe-CuNi	-210°C ... 1200°C	> 1 K
E 2)	NiCr-CuNi	-226°C ... 1000°C	> 1 K
K 2)	NiCr-Ni	-200°C ... 1372°C	> 1 K
N 2)	NiCrSi-NiSi	-200°C ... 1300°C	> 1 K
S 2)	Pt10Rh-Pt	-50°C ... 1768°C	> 4 K
R 2)	Pt13Rh-Pt	-50°C ... 1768°C	> 4 K
B 2)	Pt30Rh-Pt6Rh	500°C ... 1820°C	> 10 K
C	-	-18°C ... 2316°C	> 4 K
W	-	-18°C ... 2316°C	> 4 K
HK	-	-200°C ... 800°C	> 1 K

2) Thermocouples according to IEC 60584/EN 60584.

Other types or characteristic curves available on request.

Resistors, potentiometers, mV voltages

Sensor type	Input	Measuring range	Smallest measuring range span
RES	Resistor	0 Ω ... 8000 Ω (2-conductor)	2 Ω
POT	Potentiometer (max. 8 kΩ)	0 ... 100% (3-conductor)	0.2%
V01	Voltage	-20 mV ... +2400 mV	2 mV

Temperature conversion guide for °C to °F:

$$T [°F] = \frac{9}{5} T [°C] + 32$$

Ordering examples with different input versions:

Resistance thermometer

Thermocouple

Voltage

Resistor

(2-conductor connection)

Potentiometer

(3-conductor connection)

Application examples:

Resistance thermometer: 2-conductor connection technology

Application:

- For short distances (< 10 m)

Please note:

- Cable resistances R_{L1} and R_{L2} are incorporated in the measurement result directly and falsify the result accordingly (example for Pt 100: $0.385 \Omega \pm 1 K$). Compensation of $\pm 5\%$ is possible.

Resistance thermometer: 3-conductor connection technology

Application:

- For long distances between the Pt 100 sensor and the MCR module ($R_{L1}, R_{L2}, R_{L3} \leq 25 \Omega$)

Please note:

- To compensate the cable resistance, all cable resistances must have exactly the same values ($R_{L1} = R_{L2} = R_{L3}$)

Resistance thermometer: 4-conductor connection technology

Application:

- For long distances between the Pt 100 sensor and the MCR module and different cable resistances ($R_{L1} \neq R_{L2} \neq R_{L3} \neq R_{L4}$)

Please note:

- The cable resistance ($R_{L2} + R_{L4}$) must not exceed a value of 50 Ω.

Potentiometer

Application:

- For short distances and gradual changes.

Please note:

- Cable resistances R_{L1} and R_{L2} are incorporated in the measurement result directly and falsify the result accordingly. Compensation of $\pm 5\%$ is possible.

Thermocouple: absolute temperature measurement

Application:

- Connecting a thermocouple or an mV signal.

Note:

- Activate cold junction compensation for the device in the case of thermocouple measurements.

Thermocouple: differential temperature measurement

Application:

- Differential temperature measurement with thermocouples.
- Deactivate cold junction compensation for the device.

Temperature

Temperature transducer

For Pt 100, either voltage or current output

Housing width 17.5 mm

- Temperature range adjustable via DIP switch
- ZERO/SPAN adjustment
- Open circuit detection
- Alternatively with galvanically isolated supply voltage

Notes:
When ordering, you must use the order key to specify the desired configuration.

Connection examples for common frequency transmitters

2-wire DC (mechanical contact)

3-wire DC
• With PNP transistor output

3-wire DC
• PNP transistor with pull-down resistance

2-wire DC NAMUR sensor

• With NPN transistor output

• NPN transistor with pull-up resistance

4-wire DC
• With PNP transistor output

Incremental rotary transducer with push-pull:
• Supply of the external signaling encoder

Incremental rotary transducer with HTL logic:
• Supply of the external signaling encoder

• With NPN transistor output

• Supply of the signaling encoder from the module

• Supply of the signaling encoder from the module

Application examples:

The **MCR-F-UI-DC** frequency transducer converts the pulse signal into an analog standard signal that provides information about the numbers of bottles in filling systems recorded in a defined time unit.

For speed measurements, it is possible to enter the measuring range in revolutions per minute (rpm) and to display the current measured value on the device.

The frequency measuring transducer has an automatic measuring range selection function (autorange) to ensure the best possible resolution. This permits response times to be reduced to a minimum and the measured value is optimally adapted to the input value.

Programmable limit value switch

MCR-PSP-DC

- For thermocouple sensors, resistance thermometers, and linear resistors
- For current or voltage signals
- Four independently adjustable switching thresholds
- With or without electrical isolation of input signals
- Programming via membrane keypad or **MCR-PICONF-WIN** software
- Continuous measured value display

Further information about the configuration software can be found on page 149

Highly compact – leading technology

MACX Analog Ex – single- and two-channel signal isolating amplifiers for intrinsically safe circuits in the Ex area.

MACX Analog Ex isolating amplifiers ensure maximum system safety and explosion protection within a minimum amount of space. With a design width of just 12.5 mm, this comprehensive range for analog signal conditioning is approved according to ATEX and IECEx and consistently SIL-certified.

Maximum explosion protection for all Ex zones and gas groups

Many process technology systems have areas where potentially explosive atmospheres may occur. As such, measuring and control circuits are usually designed with intrinsic safety protection type Ex i.

MACX Analog Ex i isolating amplifiers and measuring transducers isolate intrinsically safe circuits from non-intrinsically safe circuits and safely limit the energy supplied to the Ex area. Furthermore, they handle extensive signal conditioning tasks.

All MACX Analog Ex isolating amplifiers are approved in accordance with the applicable ATEX and IECEx standards:

- [Ex ia] – for intrinsically safe circuits up to Ex zone 0 and Ex zone 20
- Ex n – for installing devices in Ex zone 2
- In addition, relevant national approvals

such as UL and GOST are available.

Choose the right MACX Analog Ex isolating amplifier for your application:

Analog IN

Measuring transducer repeater power supply and input isolating amplifier for the intrinsically safe operation of 2-wire transmitters, 4-conductor measuring transducers, and current sources.

Analog OUT

Output isolating amplifiers for the intrinsically safe operation of control valves, I/P converters, and displays.

Temperature

Configurable temperature transducers for the intrinsically safe operation of resistance thermometers, remote resistance-type sensors, thermocouples, and mV sources – with safe limit value relays as an option.

Digital IN

NAMUR isolating amplifiers for the intrinsically safe operation of proximity sensors and switches.

Digital OUT

Solenoid drivers for the intrinsically safe operation of solenoid valves and alarm transmitters.

DIN rail connector-compatible

The DIN rail connector enables the modular bridging of the 24 V supply voltage.

Wide-range power supply

The modules featuring a wide-range power supply (...-UP) can be used in all power supply networks the world over without the need for additional power supply units.

Significant space savings

- Housing width of just 12.5 mm for all single- and two-channel 24 V devices. Saves up to 45% of space, when compared to design widths up to 22.5 mm.

Easy-maintenance connection method:

- Plug-in connection terminal blocks with screw connection or fast push-in technology - coded, with integrated sockets.

Flexible power bridging and diagnostics

- Supply voltage bridging and the option of redundant, diode-decoupled supply and error indication.

Easy configuration and monitoring

- Either via FDT/DTM or user-friendly stand-alone software - with integrated monitoring function.

Easy configuration

- Without software via DIP switches on the device front or with the operator interface and display unit.

Precise transmission, long service life

- Patented circuit concepts ensure precise transmission and minimal self-heating.

High operational reliability

- High operational reliability, thanks to safe 3-way electrical isolation.

Safe and reliable functions

- Consistent SIL certification. This ensures the highest level of reliability and safety for your systems.

Fast and error-free signal connection

- Compact termination carriers connect MACX Analog Ex devices to the automation system - plug and play.

Facts about explosion protection

The chemical and petrochemical industries involve industrial processes which produce explosive atmospheres. They are caused, for example, by gases, fumes or vapors. Explosive atmospheres are also likely to occur in mills, silos, and sugar and fodder factories due to the dust present there.

Therefore, electrical devices in potentially explosive areas are subject to special directives.

Devices and protective systems in potentially explosive areas

European Parliament directive 94/9/EC of March 23, 1994 (ATEX manufacturer directive) is of particular importance within CENELEC (European Community and Western European EFTA states). It is designed to facilitate the harmonization of legal provisions in the member states of the European Union for devices and protective systems in terms of ensuring correct use in potentially explosive areas. Directive 94/9/EC must be applied to all explosion-protected devices and protective systems placed on the market in the European Union.

The scope of this directive also includes safety, monitoring, and control devices which are used outside of potentially explosive areas, but which are necessary for, or contribute towards, the safe operation of devices and protective systems with respect to explosion hazards.

The term **device** includes machines, equipment, stationary or mobile devices, control components, and system accessories. The directive also covers alarm and protection systems which are meant to be used, either individually or in combination, for the generation, transmission, storage, measurement, control, and conversion of energy as well as for processing materials and which have the potential to ignite and cause an explosion.

Protective systems are devices designed to stop an incipient explosion immediately and/or restrict the area affected by the explosion, and which are placed on the market separately as autonomous systems.

Components are defined as those parts that are necessary for ensuring the safe operation of devices and protective systems, but do not perform an autonomous function in themselves.

European directives are implemented in ordinances or laws at a national level.

Systems in potentially explosive areas

Directive 1999/92/EC (ATEX Operator Directive) was passed in Europe to regulate the operation of systems in potentially explosive areas.

Terminology associated with the Ex area	
Explosive atmosphere	A mixture of combustible gases, steam, vapors or dust and air in atmospheric conditions that allow the entire mixture to combust once ignited.
Potentially explosive area	An area where the atmosphere has the potential to explode due to local or operational conditions ("Ex area").
Electrical equipment	The entire set of components, electric circuits or parts of electric circuits that are usually located within a single housing.
Intrinsically safe electrical equipment	An electrical device in which all circuits are intrinsically safe. Note: these devices may be used directly in the Ex area.
Associated equipment	Electrical devices that contain both intrinsically safe and non-intrinsically safe circuits and that are designed in such a way that the non-intrinsically safe circuits cannot influence the intrinsically safe ones. Note: associated electrical equipment must not be used directly in potentially explosive areas without additional protection defined by a further protection type.

Classification into groups

The general stipulations of EN 60079-0 divide electrical devices for potentially explosive areas into three groups.

Group I:

Electrical devices for firedamp areas (mines) which are susceptible to pit gases (methane) and/or combustible dusts (coal dust).

Group II:

Electrical devices for operation in areas where explosive gas atmospheres are likely

to occur, excluding mines susceptible to firedamp.

This also includes devices for the chemical, petrochemical, and pharmaceutical industries as well as for waste water treatment.

Electrical devices are further divided into subcategories according to the properties of the explosive atmosphere.

In the case of the intrinsic safety protection type, classification is based on the minimum ignition energy of the gas or vapor.

Designation	Typical gas	Ignition energy/[iJ] Intrinsic safety
II A	Propane	> 180
II B	Ethylene	60 ... 180
II C	Hydrogen	< 60

Group III:

Electrical devices for operation in areas where explosive dust atmospheres are likely to occur, excluding mines susceptible to firedamp.

This includes devices for areas associated with the food industry (mills, silos), for example.

Electrical devices are further divided into subcategories according to the properties of the explosive atmosphere.

Designation	Dusts
III A	Combustible flyings
III B	Non-conductive dust
III C	Conductive dust

Classification into temperature classes

Simply dividing the various gases into explosion or gas groups according to their minimum ignition energy is not sufficient to describe the gases adequately with regard to their explosive properties.

A gas may explode either when the ignition energy is exceeded or where there is an excessively high temperature caused by a hot surface. This ignition temperature is, however, not usually linked to the ignition energy, i.e., a gas with a low ignition energy does not necessarily explode at a low temperature. Consequently, devices that are used directly in potentially explosive atmospheres are divided into temperature classes. Temperature classes define the maximum surface temperature even in the event of errors. Parallel to this, the gases are classified according to their different ignition temperatures.

Temperature class	Maximum permissible surface temperature of equipment °C	Ignition temperatures of combustible substances °C
T 1	450	> 450
T 2	300	> 300 ≤ 450
T 3	200	> 200 ≤ 300
T 4	135	> 135 ≤ 200
T 5	100	> 100 ≤ 135
T 6	85	> 85 ≤ 100

The following table provides an overview of the ignition energies and ignition temperatures for certain gases:

Substance	T _{ign}	Temperature class	E _{min}	Group
Ethoxyethane	170	T 4	190	II B
Ethylene	425	T 2	82	II B
Ammonia	630	T 1	14000	II A
Butane	365	T 2	250	II A
Methane	595	T 1	280	I
Propane	470	T 1	250	II A
Carbon disulfide	95	T 6	9	II C
Hydrogen	560	T 1	16	II C

Zone classification

Potentially explosive areas are divided into zones according to the probability of their occurrence. The EN 60079-10-1 standard defines the zones containing **explosive atmospheres** as follows:

Zone 0:

Area in which an explosive atmosphere is present for continuous or long periods.

These conditions are usually present inside containers, pipelines, apparatus, and tanks.

Zone 1:

Area in which an explosive atmosphere is to be expected only occasionally during normal operation.

This includes the immediate area surrounding zone 0, as well as areas close to filling and emptying equipment.

Zone 2:

Area in which an explosive atmosphere is not expected during normal operation; however, if it does occur, then it does so only rarely and for a short period.

Zone 2 includes areas that are used exclusively for storage, areas around pipe connections that can be disconnected, and generally the immediate area surrounding zone 1.

Areas that are potentially explosive as a result of **combustible dusts** are divided into the following zones according to EN 60079-10-2 (formerly: EN 61241-10):

Zone 20:

Area in which an explosive atmosphere is present for continuous, frequent or long periods in the form of an airborne cloud of combustible dust.

Zone 21:

Area in which an explosive atmosphere in the form of an airborne cloud of combustible dust is to be expected only occasionally during normal operation.

Zone 22:

Area in which an explosive atmosphere in the form of an airborne cloud of combustible dust is not expected during normal operation. However, if it does occur, then it does so only for a short period.

Categories

The ATEX Directive assigns devices for use in potentially explosive areas to categories. In IEC 60079-0, "Equipment Protection Level (EPL)" is the term used instead of "category".

In the same way that there are different zones, there are also different device categories. These consist of categories M1 and M2 for Group I and categories 1, 2, and 3 for Group II. The categories for **equipment group II** are described in more detail below:

Category 1:

Devices constructed to guarantee a very high degree of safety.

Devices in this category must guarantee the required degree of safety even in the unlikely event of a device failure and therefore be provided with measures to protect against explosion, so that:

- In the event of one integrated protection measure failing, a second, independent protection measure is able to guarantee the necessary safety.
- In the event of two independent errors, the necessary safety is guaranteed.

Category 2:

Devices constructed to guarantee a very high degree of safety.

The explosion protection measures associated with this category guarantee the required degree of safety, even in the case of frequent device failures or common error states.

Category 3:

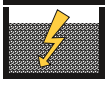

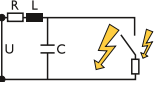

Devices constructed to guarantee a standard degree of safety.

Devices in this category guarantee an adequate degree of safety in normal operation.

The table below shows which categories are assigned to which zones:

Category	For Zone	Also possible
1	0 20	1 and 2 21 and 22
2	1 21	2 22
3	2 22	

Protection types

Protection principle	Protection type	Area of application (selection)	Standard
 <p>Isolation</p>	Oil immersion	o Transformers, relays, startup controls, switching devices	EN 60079-6

Solenoid drivers for controlling solenoid valves

In order to control intrinsically safe Ex i solenoid valves, you have to have an intrinsically safe control circuit. This is provided by the solenoid drivers that are available from Phoenix Contact.

The following must be taken into account when dimensioning your intrinsically safe control circuit:

- Valve
- Cable with corresponding resistance
- Solenoid driver

As a result, it may be the case that not all valves are compatible with the solenoid drivers.

Below is an extract from a table showing possible combinations of valves and solenoid drivers.

A complete and updated list (along with details of the technical data of suitable valves, the maximum cable lengths, and the maximum cable resistances of the individual combinations) can be found on the Internet at:

www.phoenixcontact.net/products

Example circuit

Safety-related function for the Ex area

The term SIL (safety integrity level) is becoming more and more significant in the field of process technology. It defines the requirements that a device or a system is expected to fulfill so that the failure probability can be specified. The aim is to achieve maximum possible operational reliability. If a device or system fails, a defined state is attained. Standard-based inspections are carried out to determine statistical probability.

Application of SIL on the basis of EN 61508 and EN 61511

The SIL standard is used for a wide range of industries within the process industry, including the chemical industry, refineries, oil and gas production, paper manufacturing, and conventional power generation. In addition to functional safety requirements, systems in potentially explosive areas are also subject to Ex standards EN 60079-0 ff.

EN 61508: “Functional safety of electrical/electronic/programmable electronic safety-related systems”

This standard describes the requirements that the manufacturer has to bear in mind when producing devices or systems.

EN 61511: “Functional safety - Safety instrumented systems for the process industry sector”

Standard EN 61511 describes the requirements for achieving systems with functional safety.

Compliance with the standard is determined by operators, owners, and planners on the basis of safety plans and national regulations. In addition, the standard also describes the requirements for using a device in an application on the basis of its proven effectiveness (proven in use).

SIL marking on devices

The products in the MACX range from Phoenix Contact, which have been developed in accordance with EN 61508, are marked with the designation SIL 2 or SIL 3. This indicates clearly that the devices may be suitable for safety instrumented functions (SIF).

To determine whether they can actually

be used, you need to calculate the sum of the probability failure values for all the devices in the signal circuit. The values required for this can be found in the safety manual accompanying any SIL product.

Overview of terms from SIL standards EN 61508 and EN 61511

SIL	Safety integrity level One of four discrete levels for the specification of requirements for the safety integrity of safety instrumented functions, which are assigned to the E/E/PE safety instrumented systems, where SIL 4 is the highest and SIL 1 the lowest level.	E/E/PES	Electrical/electronic/programmable electronic systems This term is used for all electrical devices or systems which can be used to execute a safety instrumented function. It includes simple electrical devices and all types of programmable logic controllers (PLCs).
EUC	Equipment under control Equipment, machines, devices or systems used in production, materials processing or transport.	PFH	Probability of dangerous failure per hour Describes the probability of a dangerous failure occurring per hour.
MTBF	Mean Time Between Failures The expected mean time between failures.	SFF	Safe failure fraction Describes the proportion of harmless failures. This is the ratio of the rate of safe failures plus the rate of diagnosed or detected faults in relation to the total failure rate of the system.
PFD	Probability of failure on demand The probability of a failure on demand. Describes the probability of a safety instrumented system failing to perform its function when required.	SIF	Safety instrumented function Describes the safety instrumented functions of a system.
PFDavg	Average probability of failure on demand The average probability of the function failing on demand.	SIS	Safety instrumented system An SIS (safety instrumented system) consists of one or more safety instrumented functions. An SIL requirement is applicable for each of these safety instrumented functions.

Ex i isolating amplifiers with SIL functional safety - MACX Analog Ex

SIL inspection

The complete signal path must be taken into account during the SIL inspection. The example shows how in a typical safety application the calculation is based on average failure probabilities of individual devices.

Table 2 of standard EN 61508-1 describes the relationship between the average failure probability and the attainable SIL. Here, the level required determines the overall budget for the sum of all PFD values.

A system with a single-channel structure with a low demand rate is used as an example; for SIL 2 the average PFD value is between 10^{-3} and $< 10^{-2}$.

The INTERFACE Analog and INTERFACE Ex product ranges include products that meet the requirements for explosion protection as well as functional safety.

Safety integrity level SIL	Operating mode with a low demand rate (average probability of the specified function failing on demand)
4	$\geq 10^{-5}$ to $< 10^{-4}$
3	$\geq 10^{-4}$ to $< 10^{-3}$
2	$\geq 10^{-3}$ to $< 10^{-2}$
1	$\geq 10^{-2}$ to $< 10^{-1}$

Safety integrity level: failure limit values for a safety function which is operated in an operating mode with a low demand rate.

Example:

A sensor and actuator are assembled in the field and are exposed to chemical and physical loads (process medium, pressure, temperature, vibration, etc.). Accordingly, these components have a high risk of failure:

- The sensor accounts for 25% of the overall PFD
- The actuator accounts for 40% of the overall PFD

Neither the failsafe controller nor the interface modules come into contact with the process medium and both are usually located in a protected control cabinet:

- The failsafe controller accounts for 15% of the overall PFD
- Each of the interface modules accounts for 10% of the overall PFD

Typically, the values form the basis for a calculation.

Analog IN

Repeater power supply, Ex i

Repeater power supply and input isolating amplifier

UL Functional safety
 Ex: Ex i / Ex ii / Ex iii // Applied for: GL
 Housing width 12.5 mm

Repeater power supply and input isolating amplifier for the operation of intrinsically safe (Ex-i) 2-conductor measuring transducers, 4-conductor measuring transducers, and mA current sources installed in Ex areas.

- 0/4 ... 20 mA input, [Ex ia] (powered or not powered)
- 0/4...20 mA output (active or passive)
- Bidirectional transmission of digital HART communication signals
- Plug-in capable screw or spring-cage connection method, with integrated sockets for HART communicators
- Terminal point with 250 Ω resistor to increase the HART impedance in the case of low-impedance systems
- 3-way electrical isolation
- Power supply via DIN rail connector possible
- Up to SIL 2 according to EN 61508
- Installation in zone 2 permitted

Notes:
Information about the supply and error evaluation module as well as about the DIN rail connectors and marking material can be found from page 182
Test plugs for test sockets can be found on page 191
Information on "Plug and play" connection using system cabling can be found from page 184

Repeater power supply and input isolating amplifier for the operation of intrinsically safe (Ex-i) 2-conductor measuring transducers, 4-conductor measuring transducers, and mA current sources installed in Ex areas.

- 0/4 ... 20 mA input, [Ex ia] (powered or not powered)
- Output 0/4...20 mA (active or passive), 0/1...5 V, can be switched via the DIP switch
- Bidirectional transmission of digital HART communication signals
- Plug-in capable screw or spring-cage connection method, with integrated sockets for HART communicators
- 250 Ω resistor that can be activated via DIP switches to increase the HART impedance in the case of low-impedance systems
- 3-way electrical isolation
- Wide-range power supply: 19.2 ... 253 V AC/DC
- Up to SIL 2 according to EN 61508
- Installation in zone 2 permitted

Notes:

Information on marking material can be found on page 127
Test plugs for test sockets can be found on page 191
1) EMC: Class A product, see page 571

Temperature transducer, Ex i

For resistance thermometers and resistance-type sensors

UL, CE, Ex, SIL, IEC
 Ex: Ex i
 Housing width 12.5 mm

Programmable temperature transducer for intrinsically safe operation of resistance thermometers and resistance-type sensors installed in Ex areas. The measured values are converted into a linear 0 ... 20 mA or 4 ... 20 mA signal.

- Input for resistance thermometers and resistance-type sensors, [Ex ia]
- 0 ... 20 mA or 4 ... 20 mA output
- Configuration via software (FDT/DTM): Sensor type, connection method, measuring range, measuring unit, filter, alarm signal, and output range
- Programming during operation with Ex measuring circuit connected and also voltage-free using IFS-USB-PROG-ADAPTER programming adapter
- Status indicator for supply voltage, cable, sensor, and module errors
- 3-way electrical isolation
- Power supply via DIN rail connector possible
- Up to SIL 2 according to EN 61508
- Installation in zone 2 permitted

Universal, with switching output, wide-range power supply

Universal temperature transducer with freely configurable properties for intrinsically safe operation of resistance thermometers, thermocouples, resistance-type sensors, and potentiometers installed in Ex areas

- Input for resistance thermometers, thermocouples, resistance-type sensors, potentiometers, and mV sources, [Ex ia]
- Measure differential temperatures
- Freely programmable input and output
- Option of inverse output signal ranges
- Relay switching output
- Configuration via software (FDT-DTM) or IFS-OP-UNIT operating and display unit
- Programming during operation with Ex measuring circuit connected and also voltage-free using IFS-USB-PROG-ADAPTER programming adapter
- Plug-in capable screw or spring-cage connection method
- Cold junction compensation with separate connector
- Wide-range power supply: 19.2 ... 253 V AC/DC
- Status indicator for supply voltage, cable, sensor, and module errors
- Up to SIL 2 according to EN 61508
- Installation in zone 2 permitted

Universal, with three limit value relays, wide-range power supply

Functional safety
Ex:
Housing width 35 mm

Universal temperature transducer with freely configurable properties for intrinsically safe operation of resistance thermometers, thermocouples, resistance-type sensors, and potentiometers installed in Ex areas

- Input for resistance thermometers, thermocouples, resistance-type sensors, potentiometers, and mV sources, [Ex ia]
- Measure differential temperatures
- Freely programmable input and output
- Option of inverse output signal ranges
- Three limit value relays, can be used in combination as a safe limit value relay
- Configuration via software (FDT-DTM) or IFS-OP-UNIT operating and display unit
- Programming during operation with Ex measuring circuit connected and also voltage-free using IFS-USB-PROG-ADAPTER programming adapter
- Plug-in capable screw or spring-cage connection method
- Cold junction compensation with separate connector
- Wide-range power supply: 19.2 ... 253 V AC/DC
- Status indicator for supply voltage, cable, sensor, and module errors
- Up to SIL 2 according to EN 61508
- Installation in zone 2 permitted

$$T [°F] = \frac{9}{5} T [°C] + 32$$

Digital IN
NAMUR isolating amplifier, Ex i

Signal output: PDT relay

Functional safety

Ex: Ex i

Housing width 12.5 mm

NAMUR isolating amplifier for intrinsically safe operation of proximity sensors and mechanical contacts installed in Ex areas.

- Input for NAMUR proximity sensors (EN 60947-5-6), floating contacts or contacts with resistance circuit, [Ex ia]
- Relay signal output (PDT)
- Reversible direction of action (operating current or closed-circuit current behavior)
- Line fault detection (LFD), can be activated/deactivated, error message signaled by red flashing LED with de-excitation of output relay
- Power supply and error indication possible via the DIN rail connector
- LED displays for indicating supply voltage, circuit state, and malfunctions to NAMUR NE 44
- 3-way electrical isolation
- Up to SIL 2 according to EN 61508
- Installation in zone 2 permitted

Technical data

NAMUR isolating amplifier for intrinsically safe operation of proximity sensors and mechanical contacts installed in Ex areas.

- Input for NAMUR proximity sensors (EN 60947-5-6), floating contacts or contacts with resistance circuit, [Ex ia]
- 2 signal outputs: transistor (passive); up to 5 kHz
- Signal output 2 can also be used as a fault signaling output
- Reversible direction of action (operating current or closed-circuit current behavior)
- Line fault detection (LFD), can be activated/deactivated, error message signaled by red flashing LED with inhibiting of transistor output
- Power supply and error indication possible via the DIN rail connector
- LED displays for indicating supply voltage, circuit state, and malfunctions to NAMUR NE 44
- 4-way electrical isolation
- Up to SIL 2 according to EN 61508
- Installation in zone 2 permitted

300 V _{rms} (Rated insulation voltage, surge voltage category II; pollution degree 2, safe isolation as per EN 61010, EN 50178)

Solenoid driver for the intrinsically safe control of Ex i solenoid valves, alarm transmitters or indicators installed in the Ex area.

- Input: logic (low/high signal)
- Output: 48 mA current limitation at 9.5 V, [Ex ia]
- Line fault detection (can be activated/de-activated)
 - Directly via signal channel
 - Or via switching output
- Transparent for test pulses
- Power supply and error indication possible via the DIN rail connector
- LED indicators for supply voltage, status, and fault according to NAMUR NE 44
- Plug-in screw or spring-cage connection technology
- Safe 3-way electrical isolation
- Up to SIL 2 according to EN 61508
- Installation in zone 2 permissible

Notes:

Digital OUT Solenoid driver, Ex i

Current limitation 25 mA

Solenoid drivers for controlling intrinsically safe solenoid valves, alarm transmitters, and indicators installed in Ex areas.

- 20 ... 30 V DC input
- Output [Ex ia]
- Various output characteristic curves compatible with the commercial solenoid valves
- Loop-powered: The required power is supplied via the control signal on the input side.
- Mechanically compatible with DIN rail connector
- Galvanic 2-way isolation
- Up to SIL 3 as per EN 61508
- Installation in zone 2 permitted

Notes:
A list of suitable valves and notes for calculating a valve circuit are available from the download center at www.phoenixcontact.net/products

Accessories

Power and error message module

Power and error message module for feeding the 24 V supply voltage to the DIN rail connectors and signaling line faults and power supply failures.

- One-time or redundant supply, decoupled from diode, protected against polarization
- Supply current up to 3.75 A
- Relay output (PDT) and flashing LED for error messages
- Error message in the event of a power supply failure or fuse fault
- Bus cable fault message for MACX MCR-...(2)NAM... devices connected via DIN rail connectors
- Replaceable fuse
- Installation in zone 2 permissible

ME 6,2 TBUS... T-Connector

DIN rail connector (5-pos.) for bridging the supply voltage of 12.5 mm wide MACX analog Ex modules.

- Reduces wiring costs
- System can be extended or module replaced even while process is active
- Inter-extendable

Description	Supply and error message module , including the relevant DIN rail connector ME 17,5 TBUS 1,5/5-ST-3,81 GN
	Screw connection Spring-cage conn.
DIN rail connector (TBUS) , for bridging the supply voltage, can be snapped onto 35 mm DIN rails as per EN 60715, with UL approval

Termination carrier for MACX Analog Ex-isolating amplifiers

Select standard DIN rail device

Select module carrier

TC... termination carriers are compact solutions for quickly and smoothly connecting DIN rail devices from the MACX Analog Ex series to input/output cards of automation systems using system cables.

The termination carriers combine the advantages of modular DIN rail devices with those offered by plug and play rapid cabling solutions to provide a consistent solution for system technology.

Compact

- Saves up to 30% of space due to compact design

Robust and reliable

- Stable, vibration-resistant aluminum carrier device profile
- PCB is completely decoupled from modules
- PCB without active components
- Redundant supply and monitoring in separate DIN rail module

Easy maintenance

- Use of standard DIN rail devices
- Easy access to connection points
- Quick and safe module connection with plug-in and coded cable sets

Flexible

- Horizontal or vertical DIN rail mounting
- Profile section without pitch markings for I/O cards with specific number of channels
- Can be specifically adapted for I/O cards of various automation systems with different system plug types

Select controller-specific front adapter and system cable

Solutions are also available for MINI Analog, MACX Analog Ex, and Safety

Termination carrier for MACX Analog Ex-isolating amplifiers

The **TC-D37SUB-ADIO16-EX-P-UNI** universal termination carrier is a compact solution which connects isolating amplifiers from the MACX Analog Ex series to analog or binary input/output cards of automation systems.

The **TC-D37SUB-AIO16-EX-PS-UNI** termination carrier design, when combined with the MACX MCR-S-MUX HART multiplexer, also enables communication between HART-capable field devices and a management system.

- Connection of up to 16 single-channel (Ex i)-isolating amplifiers
- Universal 1:1 signal routing to a 37-pos. D-SUB plug-in connector
- For system cables with D-SUB socket and open ends for universal connection
- Redundant supply and monitoring in separate DIN rail module

Notes:
Contact us: specific termination carrier designs for I/O modules of various automation systems are available, planned or can be implemented according to your specifications.

HART multiplexer, 32-channel

TC-D37SUB-ADIO16-EX-P-UNI and TC-D37SUB-AIO16-EX-PS-UNI connection scheme

Multiplexers for HART signals

Multiplexers for HART signals

Multiplexer for digital connection of HART-capable field devices (such as measuring transducers or control valves) to a PC or management system.

- Supports online configuration and diagnostics for the connected HART-capable field devices
- Constant documentation of process variables and states
- 32 HART channels per multiplexer
- Up to 128 HART multiplexers at one PC interface
- Communication via software tool (e.g., HART OPC Server) using RS-485 interface
- Electrical isolation between auxiliary energy, RS-485 bus and the HART channels
- HART field devices are accessed at the same time that the measurement signal is transmitted without affecting measured value processing
- HART field devices connected via universal HART connection boards; direct connection if processing non-Ex signals, with separate Ex i signal isolator connected upstream if processing Ex signals
- Power supplied via HART connection board

Notes:

Description

MCR temperature measuring transducer, for resistance thermometers, thermocouples, resistance-type sensors, and voltage sensors

Ordering data

Type	Order No.	Pcs. / Pkt.
MCR-FL-HT-T-I-EX	2864532	1

Accessories

Configuration software package

The **MCR/PI-CONF-WIN configuration software package** is used to configure and visualize all parameters for the programmable loop-powered temperature transducers.

- For temperature transducers
MCR-FL-T(S)-LP-I-EX and
MCR-FL-HT-T(S)-I-EX
- Galvanically isolated
- Configuration possible during operation
- Straightforward menu interface
- Rapid programming

The computer and the measuring transducer communicate with one another via a software adapter cable and a serial interface.

Notes:
The software runs under the following operating systems:
Windows NT™, 2000™, and XP™.

Description
MCR configuration software , for programming MCR-T-..., MCR-...-LP-..., MCR-...-HT-..., MCR-S-..., MCR-F-..., and MCR-PSP-... modules, CD-ROM

Ordering data		
Type	Order No.	Pcs. / Pkt.
MCR/PI-CONF-WIN	2814799	1

Accessories

USB adapter cable Software adapter cable

For connecting the programmable MCR-/PI modules to the USB interface of a computer, the USB adapter cable **CM-KBL-RS232/USB** can be used together with the relevant adapter cables. Programming with the MCR/PI-CONF-WIN software is possible under the operating systems Windows 98™, Windows 2000™ and Windows XP™.

- The following modules are supported:
- MCR-FL-T-LP-I-EX
 - MCR-FL-HT-T-I-EX

Description
USB adapter cable , D-9-SUB to USB, with adapter D-9-SUB to D-25-SUB
Software adapter cable , 2.4 m length, with USB connection, for programming MCR-...-LP-... and MCR-...-HT-... modules

Monitoring

Energy and power measuring technology

EMpro energy meters measure, analyze, and communicate important electrical system parameters.

PSK DL data logger kits monitor and log operating states.

PSK meters record compressed air consumption.

Current transformers

PACT current transformers convert currents up to 4000 A into secondary currents of 1 and 5 A.

Current and voltage measuring technology

MCR current and voltage transducers convert currents and voltages into standard analog signals.

Solar and PV system monitoring

The SOLARCHECK modular monitoring system is used for string monitoring in photovoltaic systems.

Residual current monitoring

RCM devices provide residual current monitoring in grounded power supply systems. They detect residual currents at an early stage before they result in forced shutdown.

Components for E-Mobility

EV Charge Control is the charging controller used to charge electric vehicles on the AC mains according to IEC 61851-1.

Electronic monitoring relays

EMD monitoring relays detect and indicate deviations in important system parameters at an early stage.

Electronic timer relays

ETD timer relays are used for straightforward time control functions.

Special function modules

EMG special function modules enable simple components such as diodes to be used in an industrial context. These products feature professional housing and connection technology.

Energy costs at a glance

Within industry, energy is viewed as a variable cost factor. As a result, lower energy costs are becoming increasingly important in terms of providing companies with a major competitive advantage in the areas of production, process, and industrial engineering.

Alongside energy consumption, the quality of the energy supplied, the reliability of supply, and effective system utilization also play an important role in ensuring profitability. This calls for continuous measurement and analysis of all sources of energy.

Advantages of energy data acquisition

Continuously recorded energy flow provides the basis for a target-oriented energy management system.

Access comprehensive information regarding the characteristic electrical data of your machinery and benefit from the advantages of this:

- Reduce your energy costs by identifying potential energy savings.
- Optimize your system capacity: through intelligent switching of system parts, uniform network load, and reduced harmonics.
- Reduce peak loads using forward-looking trend calculation and load management.
- Safeguard your production processes and minimize downtimes by continuously monitoring important system parameters.

Measurement – monitoring – communication

Efficient energy management – network-capable EMpro energy meters can be used to acquire and monitor the characteristic electrical data of your machines and systems.

They can be freely extended with communication modules and special function modules, enabling your energy meters to keep pace with your growing requirements. Future-proof planning and investment is therefore ensured.

The communication expert

The EMpro MA600 is capable of performing all measurement tasks associated with power supply applications up to 700 V AC – from straightforward current and power measurement and detection of harmonics to spectral analysis and trend calculation.

- Flexible network connection
- Can be extended with plug-in communication modules and special function modules
- Remote access via web server

The universal solution on the front panel

The EMpro MA400 is capable of all standard measurement tasks in the main distribution up to 500 V AC.

- Plug-in RS-485 extension module for integration in JBUS and MODBUS systems

The compact starter for use in the sub-distribution

The EMpro MA200 energy meter is ideal for simple measurement tasks where on-site analysis of the measured values is sufficient.

The highly communicative device for use on DIN rails

The EMpro MA250 performs simple measuring tasks in small control cabinets directly on the machine.

- With built-in RS-485 interface for integration in JBUS and MODBUS systems

Data logger kits

PSK DL data logger kits monitor the operating state of your plant and inform you of any change in state by SMS.

The complete package is available in two versions:

- PSK DL BASIC with all basic functions
- PSK DL FLEX allows programming directly in SQL and supports modular expansion. Sends e-mails via GPRS or DSL.

Sensors and meters

Use of resources at a glance - determine all relevant states using sensors and meters.

- Detailed procurement measurement, thanks to precise sensor and meter technology
- Intelligent sensor communication, thanks to IO-Link technology

Inline power measurement terminal

The Inline power measurement terminal enables analysis of AC networks.

- For measuring current, voltage, and power, as well as identifying distortion and harmonics

The power measurement terminal can be found in Catalog 8, control technology, I/O systems, and network structure.

Monitoring

Energy and power measuring technology

Energy meters

Measurement – monitoring – communication

In order to achieve efficient energy management, all energy data that has been determined is acquired and analyzed centrally in the control center.

For data transmission, integrate the EMpro measuring devices flexibly into your network structures.

The network components from Phoenix Contact offer interference-free and high-performance communication of energy data, even in harsh industrial environments:

- Copper-based and fiber optic data transmission
- Ethernet and modem communication
- Industrial wireless transmission

Direct access to measured values

Analyze your system parameters quickly on site. At the touch of a button, you can access precisely those measured values that are of relevance.

You can also use the user-friendly web server function to request measured values directly from the control center.

Planning reliability and investment security

EMpro extension modules, special function modules, and communication modules enable you to remain flexible and extend your EMpro measuring devices at any time:

- Digital inputs and outputs
- Pulse outputs
- Analog outputs
- Communication interfaces
- Measured data memory
- Temperature measurement

Remote access to multiple meters - with just one IP address

The web server that has been integrated into the Ethernet communication modules allows you to conveniently configure key parameters online. It also allows remote access to key electrical characteristics such as current, voltage, power, energy, and harmonics.

You can easily select the right device for your application by referring to the table below:

Energy meters

EMpro energy meters are capable of acquiring, monitoring, and displaying all electrical system and machine parameters locally.

EEM-MA600

- Can be extended with special function and communication modules
- Remote access via web server, integrated into Ethernet communication module
- Acquisition of individual harmonic components up to 63rd order
- Trend calculation for active and reactive power

EEM-MA400

- Can be extended with a pulse module
- Can be extended with RS-485 communication module (JBUS/MODBUS)
- Acquisition of total harmonic content up to harmonic of 51st order

EEM-MA250

- Two-tariff measurement via pulse input
- Pulse output
- RS-485 interface (JBUS/MODBUS)

EEM-MA200

- Two-tariff measurement via pulse input
- Pulse output

Complete packages for data logging

BASIC data logger kit

Optimize your use of energy and resources. Data loggers from Phoenix Contact can be used to monitor and log the supply of water, compressed air, and electricity to your system. This enables efficient cost control. No additional software or operator panels are needed to parameterize data loggers – simply use a web browser on your PC.

The BASIC data logger kit features:

- Low installation and energy costs, thanks to parameterization via web interface without programming knowledge
- Comprehensive solution – complete package available under one order number
- Flexible communication, thanks to the integrated GSM/GPRS modem and Ethernet interface
- Maximum system availability, thanks to limit value monitoring
- Standardized data routing, thanks to SQL interface
- Process information sent to the user via e-mail or SMS
- Set digital outputs on the data logger via SMS
- Integrated FTP and web server

Description
Parameterizable data logger kit with Ethernet interface and GSM modem, including power supply unit with 8 digital outputs and 16 digital inputs, plus accessories and patch cable

FLEX data logger kit

The PSK DL FLEX data logger kit is the extended version of the PSK DL BASIC basic package. A maximum of three digital input terminals and four analog input terminals from the Inline I/O system can also be connected to the FLEX kit. The mounted terminals are automatically detected and started up. The PSK DL FLEX can be used to send digital and analog status information via SMS or e-mail or via mobile phone networks or Ethernet. In addition, the PSK DL FLEX can write the information directly to an SQL database that is provided.

In addition to all the properties of the BASIC version, the FLEX extended solution kit also offers the following:

- Direct SQL connection via SQL interface
- Process information via e-mail and SMS
- Flexible extension with additional I/O modules

Description
Extendable parameterizable data logger kit with Ethernet interface and GSM/GPRS modem, including power supply unit with 8 digital outputs, 24 digital inputs, and 8 analog inputs, plus accessories and patch cable

Inline digital input terminal, complete with accessories (connector and labeling field)
- 2 inputs
- 4 inputs
- 8 inputs
- 16 inputs
- S0 counter

Inline analog input terminal, complete with accessories (connector and labeling field)
- 2 inputs
- 8 inputs
- 8 inputs, initiator with supply outputs

Sensors and meters

Compressed air meters

Use meters from Phoenix Contact to monitor the use of compressed air, an expensive production resource. By using compressed air efficiently, you can decrease compressor usage and therefore reduce energy costs. The calorimetric measuring procedure records even the smallest consumption rates. You can therefore detect wear or leaks based on the amount of air consumed.

Use compressed air meters to acquire the following values:

- The current volumetric flow according to ISO 2533 and DIN 1343
- The total volume used
- The temperature of the compressed air in the monitored operating processes

The compressed air meters impress thanks to their:

- Detailed reference measurement with flow rate, total volume, and temperature display
- Intelligent sensor communication, thanks to IO-Link technology
- Measuring range from 0.06 Nm³/h to 700.0 Nm³/h
- Flexible use, thanks to IP65 protection: resistant to dust and splash water

IO-Link

Compressed air counter up to 75 Nm³/h

Flow monitoring	
Measuring range	0 Nm ³ /h ... 75 Nm ³ /h

Extremely versatile

PACT current transformers offer a complete product range for converting alternating currents up to 4000 A into secondary currents of 1 A and 5 A. Depending on requirements, bus-bar, plug-in, and winding current transformers are available. PACT current transformers are available in different transformation ratios, accuracy classes, and rated powers - in 3000 versions, for your current measurement requirements.

Also available for higher accuracy classes

For standard applications, such as in machine building or system manufacturing, Phoenix Contact offers current transformers with accuracy classes 0.5 and 1 in a version that cannot be calibrated.

For higher accuracy or for billing purposes in energy supply, type-tested transformers that can be calibrated as well as calibrated transformers are available - with classes 0.2/0.2S/0.5 and 0.5S.

Fast and secure installation

The current transformer quick-action mechanism offers the following advantages:

- Tool-free mounting
- Considerable reduction in installation time
- Easy handling and secure fastening by pressing with finger
- Current transformers align themselves – no need for subsequent alignment

Variable and space-saving mounting

In addition to the vertical and horizontal mounting position, the optional accessories offer further installation options such as mounting on the DIN rail or on the control cabinet panel.

All PACT current transformers are just 30 mm wide. This saves space – for example flat mounting when measuring branch outlets.

Safe detection of current peaks

PACT current transformers can be used to safely detect current peaks greater than the rated nominal current strength – without resulting in any damage: the transformers are designed for a continuous thermal nominal current that is 120% of the primary rated current strength.

Example: a PACT transformer with a specified rated power of 10 VA does indeed deliver 14.4 VA on a continual basis.

Safe isolation

PACT current transformers are manufactured in accordance with EN 50178. This is relevant for electronic equipment for use in power installations.

EN 50178 differs considerably from EN 60044, the usual standard for transformers, with regard to safety.

Your advantages:

- PACT current transformers offer safe isolation, thanks to greater air and creepage distances
- PACT current transformers ensure that there is no sparkover on the secondary side of the transformer and human life is protected inside and outside the control cabinet
- Up to 1000 V (L-N) operating voltage possible
- Routine testing with 12 kV (1.2/50 μ s)
- Surge voltage category 3 is met

Monitoring

Current transformers

Selection guide

- Complete range consisting of winding, bus-bar, and plug-in current transformers
- Popular types available from stock; alternatively, order key can be used for custom dimensioning
- Versions available to support official calibration

Selection

- Select your converter in accordance with the dimensions of the copper rail
- Specify the four electrical characteristics of the converter:

- 1. The primary rated current strength I_{pn}** - the maximum amperage occurring in the path to be measured
- 2. The secondary rated current I_{sn}** - supplied to the downstream measuring devices
- 3. Class** - accuracy for adherence to the specified tolerances
- 4. Rated power S_n [VA]** - takes account of all the loads occurring in the measuring circuit

Input data

Thermal rated short-time current
 Rated surge current
 Rated frequency
 Surge current limitation factor

General data

Rated insulation voltage
 Test voltage
 Impulse withstand voltage
 Insulating material class
 Connection capacity of secondary terminals
 Ambient temperature (operation)
 Standards/regulations
 Housing material

Technical data

$I_{th} = 60 \cdot I_n$
 $I_{dyn} = 2.5 \cdot I_{th}$
 50 Hz ... 60 Hz
 FS 5

1 kV
 3 kV (50 Hz, 1 min.)
 12 kV (1.2 / 50 μs)
 E
 2 x (2,5 x 4) mm
 -25°C ... 40°C
 IEC 60044-1, EN 50178
 Polyamide PA fiberglass reinforced

Calculation guide

Determination of the secondary side rated power S_n

- All the occurring loads must be added:
- Calculate the power requirement of the copper cable (forward and return line)
 - Take into account the power requirement of the connected devices (measuring devices)
 - Add a reserve requirement

$$S_n \text{ total} = S_n \text{ copper cable} + S_n \text{ measuring device} + S_n \text{ reserve}$$

Power requirement of copper cables with a different diameter

Conductor cross section in mm ²	Rated power in VA/m (consider the forward and return line)	
	Secondary current I_{sn} 5 A	Secondary current I_{sn} 1 A
1.5	0.2917	0.0117
2.5	0.1750	0.0070
4	0.1094	0.0044
6	0.0729	0.0029

Example:
 S_n copper cable = cable length x 2 x rated power
 S_n copper cable = 10 m x 2 x 0.1750 VA/m = 3.50 VA

S_n measuring device = 2 VA

S_n reserve < 0.5 x (S_n copper cable + S_n measuring device)
 S_n reserve = 2 VA

S_n total = S_n copper cable + S_n measuring device + S_n reserve
 S_n total = 3.5 VA + 2 VA + 2 VA = 7.5 VA

Order key - example for PACT MCR-V2-3015-60

Quick-action mechanism for PACT current transformers

- No tools necessary for mounting
- Extremely easy handling, thanks to secure fastening by pressing with finger
- Set consisting of two fixing pins and a holding latch

Notes:

The 16 mm wide quick-action mechanism can also be used for larger current transformers if the length of the fixing pins is sufficient.

for: ...V2-4012-70..., ...V2-5012-85...

for: ...V2-3015-60..., ...V2-6015-85..., ...V2-6315-95...

With flexible power supply – current transducers up to 12 A AC

Active current transducers convert sinusoidal alternating currents up to 12 A. The integrated wide-range power supply unit enables use in various different countries.

With hinged Rogowski sensor – current transducers up to 200 A AC

The AC current transducers measure sinusoidal and non-sinusoidal alternating currents up to 200 A. The hinged Rogowski sensor ensures very easy installation, as cables that are to be measured do not have to be isolated. This enables mounting to be carried out without interruptions.

Limit value monitoring with the current protector

At the current protector, a desired amperage is specified at which a PDT contact switches a load on or off.

Flexible signal conditioning – current transducers up to 55 A AC/DC

Current transducers up to 55 A offer an infinitely adjustable measuring range. This range is mapped over the entire output signal range. This ensures extremely accurate resolution of measured values. Basic configuration can be performed quickly via the DIP switches. Additional useful device functions can be set via the software.

For high currents – current transducers up to 600 A AC/DC

The universal current transducers are the ideal solution for measuring high currents with any waveform up to 600 A AC/DC. The product range offers various different devices in graded measuring ranges with current or voltage output.

Voltage transducers, AC and DC

Voltage transducers convert AC and DC voltages into standard analog signals.

For sinusoidal alternating currents up to 12 A

- 3-way electrical isolation
- Wide-range version from 19.2 ... 253 V AC/DC
- Voltage bridging with DIN rail connector
- Input/output can be configured via DIP switches
- Suitable for potentially explosive areas, thanks to ATEX approval for Ex zone 2

For sinusoidal and non-sinusoidal alternating currents up to 200 A

- Distorted alternating currents up to 6000 Hz can be also acquired, thanks to true r.m.s. value measurement (RMS)
- Uninterrupted installation and lossless current measurement thanks to hinged Rogowski sensor
- Measuring range selection with slide switch

Limit value monitoring

The current protector converts sinusoidal alternating currents to binary switching signals.

- Switching point can be freely selected in the measuring range of 0 ... 16 A AC
- Changeover relay output
- Adjustable switch hysteresis
- 3-way isolation
- Settable operating current/quiescent current behavior

With flexible measuring ranges for all waveforms up to 55 A

- Lossless true r.m.s. value measurement without shunt via Hall sensor (TRMS)
- Optimum mapping of the measuring range up to 55 A, thanks to software-programmable upper and lower limits
- Limit value alarm in the event of threshold value overrange or underrange up to 55 A
 - via relay or transistor output

For high currents – current transducers up to 600 A AC/DC

- Lossless true r.m.s. value measurement without shunt via Hall sensor (TRMS)
- Compact dimensions also enable distributed use
- Variable mounting on DIN rail and mounting plate
- COMBICON plug-in connection terminal blocks
- 3-way isolation
- For a conductor diameter of up to 32 mm

Voltage transducers, AC and DC

- For DC voltages from 0 ... ± 660 V DC and AC voltages from 0 ... 444 V AC
- Bidirectional output signals
- Adjustable voltage ranges
- ZERO/SPAN adjustment $\pm 20\%$
- 3-way isolation

Current acquisition

If purely ohmic loads (incandescent lamps, heaters, etc.) are operated on a conventional 230 V network, no distortions are produced on the power grid.

As non-linear loads increase as a result of phase angle-controlled regulation modules, pure sinusoidal waves gradually take on a trapezoidal waveform.

The majority of current and voltage transducers are calibrated for sinusoidal alternating currents, which means that they can only indicate the r.m.s. value of an alternating current by mean-value generation.

True r.m.s. measuring transducers do not rely on specific form factors and accept all waveforms.

r.m.s. value acquisition according to the transformer principle (RMS)

According to Faraday's law of induction, a magnetic flux which changes over time produces an induced voltage at the terminals of a coil. A circuit arrangement consisting of two electrically isolated but magnetically coupled circuits is known as a transformer. This is one of the simplest and most commonly used methods of current transfer.

Mean-value generation

r.m.s. value (root mean square value)

The r.m.s. value of an alternating current corresponds to the steady-state value that results from the instantaneous values of this current. This steady-state value generates the same thermal work in an ohmic resistor as a direct current of identical magnitude.

The term "true r.m.s. value" simply means that distorted, direct, and pulsating currents can be acquired. Here, the measuring transducer is compatible with any waveform.

For a sinusoidal AC current this means:

$$I_{\text{rms}} = \frac{I_s}{\sqrt{2}} \quad U_r = \frac{U_s}{\sqrt{2}}$$

True r.m.s. value acquisition according to the Rogowski principle (TRMS)

The Rogowski measuring principle is used to measure sinusoidal and non-sinusoidal alternating currents. A non-ferrous induction coil (air-core coil), known as the Rogowski coil, measures the magnetic voltage along a closed circumference around a live conductor.

The output signal of the Rogowski coil is then conditioned so as to obtain an exact replica of the primary current.

True r.m.s. value acquisition with a Hall sensor (TRMS)

The magnetic flux generated by the primary current I_p is condensed in the magnetic circuit and measured in the air gap using a Hall sensor. The output signal of the Hall sensor is then conditioned so as to obtain an exact replica of the primary current.

Arithmetic average value

The arithmetic average value is used to measure direct currents or filter a DC component out from a pulsating current. Applying the arithmetic average value to a symmetrical alternating current would result in a measured value of "0".

The arithmetic average value enables direct currents to be made available at the output in the form of standard analog signals. The polarity can be evaluated by means of a bipolar output signal.

For a 230 V/50 Hz power grid, this results in the following with regard to the voltage levels:

$$U_{\text{rms}} = 230 \text{ V}$$

$$U_s = 325 \text{ V}$$

$$U_{\text{avg}} = 0 \text{ V}$$

r.m.s. value acquisition according to the transformer principle (RMS)

True r.m.s. value acquisition according to the Rogowski principle (TRMS)

True r.m.s. value acquisition with a Hall sensor (TRMS)

Arithmetic average value

AC/DC current transducers and distorted currents

The **MCR-SL-CUC-...** current transducers measure DC, AC, and distorted currents of 0 ... 600 A.

- Universal current measurement, no shunt required
- Compact dimensions also enable distributed use
- Variable mounting on DIN rail and mounting plate
- Simple connection method thanks to COMBICON plug-in connection terminal blocks
- 3-way isolation

For DC, AC, and distorted currents of 0 ... 300 A, voltage output

For DC, AC, and distorted currents of 0 ... 600 A, current output

Housing width 90 mm

Current and voltage measuring technology

AC/DC current transducers and distorted currents

The **MCR-S...-UI(-SW)-DCI** current transducers measure direct, alternating and distorted currents.

- Device can be set via DIP switches or MCR/PI-CONF-WIN configuration software
- True r.m.s. value measurement
- 3-way isolation
- With optional relay and transistor output

For DC, AC, and distorted currents
0 ... 11 A

For DC, AC, and distorted currents
0 ... 55 A

AC current transducers, sinusoidal and distorted

The **MCR-SL-S-...00-...** current transducers measure sinusoidal and non-sinusoidal alternating currents within the range 0 ... 200 A.

- True/r.m.s. value measurement from 30...6000 Hz
- Measuring range selection with slide switch
- Loop-powered
- Can be retrofitted with the open-up Rogowski coil

For sinusoidal and non-sinusoidal alternating currents, 0 ... 200 A, voltage output

Ex: Housing width 55 mm

Technical data

Input data	...
Input current (configurable)	0 A ... 100 A (0...50/75/100 A)
Operate threshold	1% (of final value)
Frequency range	30 Hz ... 6000 Hz
Curve type	Sinusoidal and non-sinusoidal
Overload capacity	Depending on laid conductor
Surge strength	Depending on through connected conductor
Connection method	Clamp-on cable design, diameter 18.5 mm
Output data	0 ... 5 V / 0 ... 10 V
Output signal	((0 V ... 10 V) 14 V, (0 V ... 5 V) 7 V)
Maximum output signal	≥ 10 kΩ
Load R _B	
General data	
Supply voltage U _B	20 V DC ... 30 V DC
Current consumption	< 30 mA
Maximum transmission error	< 1% (of final value)
Cable position error	< 0.63%
Temperature coefficient	< 0.035%/K
Step response (10 - 90%)	< 340 ms
Safe isolation	As per IEC 61010-1 and IEC 61326
Rated insulation voltage	300 V AC (to ground)
Surge voltage category / pollution degree	III / 2
Test voltage input/output	5 kV (50 Hz, 1 min.)
Degree of protection	IP20
Ambient temperature range	-20°C ... 60°C
Dimensions W / H / D	55 / 85 / 70.5 mm
Screw connection solid / stranded / AWG	0.2 ... 2.5 mm ² / 0.2 ... 2.5 mm ² / 24 - 14

AC current protectors, sinusoidal

Notes:
1) EMC: Class A product, see page 571

The **MCR-SL-S-16-SP-24** current protector converts sinusoidal 50 Hz/60 Hz alternating currents into binary switching signals.

- Switching point can be freely selected in the measuring range of 0...16 A AC
- Changeover relay output
- Adjustable switch hysteresis
- 3-way isolation
- Settable operating current/quiescent current behavior

For sinusoidal alternating currents, 0 ... 16 A AC

Housing width 22.5 mm

Utilize solar electricity efficiently

Detect errors – increase efficiency: photovoltaic systems should achieve maximum energy yield within the shortest possible time.

SOLARCHECK provides reliable information regarding the performance of your photovoltaic system. It can be used to detect faults, which may be caused by damaged panels, defective contacts or damage in the cabling. This allows you to implement countermeasures quickly, thereby increasing the efficiency of your system.

Current topic: reliable monitoring

Whether a small roof-top system on a family home or a megawatt outdoor system: for reliable operation, the photovoltaic market requires monitoring systems where status information is continuously available and visualization is easy. Phoenix Contact offers a comprehensive portfolio of hardware and software products specifically designed for this purpose.

Energy of the future

From installation to monitoring - in the "Components and systems for photovoltaics" brochure you will find further innovative solutions for your photovoltaic system, such as:

- Connection technology
- Surge protection
- Hardware and software solutions
- Generator connection boxes
- Tools and marking

Easy integration in monitoring systems

The modular Solarcheck monitoring system consists of various measuring modules for current and voltage measurement and an associated communication module.

The communication module collects the measured values from the current measuring modules and forwards them to a higher-level controller. You can acquire up to eight or four string currents with one current measuring module each. A maximum of eight current measuring modules of any type can be connected to one communication module. The 2-conductor communication cable is also used to supply the measuring modules with power. This means that no additional power supply unit is required in the field.

The voltage measuring module is usually connected to and also supplied via the analog input provided on the 8-channel current measuring modules.

Contact-free current measurement

Contact-free measurement using Hall sensors offers many advantages:

- Safe isolation is already ensured by the cable insulation.
- No contact resistance due to additional contact points.
- The current is forwarded safely as the line circuit is not directly accessed.

Space-saving installation without an additional power supply unit

With a width of just 22.5 mm, the narrow measuring module bundles the cables in a confined space.

- The 2-conductor communication cable is also used to supply the measuring modules.
- This means that one communication module supplies up to eight measuring modules – without an additional power supply unit.

Flexible expansion

Optional extension of voltage measurement up to 1500 V DC.

- Also suitable for grounded systems.
- Suitable for PV systems with extra high system voltages.
- Flexible use, even outside the Solarcheck system.

Monitoring

Solar and PV system monitoring

PV string monitoring Solarcheck

The modular Solarcheck monitoring system consists of various devices for current and voltage measurement and an associated communication module.

Communication module:

- For connecting and collecting measured values from up to eight measuring modules
- Provision of data for transfer to higher-level controllers

Current measuring modules:

- 8-channel current measurement up to 20 A DC
- Detection of reverse currents up to -1 A
- 4-channel extension modules for 20 A DC
- Internal temperature monitoring
- Digital input for monitoring, e.g., the remote indication contacts of surge protection modules
- Supply via the communication module

Voltage measuring module

- Voltage measurement up to 1500 V DC in any grounded PV system
- Connection and supply is usually via the analog input provided (0 ... 10 V) on the 8-channel Solarcheck current measuring module
- Output of the voltage measured value as a 2 ... 10 V analog signal
- As an option, can also be removed from the Solarcheck group and used separately

Notes:
1) EMC: Class A product, see page 571

Monitoring

Residual current monitoring

Detect errors before they actually occur

RCM devices provide residual current monitoring in grounded power supply systems. They detect residual currents at an early stage, such as those that occur as a result of insulation errors. They can therefore be used to prevent forced system shutdown. Plans can be made to remove errors outside of operating hours. RCM devices also act as a form of fire prevention.

Increasing use is being made of equipment such as frequency inverters. In the event of an error, residual currents with a frequency of up to 50 kHz can be generated. Type B+ RCM devices from Phoenix Contact are already able to detect residual currents with frequencies up to 100 kHz. This far exceeds present-day requirements of 20 kHz for type B+ devices.

	Single-phase	Single-phase with smoothing	Three-phase star circuit
Circuit			
Correct load current			
Residual current to ground potential			
Solution	Type A	-	-
	Type B	Type B	Type B

Residual currents can increase continually due to gradual processes. This can be attributed to humidity or conductive dirt on live parts, for example. Residual current circuit breakers trip at different rated residual currents $I_{\Delta n}$, depending on their type. Additionally installed residual current monitoring devices prevent sudden system downtimes thanks to early warnings. The continuous supply of information about gradually increasing residual currents allows timely intervention. Unplanned system failures can be avoided.

EV Charge Control charging controller

EV Charge Control is the charging controller used to charge electric vehicles on the AC mains according to IEC 61851-1.

The control and monitoring functions that are defined here for charging mode 3 serve as the basis for the equipment.

- Control Pilot evaluation and control
- Monitoring of the PE protective ground connection
- Evaluation of the proximity
- Control of the charge contactor and locking actuators

Plug-in charging systems

For information on plug-in charging systems, see Catalog 2, connection technology for field devices.

Additional functions:

All necessary control functions are integrated in a single device. No additional controller is required.

- Easy configuration directly at the device or via the integrated web server
- Adjustable charging current limitation of 6 ... 80 A
- Parameterizable automatic rejection of charging cables with low current carrying capacity
- Automatic or manual locking as well as selection of DC motor or magnetic locking actuators
- Optional locking confirmation and external enabling as a switching requirement
- Integration into your charging infrastructure via Ethernet interface (Modbus/TCP)
- Charging process enabling, status requests, and dynamic load management via remote access
- 4 digital inputs and 4 digital outputs
- Two digital outputs configurable via web server
- 4 relay outputs

EV Charge Control charging controller

EV Charge Control

- Charging controller for charging electric vehicles on AC mains according to IEC 61851-1.

EV Charge Lock Release

- Optional extension module for plug release in the event of mains failure.

Notes:

For information on plug-in charging systems, see Catalog 2, connection technology for field devices.

For high system availability

EMD monitoring relays can be used to detect deviations in important system parameters at an early stage. These can be indicated or system parts can be shut down selectively. EMD monitoring relays ensure error-free and cost-effective operation of your system. They are an inexpensive solution for numerous monitoring functions.

- Surge voltage and undervoltage
- Overcurrent and undercurrent
- Phase failure, phase sequence, and phase asymmetry
- Power factor and real power
- Motor winding temperature
- Levels

For system monitoring, choose from two product ranges: compact or multifunctional monitoring relays.

Perfect timing

ETD timer relays ensure optimum time sequences.

The modules are the cost-effective alternative to a PLC: with easy configuration and fast wiring.

Choose from two product ranges for your ideal time control application:

- Ultra-narrow timer relays each with one time range and one function
- Multifunctional timer relays with selectable time ranges and functions

Professionally packaged components

Special function modules with professional housing and connection technology can be used to integrate electronic components in your system. They can be used to perform a variety of tasks:

- Diode modules provide protection against polarity reversal. In addition, they decouple messages in fault reporting systems.
- Lamp testing modules decouple signals in isolation in the field of fault reporting technology.
- Display modules simplify troubleshooting and provide help for monitoring processes.

Compact monitoring relays

- Ideal for simple monitoring tasks – from series production to building installation.
- Compact installation housing
 - Quick and tool-free wiring with push-in technology
 - Parameters can be adjusted easily using rotary switches
 - Clear diagnostics, thanks to color status LED

Multifunctional monitoring relays

- Parameters can be adjusted easily using rotary switches
- Fast error detection, thanks to fine tuning and short response times
- Worldwide use, thanks to wide-range power supply unit or plug-in transformer
- Space saving – with two PDT outputs in 22.5 mm wide housing
- Electrically isolated measuring and supply circuits
- Clear diagnostics, thanks to color status LEDs

Ultra-narrow timer relays

- The space-saving and inexpensive solution for simple time control applications.
- Each with one time range and one function
 - Design width of just 6.2 mm - saves up to 70% space compared to conventional timer relays
 - Precise time setting using the illuminated thumbwheel
 - Fast wiring through the use of plug-in bridges

Multifunctional timer relays

- For universal use thanks to wide range of functions.
- Just three versions for all conventional time control applications.
 - Two floating PDT outputs on a design width of just 22.5 mm
 - Supply voltage via wide-range power supply unit
 - Optimum setting of times ranging from milliseconds to several days

Special function modules

- Special function modules transform components such as diodes into a shock-proof and dust-proof electronics module.
- Easy installation, thanks to electronics housing with IP20 protection that can be installed in a control cabinet
 - Fast mounting on DIN rails, thanks to the foot catch
 - User-friendly wiring, thanks to practical connection technology

Monitoring

Monitoring relays, timer relays, special function modules

Single-phase current and voltage monitoring

Single-phase current monitoring

- The **EMD-BL-C-10** monitors AC currents from 0 ... 10 A.
- Adjustable response delay
 - 0 ... 5 A or 0 ... 10 A measuring range
 - Adjustable via rotary switch on the front

Single-phase voltage monitoring

- The **EMD-BL-V-230** monitors DC and AC voltages.
- 24 V AC/DC or 230 V AC
 - Separately adjustable response delay
 - Adjustable monitoring range
 - Adjustable via potentiometer on the front

Monitoring

Monitoring relays, timer relays, special function modules

Effective power monitoring, load monitoring (cos φ)

Effective power monitoring

The effective power in single- and 3-phase networks can be monitored with the **EMD-FL-RP-480** effective power monitoring relay.

- Monitoring range up to 7.2 kW
- Separately adjustable startup and release delays
- Temperature monitoring of the motor winding
- Variable supply voltage range
- Detection of switched off loads

Load monitoring (cos φ)

The **EMD-FL-PF-400** monitoring relay is a cos φ monitor for load monitoring in single- or three-phase networks.

Notes:

- 1) EMC: Class A product, see page 571

Temperature monitoring, filling level monitoring

Temperature monitoring (motor winding)

The monitoring relay **EMD-SL-PTC** monitors the motor winding temperatures by means of PTC (PTC thermistor resistance) as per DIN 44081.

- Test function with integrated test/reset button
- Variable supply voltage range
- Short-circuit and open-circuit monitoring

Filling level monitoring

The **EMD-SL-LL-...** monitoring relay monitors the level of electrically conductive liquids with the help of conductive probes (not supplied as standard).

- Adjustable response delay
- Adjustable via potentiometer on front

Temperature monitoring (motor windings)

Filling level monitoring

Housing width 22.5 mm

Monitoring

Monitoring relays, timer relays, special function modules

Multifunctional timer relays

The full range of conventional applications can be accommodated by the three versions of the **ETD** multifunctional timer relay.

- Suitable for universal use thanks to varied functions and selectable time ranges
- Time ranges from a few milliseconds to several days
- Variable supply voltage range
- 2 floating PDT outputs

Notes:
1) EMC: Class A product, see page 571

**Multifunctional timer relay,
two adjustable times**

Housing width 22.5 mm

Monitoring

Monitoring relays, timer relays, special function modules

Diode modules

Diode circuits perform various tasks in electrical control systems, particularly in electronic ones:

- Electrical decoupling of messages in fault signaling systems
- Spark-suppression diodes for limiting surge voltages of inductive loads, (solenoid valves, DC relays or similar)
- Can be supplied as “diode gates” combined with anode or cathode or as freely assignable diodes

with diode type 1 N 4007

with diode type 1 N 5408

Relay modules

The importance of the reliability of industrial automation equipment is growing with the increase in use of electronic modules.

Modern relay or solid-state relay interfaces perform a wide range of tasks. Whether in production engineering, for the electrical equipment of machines or in control engineering for energy distribution, building automation and materials processing – the main aim is to guarantee the exchange of signals between the process peripherals and the superior, central control systems. This exchange must provide reliable operation, be floating and electrically unambiguous.

Safe electrical interface modules that meet the requirements of modern system concepts must include the following features:

- Coupling of different signal levels
- Safe electrical isolation between input and output
- High interference insensitivity.

In practice, a relay interface comes into use with a flexible interface configuration with a large switching capacity range and the possibility of combining different types of contact. Further important features of relay interfaces are:

- Electrical isolation between open contacts
- Switching of independent switching current types
- High short-term overload resistance in the event of a short circuit or voltage peaks
- Practically impervious to electromagnetic fields
- Easy handling.

Solid-state relay modules are used when an interface between the process peripherals and electronics is subject to the following requirements:

- Low control power
- High switching frequencies
- Wear-free switching with no contact bounce
- Resistance to vibration and impacts
- Long service life.

Basics of relay technology

General

Electromechanical relays are used as interface modules between the process I/O devices, on the one hand, and the open-loop/closed-loop control and signaling equipment, on the other, for level and power adjustment purposes.

Essentially, electromechanical relays can be divided into two main groups: monostable and bistable relays.

With monostable DC or AC relays, the contacts automatically return to the release state as soon as they are de-energized.

In the case of bistable relays, the contacts remain in their present switch position when the excitation current is switched off.

Coil side

Input circuits and voltage types

There are various kinds of input circuit depending on the type of relay used and the nature of the control voltage.

If pure AC relays are used (AC input), the input circuit is generally nothing more than a visual switching status indicator.

Unless otherwise specified, the frequency of the control voltage is 50/60 Hz.

Basic construction of a relay with AC input

In the case of a pure DC input, the most important addition to the circuit is a freewheeling diode. This limits the voltages induced on the coil on circuit interruption to a value of approximately 0.7 V, which does not pose a danger to any connected control electronics.

As the freewheeling diode can only perform its required function if the polarity of the voltage connection is correct, a reverse polarity protection diode is also integrated into the input circuit.

Basic construction of a relay with DC input

To allow DC or AC voltage operation, a bridge rectifier is connected in the input circuit. The diodes are simultaneously responsible for performing rectification, freewheeling, and polarity reversal protection functions. The interrupting voltage of the coil is limited to approximately 1.4 V.

To protect the input circuit against overvoltages, a varistor is also connected (depending on the type) upstream of the bridge rectifier.

Basic construction of a relay with AC/DC input

Bistable remanence relays with a double winding are only ever operated with DC voltage.

With these types of relay, there are three coil connections on the coil side. In addition to the common connection, there are separate connections for “setting” and “resetting”; these are controlled by short pulses only. As a result, the relays hardly heat up at all. Simultaneous control of both control inputs is not permitted.

A distinction is made between negative switching (M) and positive switching (P) types, depending on the polarity of the freewheeling and reverse polarity protection diodes.

Block diagram of a bistable relay, negative switching type

Block diagram of bistable relay, positive switching type

Operating voltage range

The ambient temperature prevailing at the location of use has a major impact on certain relay operating parameters.

As the ambient temperature increases, the coil winding heats up, causing the operate and release voltages to rise. At the same time, the maximum permissible coil voltage decreases, which means that the usable

working range becomes restricted as a result.

The diagram below illustrates how the operating voltage behaves as a function of the ambient temperature.

Basic curve of a relay operating voltage

- I: Maximum permissible voltage with 100% operating time (OT) and assuming compliance with the coil temperature limit
- II: Minimum operate voltage

Interference voltages and interference currents on the coil side

When inductive or capacitive interference voltages are coupled into the long supply lines of a relay, this can prevent the relay from operating safely.

If the coupled-in voltage exceeds the release voltage required by the IEC 61810-1 “relay standard”, in extreme cases the relay may fail to release. In the case of DC relays, this release voltage is $\geq 0.05 \times U_N$ and for purely AC relays, it is $\geq 0.15 \times U_N$.

The same disturbances can occur when a relay with a low input power is controlled by an electronics module with an AC voltage output featuring an RC circuit. The typical leakage current from RC elements of this kind (generally in the region of several mA) provides sufficient control power to prevent the downstream relay from releasing or even enough power to excite it.

The disturbance level of any interference voltages that are present can be reduced by connecting an RC element parallel to the relay coil. This measure also subjects the interference voltage to a capacitive load, causing it to collapse.

External RC interference suppression filter to prevent interference voltage coupling

The following values are recommended for the purpose of dimensioning the RC element:

- R = 100 ... 220 Ω
- C = 220 ... 470 nF

The SO46 series have been developed to provide even higher levels of immunity to interference. These products already contain an integrated RCZ filter. See, for example, PLC...SO46.

Contact side, contact materials

Given the wide variety of potential applications in the different industrial sectors, the relays used must be matched to the various tasks that need to be performed by selecting the right kind of contact material.

The voltage, current, and power values play an important role when determining the suitability of contact materials. Other criteria include:

- Contact resistance
- Erosion resistance
- Material migration
- Welding tendency
- Chemical influences

In this way, the various contact materials (generally noble metal alloys) can be matched to the relevant areas of application.

The adjacent table provides details of some of the key materials.

Contact material	Typ. properties	Typ. applications	Guide values for the area of application*
Gold Au	Largely insensitive to industrial atmospheres; low and constant contact resistances in the range of small switching capacities with nickel (AuNi) or silver (AuAg) alloys	Dry measuring and switching circuits, control inputs	μA ... 0.2 A μV ... 30 V
Silver Ag	High electrical conductivity; sensitive to sulfur, therefore often gold-flashed (approximately 0.2 μm) as protection; nickel (AgNi) or copper (AgCu) alloys increase the mechanical resistance and erosion resistance and reduce the welding tendency.	Universal; suitable for medium loads; nickel alloys (AgNi 0.15) for DC circuits with medium to large loads.	≥ 12 V ≥ 10 mA
Silver, hard gold-plated Ag+Au	Properties similar to gold Au. When switching loads > 30 V/0.2 A, the hard gold plating (5 - 10 μm) is destroyed and the values and properties of the Ag contact are applicable. However, a reduction in the service life is then to be expected.	Suitable for control inputs and other small loads.	≥ 100 mV ≥ 1 mA
Tungsten W	Highest melting point; very high erosion resistance; greater contact resistances; very low welding tendency; susceptible to corrosion; often used as lead contact.	Loads with very high inrush currents, e.g., glow lamps, fluorescent lamps.	≥ 60 V ≥ 1 A
Silver nickel AgNi	High erosion resistance; low welding tendency; higher contact resistances than with pure silver.	Universal; suitable for medium to high loads; DC circuits and inductive loads.	≥ 12 V ≥ 10 mA
Silver nickel AgNi+Au	Properties similar to gold Au. When switching loads > 30 V/0.2 A, the hard gold plating (5 - 10 μm) is destroyed and the values and properties of the AgNi contact are applicable. However, a reduction in the service life is then to be expected.	Suitable for control inputs and other small loads.	≥ 100 mV ≥ 1 mA
Silver tin oxide AgSnO	Low welding tendency; very high erosion resistance for high switching capacities; low material migration	Application depends heavily on the relay type; switching circuits with high make and break loads, e.g., glow lamps and fluorescent lamps, AC and DC circuits. Due to different alloys and production procedures, partly also suitable for smaller loads.	≥ 12 V ≥ 100 mA (≥ 10 mA)
Silver tin oxide, hard gold-plated AgSnO+Au	Properties similar to gold Au. When switching loads > 30 V/0.2 A, the hard gold plating (5 - 10 μm) is destroyed and the values and properties of the AgSnO contact are applicable. However, a reduction in the service life is then to be expected.	Suitable for control inputs and other small loads.	≥ 100 mV ≥ 1 mA

* Values depend on the relay used and on further operating conditions.

Contact protection circuit

Every electrical load constitutes a mixed load with ohmic, capacitive, and inductive components.

When these loads are switched, the switching contact is in turn subjected to a load, to either a lesser or greater extent. This load can be reduced by including a suitable contact protection circuit.

In view of the fact that loads with a large inductive component are predominantly used in practice (e.g., contactors, solenoid valves, motors, etc.), these application scenarios are worth considering in more detail.

On interruption, voltage peaks with values of up to several thousand volts occur due to the energy stored in the coil.

These high voltages cause an arc on the switching contact which can destroy the contact due to material vaporization and material migration. The electrical service life is reduced considerably as a result. In extreme cases, the relay may fail in the very first cycle with DC voltage and a static arc.

A protective circuit must be used to suppress the formation of an arc. With optimum dimensioning, almost the same number of cycles can be achieved as with an ohmic load.

Basics of relay technology

In principle, there are a number of possible ways of achieving an effective circuit:

1. Contact wiring
2. Load wiring
3. Combination of both wiring methods

Contact wiring

Inductive load wiring

In principle, protective measures should intervene directly at the source of the interference.

Wiring a load should therefore be given priority over wiring the contact.

The following points are advantageous for the load circuit (image on right):

1. The circuit is only loaded with the induction voltage during interruption. By contrast, the sum of the operating voltage and the induction voltage is applied to the contact circuit.
2. When the contact is open, the load is electrically isolated from the operating voltage.
3. It is not possible for the load to be activated or to "stick" due to undesired operating currents, e.g., from RC elements.
4. Cut-off peaks of the load cannot be coupled into parallel control lines.

Nowadays, solenoid valves are usually connected using valve plugs that are also supplied with LEDs and components that limit the induction voltage. Valve plugs with an RC element, varistor or Zener diode often do not quench the arc and only serve to comply with legislation governing EMC. Only valve plugs with an integrated 1N4007 freewheeling diode quench the arc quickly and safely, thereby increasing the service life of the relay by a factor of 5 to 10. Valve plugs with LED, integrated 1N4007, and free cable end can be supplied on request as part of the SAC range.

Load wiring	Additional dropout delay	Defined induction voltage limitation	Effective bipolar attenuation	Advantages/disadvantages
Diode 	Large	Yes (U_D)	No	Advantages: <ul style="list-style-type: none"> • Good effect in terms of extending the service life of the contacts • Easy implementation • Inexpensive • Reliable • Dimensioning not critical • Low induction voltage Disadvantages: <ul style="list-style-type: none"> • Attenuation only via load resistor • Long dropout delay
Diode/Zener diode series connection 	Medium to small	Yes (U_{ZD})	No	Advantages: <ul style="list-style-type: none"> • Dimensioning not critical Disadvantages: <ul style="list-style-type: none"> • Attenuation only above U_{ZD} • Minimal effect in terms of extending the service life of the contacts
Suppressor diode 	Medium to small	Yes (U_{ZD})	Yes	Advantages: <ul style="list-style-type: none"> • Inexpensive • Dimensioning not critical • Limitation of positive peaks • Suitable for AC voltages Disadvantages: <ul style="list-style-type: none"> • Attenuation only above U_{ZD} • Minimal effect in terms of extending the service life of the contacts
Varistor 	Medium to small	Yes (U_{VDR})	Yes	Advantages: <ul style="list-style-type: none"> • High energy absorption • Dimensioning not critical • Suitable for AC voltages Disadvantages: <ul style="list-style-type: none"> • Attenuation only above U_{VDR} • Minimal effect in terms of extending the service life of the contacts
R/C combination 	Medium to small	No	Yes	Advantages: <ul style="list-style-type: none"> • HF attenuation due to energy storage • Suitable for AC voltages • Level-independent damping Disadvantages: <ul style="list-style-type: none"> • Precise dimensioning required • High inrush current surge • Minimal effect in terms of extending the service life of the contacts

Switching small loads

Small loads must be processed mainly in applications where signals must be forwarded to control inputs (e.g., of a PLC).

With these loads, no switching sparks (arcs) occur on the contacts in the small load range.

In addition to the constant cleaning effect due to contact friction, this switching spark assumes the function of penetrating non-conductive contamination layers that are formed on the contact surfaces of power contacts.

Application example: measurement point changeover

Application example: PLC input signal

These contamination layers are usually oxidation or sulfidation products of the contact materials silver (Ag) or silver alloys such as silver nickel (AgNi) or silver tin oxide (AgSnO). As a result, the contact resistance may rise so considerably within a short time that reliable switching is no longer possible in the case of small loads.

Due to these properties, the high-performance contact materials mentioned are not suitable for small load applications.

Gold (Au) has become accepted as the contact material of choice for these areas of application mainly on account of its low and constant contact resistances even with small loads and its insensitivity to sulfurous atmospheres.

For the smallest of loads and even greater contact reliability, double contact relays with gold contacts are used.

The slotted contact spring in this design provides two parallel contact points with even lower contact resistances and considerably higher contact reliability.

Switching large loads

A few important points also need to be considered with regard to switching operations in the large load range that involve power contacts made of either silver (Ag) or silver tin oxide (AgSnO).

A basic distinction must be made between switching DC and AC loads.

Switching large AC loads

When switching large AC loads, the relay can be operated up to the corresponding maximum values for switching voltage, current, and power. The arc that occurs during interruption depends on the current, voltage, and phase angle. This cut-off arc usually disappears automatically the next time the load current passes through zero.

In applications with an inductive load, an effective protective circuit must be provided, otherwise the service life of the system will be reduced considerably.

Switching large DC loads

Conventional switching relays can only switch off relatively small direct currents (which contrasts with their ability to switch off the maximum permissible AC current), since there is no zero crossing to extinguish the arc automatically. This maximum DC value is also dependent to a large extent on the switching voltage and is determined, among other things, by constructional features such as contact spacing and contact opening speed.

The corresponding current and voltage values are documented by relay manufacturers in arc or load limit curves.

A non-attenuated inductive DC load fur-

Example of a load limit curve (dependent on the type)

ther reduces the values given for switchable currents. The energy stored in the inductance can cause an arc to occur, which forwards the current through the open contacts.

With an effective contact protection circuit, preferably type 1N4007 freewheeling diodes, the service life can be increased by a factor of 5 to 10 compared with unprotected or poorly protected inductive loads (see also "Contact protection circuits" section).

If higher DC loads than those documented are to be switched or if the electrical service life is to be increased, several contacts of a relay can be connected in series. See, for example, REL-IR... industrial relays.

Alternatively, solid-state relays with DC voltage output can also be used.

Switching lamps and capacitive loads

Regardless of the type of voltage, all kinds of lamps and loads with a capacitive component impose extreme requirements on the switching contacts. The moment it is switched on, in other words precisely in the dynamic chattering phase of the relay, extremely powerful current peaks occur.

These are often in the region of several tens of amps, and not infrequently are known to exceed 100 A, which results in welding of the contact. This can be remedied by using specially optimized "lamp load relays" that can cope with these inrush peaks. See, for example, PLC...IC type.

Switching capacity in accordance with utilization categories AC15 and DC13 (IEC 60947)

In practice, both the maximum interrupting rating for AC loads and the DC interruption values taken from the load limit curves provide only a rough guide for the choice of relay. In reality, this is insufficient, since real loads in the vast majority of industrial applications have inductive or capacitive components and the wiring of the loads can be totally different. As already described, this sometimes leads to considerable variations in terms of service life.

The IEC 60947 contactor standard seeks to avoid these disadvantages by dividing the loads into various utilization categories (DC13, AC15, etc.). This standard is also partly applied to relays. However, users must be aware of the fact that these values are only applicable in practice to a limited extent as well, since all DC13 and AC15 test loads are highly inductive and are also operated without any protective circuit at all (see "Contact protection circuit" section). Moreover, the switching capacity test in accordance with IEC 60947 only requires 6060 cycles to be performed by way of a minimum requirement.

A much more reliable way to determine the switching capacity and the anticipated service life is to refer to the specific application data. Using a comprehensive data bank, the service life can be accurately estimated for most applications and, if necessary, suggestions for improvement can be made. In the case of critical applications, the user is advised to gather service life information based on empirical data.

Basics of solid-state relay technology

Control side

Solid-state relays for various voltage and power levels are available from Phoenix Contact for use as interface modules designed to match process I/O devices to control, signaling, and regulating devices. The solid-state relay element which is actually located in the module is limited to one defined voltage range by virtue of its design. The current consumption on the input side fluctuates depending on the circuit architecture and voltage level.

To accommodate all industrial voltages between 5 V and 230 V, an input circuit is provided. The inputs for DC voltage and AC voltage must always be differentiated.

DC input

Adjustments are made in accordance with the various voltage levels by adding electronics which have been specially adapted to the desired voltage range. In the case of most modules, a polarity protection diode provides reliable protection against destruction in the event of a control voltage being connected incorrectly. Specially coordinated filters reliably suppress possible high-frequency noise emissions.

Figure 1: block diagram for DC input

AC input

The solid-state relay element requires a stable control voltage to ensure reliable operation. In the case of the AC input, this is achieved by connecting a rectifier and filter capacitor upstream. Rectifying is followed, in principle, by the same circuit architecture as the DC input.

The switching frequency always lies below half the mains frequency. Due to the filter capacitor, a higher switching frequency cannot be achieved. This would result in continuous through-switching.

Figure 2: block diagram for AC input

Load side

Depending on the application and the type of load, the solid-state relay output must meet various requirements. The following are crucial:

- Power amplification
- Matching the switching voltage and the switching current (AC/DC)
- Short-circuit protection

For these different applications, the solid-state relay element must also be processed using additional electronics on the output side.

DC output

In order to achieve the necessary output power, the solid-state relay element is supplemented by one or more semiconductor components.

The on-site user should nevertheless simply regard the connection terminal blocks of the output as conventional switch connections. Observing the specified polarity is the only essential requirement.

For practical reasons, the following criteria should be taken into account when selecting a suitable solid-state relay:

1. Operating voltage range (e.g., 12 ... 60 V DC)
This determines the minimum or maximum voltage to be switched. The lower value must be observed in order to ensure reliable operation. In order to protect the output transistor, the upper value must not be exceeded.
2. Maximum continuous current (e.g., 1 A)
This value indicates the maximum continuous current. If this value is exceeded continuously, the output semiconductor will be destroyed. The dependence of the output current on the ambient temperature of the solid-state relay should also be taken into consideration. A de-rating curve is therefore generally specified for solid-state power relays. This

shows the maximum load current as a function of the ambient temperature.

3. Output circuit

The 2-conductor output is similar to a mechanical contact. Only the polarity of the connections is specified and must be observed.

Figure 3: 2-conductor output

The 3-conductor output is non-isolated and requires both potentials from the voltage source on the output side to be connected if it is to operate reliably.

When switched off, a permanent reference to ground (negative potential) is established. In addition, this output circuit offers the advantage of an almost constant internal resistance.

Figure 4: 3-conductor output

AC output

In order to control the switching and control devices for AC voltage, a semiconductor for AC voltage (TRIAC or thyristor) is connected downstream of the solid-state relay element.

As with the DC output, it is particularly important to consider the maximum operating voltage range and the maximum continuous load current as a function of the ambient temperature.

Basics of solid-state relay technology

In addition, the maximum peak reverse voltage of the TRIAC (e.g., 600 V) is crucial with AC outputs. This must not be exceeded even in the case of voltage fluctuations or interference voltage peaks in order to prevent destruction. That is why the AC outputs of all solid-state relays from Phoenix Contact have an internal RC protective circuit to protect against interference voltage peaks.

Application notes

Input solid-state relays acting in the direction from the I/O devices to the controller (signaling, controlling, monitoring)

Plug-in version:

- PLC-O...

Modular version:

- DEK-OE...
- EMG 10-OE...
- SIM-EI...
- OPT...

Figure 5: basic circuit diagram of AC output

Protective circuits

The moment inductive loads (contactors, solenoid valves, motors) are switched off, surge voltages occur and these can reach very high amplitudes. Electronic components and switching elements are particularly susceptible to these. A protective circuit should therefore always be provided to prevent destruction.

A parallel connection to the load effectively reduces the switching surge voltage to a harmless level. Depending on the solid-state relay output and type of load:

- A freewheeling diode/suppressor diode (DC only)
 - A varistor (AC and DC)
 - Or an RC element (AC only)
- can provide the necessary protection.

Output (power) solid-state relays acting in the direction from the controller to the I/O devices (switching, amplifying, controlling)

Plug-in version:

- PLC-O...

Modular version:

- DEK-OV...
- EMG 10-OV
- EMG 12-OV
- EMG 17-OV
- OV...
- OPT...

Figure 6: protective circuit with DC voltage output

Figure 7: protective circuit with AC voltage output

Example: load contactor monitoring (DC contactor)

Example: load contactor monitoring (AC contactor)

Example: position indication with limit stop contact or initiator

Example: switching the contactor, solenoid valve or motor (DC load)

Example: switching the contactor, solenoid valve or motor (AC load)

Remarks:

- 1) Ground (negative) potential from the input and output of the solid-state relay must not be connected.
- 2) DC loads must be provided with an effective protective circuit (e.g., diode).
- 3) AC loads must be protected with a varistor or an RC element.

RIFLINE complete is an inexpensive relay system with various accessories. It consists of DIN rail bases, electromechanical or solid-state relays, plug-in input/interference suppression modules, marking material, and bridging material. The range of accessories is rounded off with a timer module. This can be used to transform a basic relay into a timer relay with three different functions.

The RIFLINE complete relay range consists of seven different base versions from RIF-0 to RIF-4 – these range from one N/O contact up to four PDT contacts. The field of application of this product group ranges from coupling relay applications with switching currents of one milliamp to replacement for miniature contactors with currents up to 16 A.

The relay bases feature push-in connection technology, which enables quick and tool-free conductor contacting. The RIF-1 to RIF-4 bases offer double the contact options on both the input and output side.

On the input side of all bases, the negative potential (A2) can be bridged – regardless of the base size. On the output side, the grouped contact (11) can be bridged within the RIF-0 base version. This connection can also be bridged within the RIF-1 base size.

To offer diverse marking options, the engagement lever can be fitted with a zack marker strip. In addition, marker carriers

can be mounted on the bases so that additional marking surfaces are available.

RIFLINE complete can be extended using many elements from the CLIPLINE complete accessories range. This includes marking material, bridges, and test adapters.

To make ordering and management easy, RIFLINE complete modules are provided in the most popular voltages as complete modules with relay and input/interference suppression module. For individual assembly, tailored to the requirements of the application, additional voltage levels are offered in the modular system.

**RIF-0**

The narrow 6.2 mm RIF-0 base series is designed for miniature relays with one contact. Switching currents up to 6 A are implemented here. Two base versions are available: 1 N/O contact and 1 PDT contact. RIF-0 is therefore a good choice for all coupling applications.

**RIF-1**

The narrow 16 mm RIF-1 base series is designed for miniature relays with 2 contacts. Currents up to 13 A can be switched when using the FBS 2-8 plug-in bridge. This is the ideal relay for applications that require coupling, power switching, and signal duplication.

**RIF-2**

The 31 mm wide RIF-2 base series is designed for industrial relays with up to 4 contacts. Currents up to 12 A are no problem for these bases. This relay is ideal for applications that require power and signal multiplication.

**RIF-3**

The 40 mm wide RIF-3 base series is designed for octal relays with up to 3 contacts. Switching currents up to 10 A can be implemented here. Two base versions are available: 2 PDT contacts and 3 PDT contacts. RIF-3 bases are ideal for all applications that require power and signal multiplication.

**RIF-4**

The 43 mm wide RIF-4 base series is designed for power relays with up to 3 contacts. Currents up to 16 A can be switched. RIF-4 bases are a good choice for applications that require power and signal multiplication, e.g., in miniature contactor applications.

**Accessories**

A wide range of accessories are available for the RIFLINE complete relay system that round off the range. These include bridges, professional marking material, special function modules, test plugs, and end brackets.

Relay modules

RIFLINE complete

Modular RIF-0 relay base

Relay base that can be fitted with miniature power relays or solid-state relays with a nominal voltage of 12 to 24 V DC.

The advantages:

- Integrated freewheeling diode for input circuit and interference suppression circuit
- LED for status display
- Safe isolation according to DIN EN 50178 between coil and contact
- Professional marking material
- Holders for test plugs
- Professional bridging of adjacent modules saves wiring time (A2 and 11/13)
- FBS 2-6 plug-in bridges for the input and output side

Notes:
Type of insulating housing: Polyamide PA non-reinforced, color: gray.
For further marking systems and mounting material, see Catalog 5.

Plug-in miniature power relays

Plug-in miniature power relays suitable for RIF-0 and PLC-INTERFACE relay bases.

The advantages:

- Power contacts up to 6 A
- Multi-layer gold contact or power contact
- High degree of protection RT III (comparable with IP67)
- Safe isolation according to DIN EN 50178 between coil and contact
- Can be soldered in on PCB

1 PDT

Notes:
If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The maximum values of the power contact relay are then valid. This can result in a shorter service life than with a pure power contact.
For dimensional drawings and perforations for assembly, see page 344

Relay modules

RIFLINE complete

Modular RIF-1 relay base

Relay base that can be fitted with 1 or 2 PDT relays or solid-state relays.

Range of accessories includes:

- Plug-in input and interference suppression module
- Plug-in timer module
- Relay retaining bracket with ejector function and holder for marking material
- Comprehensive range of marking material
- Test plug
- FBS 2-6 plug-in bridges for the input side (A2)
- FBS 2-8 plug-in bridges for the output side (11/21)

Notes:
Type of insulating housing: Polyamide PA non-reinforced, color: gray.
For further marking systems and mounting material, see Catalog 5.

Plug-in miniature power relays

Plug-in miniature power relays with 1 or 2 PDT contacts, suitable for RIF-1, PR1, and PLC-INTERFACE relay bases.

The advantages:

- Power contacts up to 16 A
- Multi-layer gold contact or power contact
- High degree of protection up to RT III (comparable with IP67) depending on type

1 PDT relay

2 PDT relay

Notes:
If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The maximum values of the power contact relay are then valid. This can result in a shorter service life than with a pure power contact.

Plug-in solid-state relays

Plug-in solid-state relays suitable for RIF-1, PR1, and PLC-INTERFACE relay bases.

The advantages:

- Switching capacity of up to 24 V DC/5 A
- RT III wash tight (comparable to IP67)
- Vibration- and shock-resistant
- Wear-free and long-lasting
- Zero voltage switch at AC output
- Can be soldered in on PCB

Notes:

For dimensional drawings and perforations for assembly, see page 345

RIF-RH-2	2900954	10

Accessories

Type	Order No.	Pcs. / Pkt.

Plug-in industrial relays with 2 or 4 PDT contacts, suitable for RIF-2 and PR2 relay bases.

The advantages:

- Detectable manual operation
- Mechanical switch position indicator
- Integrated status LED
- Multi-layer gold contact or power contact
- DC types with integrated freewheeling diode

2 PDT relay

4 PDT relay

Notes:
For other voltages, see www.phoenixcontact.net/products

Modular RIF-3 relay base

Relay base that can be fitted with 2 or 3 PDT relays.

Range of accessories includes:

- Plug-in input and interference suppression module
- Plug-in timer module
- Relay retaining bracket with ejector function and holder for marking material
- Comprehensive range of marking material
- Test plug
- FBS 2-6 plug-in bridges for the input side (A2)

Notes:
Type of insulating housing: Polyamide PA non-reinforced, color: gray.
For further marking systems and mounting material, see Catalog 5.

2 PDT relay base for octal relay

N

Nominal voltage U_N

Relay modules

RIFLINE complete

Plug-in high-power relays

N

Plug-in high-power relays with 3 N/O contacts suitable for the RIF-4 relay base.

The advantages:

- Use in miniature contactor applications
- Switching current of up to 16 A
- Up to 440 V AC switching voltage
- Full shutdown by means of ≥ 3 mm contact opening

3 N/O relay

Plug-in timer module for RIF-1, RIF-2, RIF-3, and RIF-4

The multifunctional plug-in timer module transforms the relay module into a timer relay. The RIF-1 to RIF-4 bases can be fitted with this module. Using DIP switches, you can choose from three time ranges and select four time functions. Fine adjustments to the time are made using a potentiometer. Relays can be operated with an input voltage of 24 V AC/DC.

Functions:

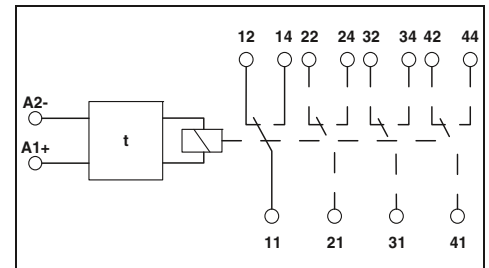

- Switch-on delay
- Single shot leading edge
- Flasher/pulse generator

Time ranges:

- 0.5 s - 10 s
- 5 s - 100 s
- 0.5 min - 10 min
- 5 min - 100 min

Description

Timer module, for mounting on RIF-1 to RIF-4, with LED status indicator for extending a relay module to create a timer relay with an input voltage of 24 V AC/DC

Flasher/pulse generator

Relay modules

RIFLINE complete

Fully mounted RIF-0 relay modules

Fully mounted RIF-0 relay modules, consisting of:

- Relay base
- 1 N/O contact or 1 PDT relay
- Relay ejector lever on the housing

The advantages:

- Status LED integrated in the relay base
- Operational reliability thanks to sealed relay
- Safe isolation between coil and contact side
- Professional bridging of adjacent modules saves wiring time
- For FBS 2-6 plug-in bridges for the input and output side, see page 318.

The PLC-INTERFACE relay system is the interface between the controller and system I/O devices.

The universal design is compact and space-saving. While the narrow 6.2 mm module has one contact, the 14 mm version is available with two contacts. The modules can be equipped with either an electromechanical or a solid-state relay.

They are protected against environmental influences by RTIII (IP67). The relays also offer safe isolation according to DIN EN 50178 (VDE 0160).

PLC-INTERFACE is available with three connection technologies. Depending on the area of application, screw, spring-cage or push-in connection can be selected.

In addition to the universal types, PLC-INTERFACE is also available in numerous special versions. These include:

- Sensor and actuator modules that can accommodate all connections directly on the interface
- Modules for high inrush or continuous currents
- Railway modules, which meet specific railway requirements
- Filter modules, which filter out interference on the input side

Plug-in bridges are available for all modules for simple potential distribution. In addition, solutions from system cabling applications offer easy connection to the plant control system. VARIOFACE adapters can be used to reduce wiring effort considerably. Installation is simplified significantly thanks to the integrated input and protective circuit.

Standard marking material from CLIPLINE complete modular terminal blocks can be used to mark PLC-INTERFACE.

Adapters for the system cabling

The PLC-V8... adapter is used to connect 8 PLC-INTERFACE modules to the PLC system cabling for input and output functions. For more details, see page 369

6.2 mm design width

PLC-R...21 and PLC-O... relay and solid-state relay modules with PDT or N/O contact, designed for universal use. Available with screw, spring-cage or push-in connection.

14 mm design width

PLC-R...21-21 includes plug-in relays with two PDT contacts for switching capacities of up to 250 V AC/6 A. Available with screw, spring-cage, and push-in connection.

Feed-through terminal block

PLC-VT... is the feed-through terminal block for PLC-INTERFACE and the system cabling for passive signal transfer. For more details, see page 486

Sensors/actuators

PLC...SEN and PLC...ACT do not require additional supply/output terminal blocks. All connections are connected directly.

High currents

PLC...IC is ideal for high inrush currents, e.g., from lamp loads. PLC...HC are the modules to use for applications with high continuous load currents.

Railway applications

PLC...RW relay or solid-state relay modules are suitable for railway requirements. They are only available with spring-cage and push-in connection.

Interference signals on the input side

PLC-B...SO46 basic terminal blocks are used for filtering interference currents and interference voltages on the input side.

Accessories

The entire PLC-INTERFACE system can be extended with a wide range of accessories, such as power terminal blocks or plug-in bridges. For more details, see page 368

Relay modules

PLC series

Universal PLC series with PDT relay

PLC-R... is the relay series that can be used universally and consists of basic terminal blocks and plug-in relays with PDT contacts.

- The advantages:
- Slim design
 - Screw, spring-cage, and push-in technology
 - Functional plug-in bridges
 - Integrated input and interference suppression circuit
 - RT III sealed relay
 - Safe isolation according to DIN EN 50178 between coil and contact
 - Efficient connection to system cabling using V8 adapter

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
Separating plate PLC-ATP must be installed for voltages larger than 250 V (L1, L2, L3) between identical terminal blocks in adjacent modules. Potential bridging is then carried out with FBST 8-PLC... or FBST 500....
If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The maximum values of the power contact relay are then valid. This can result in a shorter service life than with a pure power contact.
For diagrams of operating voltage ranges, see page 343
Note: for marking material (ZB 6), see "CLIPLINE industrial connection technology, marking material for terminals, conductors, and cables".
1) 120 and 230 V types up to 55°C
2) 230 V types up to 55°C
3) EMC: Class A product, see page 571

Relay modules

PLC series

Universal PLC series with solid-state relays

PLC-O... is the solid-state relay series that can be used universally consisting of basic terminal blocks and plug-in solid-state relays.

The advantages:

- Slim design
- Screw, spring-cage, and push-in technology
- Functional plug-in bridges
- Integrated input circuit
- RT-III sealed solid-state relays
- High switching capacity
- Zero voltage switch at AC output
- Efficient connection to system cabling using V8 adapter

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
Separating plate PLC-ATP must be installed for voltages larger than 250 V (L1, L2, L3) between identical terminal blocks in adjacent modules. Potential bridging is then carried out with FBST 8-PLC... or FBST 500....
For derating curves see page 345
1) EMC: Class A product, see page 571

Relay modules

PLC series

PLC actuator series for output functions

PLC actuator series for coupling controller and actuators, such as motors, contactors, valves, etc.

The advantages:

- Actuator connected directly to relay module
- No need for additional modular terminal blocks
- Space savings of up to 80%
- Time savings of up to 60%
- Screw, spring-cage, and push-in technology
- Relay modules with safe isolation according to DIN EN 50178 between coil and contact
- Functional plug-in bridges
- Efficient connection to system cabling using V8 adapter

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
Separating plate PLC-ATP must be installed for voltages larger than 250 V (L1, L2, L3) between identical terminal blocks in adjacent modules. Potential bridging is then carried out with FBST 8-PLC... or FBST 500....

Output data	
Max. / min. switching voltage	33 V DC / 3 V DC
Max. inrush current	15 A (10 ms)
Min./max. switching current	- / 5 A (see derating curve)
Output protection	Protection against polarity reversal, Surge protection
Voltage drop at max. limiting continuous current	≤ 200 mV
Leakage current in off state	-
Phase angle (cos ϕ)	-
Max. load value	-
General data	
Rated insulation voltage	100 V DC
Rated surge voltage	1.5 kV, basic insulation
Ambient temperature (operation)	-20°C ... 60°C
Standards/regulations	IEC 60664, EN 50178, IEC 62103
Pollution degree/surge voltage category	2 / III
Mounting position/mounting	Refer to Derating / In rows with zero spacing
Connection data solid / stranded / AWG	0.14 - 2.5 mm ² / 0.14 - 2.5 mm ² / 26 - 14
Dimensions	14 mm / 80 mm / 94 mm

Max. AC voltage output of 2 mA

Relay modules

PLC series

PLC sensor series for input functions

PLC sensor series for coupling controller and sensors, such as proximity switches, limit switches or auxiliary contacts

The advantages:

- Direct connection of sensor to relay module
- No need for additional modular terminal blocks
- Space savings of up to 80%
- Time savings of up to 60%
- Screw, spring-cage, and push-in technology
- Relay modules with safe isolation according to DIN EN 50178 between coil and contact
- Functional plug-in bridges
- Efficient connection to system cabling using V8 adapter

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
Separating plate PLC-ATP must be installed for voltages larger than 250 V (L1, L2, L3) between identical terminal blocks in adjacent modules. Potential bridging is then carried out with FBST 8-PLC... or FBST 500....
If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The maximum values of the power contact relay are then valid. This can result in a shorter service life than with a pure power contact.
For diagrams of operating voltage ranges, see page 343
1) 120 and 230 V types up to 55°C
2) EMC: Class A product, see page 571

Max. interrupting rating

Basic terminal blocks with interference current filter that can be fitted with relays

PLC basic terminal blocks with integrated filter to protect against interference voltages or currents due, for example, to long control lines

The advantages:

- Resistant to interference currents
- High relay release voltage

Typical applications:

- Applications with long control lines
- Use of AC output boards, resulting in residual AC currents
- Screw, spring-cage, and push-in technology

Notes:

Relay modules

PLC series

Basic terminal blocks with interference current filter that can be fitted with solid-state relays

PLC basic terminal blocks with integrated filter to protect against interference voltages or currents due, for example, to long control lines

The advantages:

- Resistant to interference currents
- High relay release voltage

Typical applications:

- Applications with long control lines
- Use of AC output boards, resulting in residual AC currents
- Screw, spring-cage, and push-in technology

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
Separating plate PLC-ATP must be installed for voltages larger than 250 V (L1, L2, L3) between identical terminal blocks in adjacent modules. Potential bridging is then carried out with FBST 8-PLC... or FBST 500....
For derating curves see page 345
1) EMC: Class A product, see page 571

Plug-in miniature power relays

Plug-in miniature power relays suitable for PLC-INTERFACE and RIF-0, RIF-1, and PR1 relay bases.

The advantages:

- Power contacts up to 16 A
- Multi-layer gold contact or power contact
- High degree of protection up to RT III (comparable with IP67) depending on type
- Safe isolation according to DIN EN 50178 between coil and contact

Notes:
If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The maximum values of the power contact relay are then valid. This can result in a shorter service life than with a pure power contact.
For dimensional drawings and perforations for assembly, see page 344
For diagrams of operating voltage ranges, see page 343

Plug-in solid-state relays

Plug-in solid-state relays suitable for PLC-INTERFACE and RIF-0, RIF-1, and PR1 relay bases.

The advantages:

- Switching capacity of up to 24 V DC/5 A
- RT III wash tight (comparable to IP67)
- Vibration- and shock-resistant
- Wear-free and long-lasting
- Zero voltage switch at AC output
- Can be soldered in on PCB

Max. DC voltage output of 3 A

Max. DC voltage output of 100 mA

Notes:

For dimensional drawings and perforations for assembly, see page 345

Operating voltage ranges for PLC-INTERFACE, 6.2 mm versions, equipped with relay

Operating voltage ranges for PLC-INTERFACE, 14 mm versions, equipped with relay

General conditions:
Direct alignment in the block, all devices 100% operating time, horizontal or vertical mounting.

Curve A
Maximum permissible continuous voltage U_{max} , with limiting continuous current on the contact side (see relevant technical data).

Curve B
Minimum permissible operate voltage U_{op} after pre-excitation¹⁾ (see relevant technical data).

^{1) Pre-excitation:} relay has been operated in a thermally steady state at the ambient temperature T_A with nominal voltage U_N and limiting continuous current on the contact side (see relevant technical data) (warm coil). After being switched off for a short time, the relay must reliably pick up again at U_{op} . The U_{op} values for cold coils ($T_{coil} = T_A = 20^\circ\text{C}$) indicated by other manufacturers yield better values, but are not practical.

State diagram

Operating state	Switching level Input	Light indicator, yellow LED	Light indicator, red LED	Alarm contact/CONTROL
Not activated	L	L	L	
Normal operation	H	H	L	
Over-load/short circuit	H	H	H	
Opencircuit	L	L	H	

UEGM-OE/AV logic pulse expansion module

Time diagrams for UEGM-OE/AV-24DC/24DC/100

Scenario 1: input pulse $t_i < t_{O\ set}$

Operating voltage present

Scenario 2: input pulse $t_i \geq t_{O\ set}$; $t_i = t_o$

Operating voltage present

Table of adjustable output pulse lengths

	DIP switches ¹⁾							
	S1	S2	S3	S4	S5	S6	S7	S8
Length of output pulses [ms] (when in "on" switch position)	10	-	-	-	-	-	-	-
	-	20	-	-	-	-	-	-
	-	-	50	-	-	-	-	-
	-	-	-	100	-	-	-	-
	-	-	-	-	200	-	-	-
	-	-	-	-	-	500	-	-
	-	-	-	-	-	-	1000	-
	-	-	-	-	-	-	-	1500

¹⁾ If no switch is actuated, the output voltage is not defined.

If the input pulse is longer than the set time, the output is switched off almost simultaneously with the input.

Intermediate values can be obtained by combining several DIP switches according to the following formula:

$$T_{tot} = \frac{1}{\frac{1}{t_1} + \frac{1}{t_2} + \dots + \frac{1}{t_n}}$$

Relay modules

PLC series

PLC-INTERFACE with two integrated relays

Relay module with two permanently soldered-in power relays

The advantages:

- 100% more channel density than the conventional 6.2 mm relay
- Two switching channels in a 6.2 mm housing
- Integrated input circuit/protective circuit
- Safe isolation according to DIN EN 50178 between coil and contacts and between contacts
- Screw, spring-cage, and push-in technology

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
1) EMC: Class A product, see page 571

Two integrated relays

Technical data

Input data	①
Typ. input current at U_N	7 [mA]
Response/release time at U_N	4 / 6 [ms]
Input circuit DC	Yellow LED, Protection against polarity reversal, freewheeling diode
Output data	
Contact material	AgNi
Max. switching voltage	250 V AC/DC
Min. switching voltage	24 V AC/DC
Limiting continuous current	3.5 A
Min. switching current	5 mA
General data	
Test voltage input/output	3 kV AC (50 Hz, 1 min.)
Test voltage output/output	3 kV AC (50 Hz, 1 min.)
Ambient temperature (operation)	-20°C ... 60°C
Mechanical service life	2×10^7 cycles
Standards/regulations	IEC 60664, EN 50178, IEC 62103
Connection data solid / stranded / AWG	0.14 - 2.5 mm ² / 0.14 - 2.5 mm ² / 26 - 14
Dimensions	6.2 mm / 80 mm / 86 mm W / H / D

Ordering data

Description	Input voltage U_N	Type	Order No.	Pcs. / Pkt.
PLC INTERFACE, with screw connection ①	24 V DC	PLC-2RSC-24DC/ 1')	2987309	10

① DC, ohmic load

Relay modules

PLC series

PLC-INTERFACE with manual switch and relay

Relay module with manual switch and integrated power relay for manual, zero, and automatic functions

The advantages are:

- Max. switching current of 6 A
- Only 6.2 mm wide
- Floating confirmation contact
- Safe isolation according to DIN EN 50178 between coil and contact
- Screw, spring-cage, and push-in technology

Notes:
Type of housing: Polyester PBT non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
For the protection of input and output, inductive loads must be dampened with an effective protection circuit.
Separating plate PLC-ATP is to be used in the following cases: always at the start and end of a PLC terminal strip, for voltages greater than 250 V (L1, L2, L3) between the same terminal points of neighboring modules (potential bridging then takes place with FBST 8-PLC... or FBST 500...) and with safe isolation between neighboring modules.
Module height: PLC-...-S/H = 90 mm; PLC-...-S/L: = 86 mm
PLC...H - manual operation PLC...L - operation using screwdriver
1) EMC: Class A product, see page 571

Relay modules

PLC series

PLC-INTERFACE with an integrated solid-state relay

The slim 6.2 mm PLC housing with integrated electronics in various versions offers the following advantages:

- Option of bridging adjacent modules
- Status display
- Protection circuits in input and output
- Wear-resistant and bounce-free switching
- Integrated protection circuit
- DC outputs of up to 300 V DC/1 A or up to 24 V DC/10 A
- Electronic PDT output of up to 48 V DC/500 mA
- Screw, spring-cage, and push-in technology

Notes:
Type of housing: Polyester PBT non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
For the protection of input and output, inductive loads must be dampened with an effective protection circuit.
Separating plate PLC-ATP is to be used in the following cases: always at the start and end of a PLC terminal strip, for voltages greater than 250 V (L1, L2, L3) between the same terminal points of neighboring modules (potential bridging then takes place with FBST 8-PLC... or FBST 500...) and with safe isolation between neighboring modules.
The housings of the following modules are open on one side: - PLC-OS...-300DC/1 - PLC-OS...-24DC/24DC/10/R

PLC-INTERFACE

Solid-state relays up to 100 kHz

A solid-state relay for the safe acquisition of short pulses.

- Status display
- Bridging options
- Limit frequency of up to 100 kHz
- Push-pull stage on output side
- Features a capacitor on the input side for interference suppression

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5

PLC-INTERFACE for the TTL signal at the input

The PLC-BS...TTL/1 basic terminal block is controlled using a TTL (5 V) input signal and can be equipped with a mechanical relay or a solid-state relay as an option. The basic terminal block equipped with a robust miniature relay offers the following advantages:

- 6.2 mm slim design width
- Bridging options
- Status display
- Screw and spring-cage connection
- RTIII degree of protection
- Safe isolation in accordance with EN 50178 (VDE 0160)
- 4 kV_{rms} electrical isolation between coil and contact.
- Screw, spring-cage, and push-in technology

Notes:
Type of housing: Polyester PBT non-reinforced, color: green.

PLC-INTERFACE with solid-state relays for railway applications

The PLC-OSP...RW interface modules are intended for use as per DIN EN 50155 (VDE 0115 part 200) "Railway applications, Part 200: Electronic devices in rail vehicles".

The advantages:

- Temperature range -25°C to +70°C
- Input voltage range 0.7 - 1.25 x U_N
- Shock resistance according to DIN 50155 (requirements according to EN 61373).
- Screw, spring-cage, and push-in technology

Relay modules

PLC series

PLC-INTERFACE for railway applications

Relay modules with extended input voltage and temperature range, specifically for use in railway applications

The advantages:

- Temperature range -25°C to +70°C
- Input voltage range 0.7 to 1.25 x UN
- Vibration and shock resistance to EN 50155
- Safe isolation according to DIN EN 50178 between coil and contact
- Spring cage and push-in connection method

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
Separating plate PLC-ATP must be installed for voltages larger than 250 V (L1, L2, L3) between identical terminal blocks in adjacent modules. Potential bridging is then carried out with FBST 8-PLC... or FBST 500....
If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The maximum values of the power contact relay are then valid. This can result in a shorter service life than with a pure power contact.

PLC-INTERFACE for railway applications

Relay module for input voltages with a nominal frequency of 16.7 Hz

The advantages:

- Input nominal frequency 16.7 Hz
- Vibration and shock resistance to EN 50155
- Safe isolation according to DIN EN 50178 between coil and contact
- Spring cage and push-in connection method

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
Separating plate PLC-ATP must be installed for voltages larger than 250 V (L1, L2, L3) between identical terminal blocks in adjacent modules. Potential bridging is then carried out with FBST 8-PLC... or FBST 500....
If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The values in parentheses then apply for further operation. This can result in a shorter service life than with a pure power contact.
1) EMC: Class A product, see page 571

For 16.7 Hz input frequency with 2 PDTs

Technical data

Input data	
Nominal input voltage U_N	230 V AC
Input nominal frequency	16.67 Hz
Permissible range (with reference to U_N)	(refer to the diagram)
Typ. input current at U_N	4.8 mA (with AC)
Typ. response time at U_N	20 ms
Typ. release time at U_N	60 ms
Input circuit	Yellow LED, Bridge rectifier
Output data	
Contact type	Single contact, 2-PDT
Contact material	AgNi, hard gold-plated
Max. switching voltage	30 V AC / 36 V DC (250 V AC/DC)
Min. switching voltage	100 mV (5 V AC/DC)
Limiting continuous current	50 mA (6 A)
Max. inrush current	50 mA (8 A)
Min. switching current	1 mA (10 mA)
General data	
Test voltage input/output	6 kV
Ambient temperature (operation)	-25°C ... 60°C
Mechanical service life	Approx. 3×10^7 cycles
Standards/regulations	IEC 60664, EN 50178, IEC 62103
Pollution degree / Surge voltage category	2 / III
Connection data solid / stranded / AWG	0.14 - 2.5 mm ² / 0.14 - 2.5 mm ² / 26 - 14
Dimensions	14 mm / 80 mm / 94 mm W / H / D

Permissible input voltage range for PLC-RSP-230UC/21-21AU/RWF

Curve A
maximum continuous voltage at limiting continuous current = 6 A

Curve B
minimum operating voltage for pre-excitation with U_N and limiting continuous current = 6 A

PLC-INTERFACE for railway applications

Relay modules with extended input voltage and temperature range, specifically designed for railway applications

The advantages:

- Certified to EN 50155
- Optimum relay operation thanks to wide-range electronics
- Temperature range from -40°C to +70°C (short-term 85°C)
- Input voltage range 0.7 to 1.25 x U_N (short-term 1.4 x U_N)
- Vibration and shock resistance to EN 50155
- Safe isolation according to DIN EN 50178 between coil and contact
- Spring cage and push-in connection method

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
Separating plate PLC-ATP must be installed for voltages larger than 250 V (L1, L2, L3) between identical terminal blocks in adjacent modules. Potential bridging is then carried out with FBST 8-PLC... or FBST 500....
If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The maximum values of the power contact relay are then valid. This can result in a shorter service life than with a pure power contact.

PLC electronic sensor terminal block for NAMUR proximity sensors

The PLC-...EIK 1-SVN electronic sensor terminal block from Phoenix Contact converts the changeable resistance of a NAMUR sensor unit into a digital signal that can be read by all PLCs.

In addition, the electronics unit monitors the sensor side for short-circuits or wire breaks and reports this error via an integrated LED.

Due to a corresponding resistance circuit, the PLC-...-EIK 1-SVN can be used to monitor all mechanical switches (N/C contact or N/O contact) for short-circuits and/or wire break.

In addition to a high packing density, this switching amplifier features the following:

- Regulated power supply for the NAMUR proximity switch
- 24 V/50 mA digital output for directly connecting programmable logic controls
- Connection option for PLC-V8 adapter
- Screw, spring-cage, and push-in technology

Application 1

Application 2

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
Separating plate PLC-ATP is to be used in the following cases: always at the start and end of a PLC terminal strip, for voltages greater than 250 V (L1, L2, L3) between the same terminal points of neighboring modules (potential bridging then takes place with FBST 8-PLC... or FBST 500...) and with safe isolation between neighboring modules.
1) EMC: Class A product, see page 571

For inductive proximity sensors according to NAMUR, with light indicators for sensor signal and faults

Electronic reversing load relay for DC motors

The PLC-S...-ELR W 1/2-24DC electronic reversing load relays are used to switch mechanically commutated DC motors up to 24 V/2 A.

- Wear-free reversing
- Braking by controlling both inputs
- Short-circuit and surge- and overload-proof output
- Integrated locking circuit and load wiring
- Screw, spring-cage, and push-in technology

Notes:
Type of housing: Polyester PBT non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
Separating plate PLC-ATP is to be used in the following cases: always at the start and end of a PLC terminal strip, for voltages greater than 250 V (L1, L2, L3) between the same terminal points of neighboring modules (potential bridging then takes place with FBST 8-PLC... or FBST 500...) and with safe isolation between neighboring modules.
For the protection of input and output, inductive loads must be dampened with an effective protection circuit.

The PR series is a low-priced relay modular system, consisting of DIN rail bases, relays, plug-in input/interference suppression modules, engagement levers, and the matching marking labels and universal bridging materials for all bases. The modules are largely compatible with the usual standards on the market, have the major international approvals and are therefore accepted worldwide.

Besides the familiar relay bases with the screw connection method, relay bases with the spring-cage connection method for miniature power relays with one or two PDT contacts and for industrial relays with two or four PDT contacts are available in the PR series. The connections in these bases are configured with double spring cages for free, simple bridging of all potentials.

The PR series also boasts its own particular features:

- Relay retaining bracket: The EL... plastic relay retaining bracket, with which the relays can be held and, if necessary, ejected, have an exposed, smooth, large equipment marking area for standard self-adhesive labels that can be printed easily and inexpensively using standard printers. When fitted, the engagement lever is securely connected to the base, which means that the labeling cannot be lost.
- Industrial relays: All REL-IR... industrial relays have as standard an LED status display

and all DC types also have an integrated freewheeling diode. In most cases, this eliminates the plug-in input modules that are otherwise also used.

- Plug-in input modules with RC element: most standard input/interference suppression modules with an RC element used for compensation of interference coupling on long lines or in the event of leakage currents from electronic AC outputs have only low capacitance values. This greatly limits the filter effect. In contrast, the RC-120-230UC and RC3-120-230UC plug-in module series for mains voltage applications have a filter function that is improved up to a factor of 10. Unlike with the discharge resistors that are normally used for such applications, using RC plug-in modules gives rise to no additional heating!

PR1 series

The narrow 16 mm PR1 base series for relays with one or two contacts is available with a screw or spring-cage connection method. Both the traditional 2/2-level bases and two modern “logical” 1/3-level versions with fully opposite coil and contact connections are available.

PR2 series

The PR2 base series accommodates plug-in industrial relays with two or four PDT contacts. Like the PR1 series, the bases are available with screw and spring-cage connection methods, as well as in the traditional 2/2-level and modern “logical” 1/3-level versions.

PR3 series

The robust octal relays with two or three PDT contacts that are widely used in some areas fit on the PR3 base with touch-protected screw connections. All the base connections have a wide connection cross section and are arranged on one level with good accessibility.

The active components of the PR1 modular system include various miniature power relays (optionally available with manual test function) and electronic solid-state relays. Matching relay retaining brackets with integrated marking area prevent them from being shaken loose. Depending on requirements, input/interference suppression modules with various functions can also be plugged in. Marking labels and loop bridges in various colors that are suitable for universal use with all PR bases complete the range of accessories.

The PR2 modular system is specifically designed for plug-in industrial relays. Industrial relays from Phoenix Contact feature the following as standard: a manual test button, switch position indicator, status LED, and freewheeling diode (DC coils only). Interference suppression modules with a varistor or RC element can also be plugged in as an option. Relay retaining brackets with integrated marking areas prevent the relays from being shaken loose. Marking labels and loop bridges in various colors that are suitable for universal use with all PR bases complete the range of accessories.

The PR3 modular system is specifically designed for the robust octal relays. The relays have a switch position indicator and a manual test button and there is a wire bracket to prevent them from being shaken loose. Input/interference suppression modules with various functions can also be plugged in as an option. The base can be marked with an 8 x 20 mm standard adhesive label. Loop bridges in various colors for universal use round off the range of accessories.

Relay modules

PR series

Plug-in miniature power relays

Plug-in miniature power relays with 1 or 2 PDT contacts, suitable for RIF-1, PR1, and PLC-INTERFACE relay bases.

The advantages:

- Power contacts up to 16 A
- Multi-layer gold contact or power contact
- High degree of protection up to RT III (comparable with IP67) depending on type

1 PDT relay

2 PDT relay

Notes:
If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The maximum values of the power contact relay are then valid. This can result in a shorter service life than with a pure power contact.

Relay modules

PR series

Plug-in industrial relays suitable for PR2 relay base

Plug-in industrial relays with 2 or 4 PDT contacts, suitable for PR2 and RIF-2 relay bases.

The advantages:

- Lockable manual operation
- Mechanical switch position indicator
- Integrated status LED
- Multi-layer gold contact or power contact
- DC types with integrated freewheeling diode

2 PDT relay with power contacts

4 PDT relay with multi-layer gold contact

Notes:
For 48 V DC and 60 V DC types, see www.phoenixcontact.net/products

Relay modules

PR series

Modular PR3 relay base

Range of relay bases that can be fitted with 2 PDT or 3 PDT relays

Range of accessories includes:

- Plug-in input modules/interference suppression modules
- Relay retaining bracket
- Loop bridges

Notes:
Type of housing: Polyamide fiber reinforced PA-F, color: green.
Marking systems and mounting material See Catalog 5

Relay base for 2 PDT octal relay

Relay modules

PR series

Plug-in octal relays for high DC loads

Plug-in octal relays with two N/O contacts connected in series suitable for PR3 and RIF-3 relay bases.

The relays are specially designed for switching high DC loads.

Further advantages:

- Full shutdown by means of 2 x 1.7 mm contact opening
- With lockable manual operation
- Integrated status LED
- Integrated freewheeling diode with DC types

1 N/O contact, with blow magnet

1 N/O contact

Plug-in module , for mounting on PR..., with RD-element to attenuate the coil induction voltage and/or external interference peaks, Input voltage: - 12-24 V AC/DC $\pm 20\%$ (220 nF/100 Ω) - 48-60 V AC/DC $\pm 20\%$ (220 nF/220 Ω) - 120-230 V AC/DC $\pm 20\%$ (100 nF/470 Ω)	RC- 12- 24UC	2833741	10	RC3- 12- 24UC	2833893	10
	RC- 12- 24UC	2833754	10	RC3- 48- 60UC	2833903	10
	RC-120-230UC	2833767	10	RC3-120-230UC	2833916	10

Terminal assignment PR1 base / Solid-state relay								
Solid-state relays	Terminal blocks, PR1 base							
	A1	A2	11	12	14	21	22	24
SIM-EI...48DC/100	A2 (-)	A1 (+)			A	+		
SIM-EI...TTL/100	A2 (-)	A1 (+)			A	+	0	
SIM-EI...48DC/100RC	A2 (-)	A1 (+)			A	+		
SIM-EI-OV-24DC/24DC/3	A2 (-)	A1 (+)			A	+		
OPT-...24DC/5	A1 (+)	A2 (-)	13		14			
OPT-...230AC/2	A1 (+)	A2 (-)	13		14			

The relay bases of the PR1 series can also be equipped with wear-free solid-state relays (OPT... or SIM-EI...) as an alternative to the electromechanical relay.

LDP... and LV... plug-in modules cannot be used in conjunction with SIM-EI... solid-state relays

Relay modules

PR series

Fully mounted PR1 relay modules with screw connection

Fully mounted PR1 relay modules, consisting of:

- Relay base
- 1/2 PDT relay
- Relay retaining bracket
- Input module/interference suppr. module
- Marking labels

The advantages:

- Logical contact arrangement thanks to 1/3-level relay base
- Operational reliability thanks to sealed relay
- Safe isolation between coil and contact side

Notes:	
Type of housing:	Polyamide fiber reinforced PA-F, color: green.
For the protection of input and output, inductive loads must be dampened with an effective protection circuit.	
If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The maximum values of the power contact relay are then valid. This can result in a shorter service life than with a pure power contact.	
Other input voltages on request.

Relay modules

PR series

Fully mounted PR2 relay modules

Fully mounted PR2 relay modules, consisting of:

- Relay base
 - 2/4 PDT relay
 - Relay retaining bracket
 - Input module/interference suppr. module (AC types only)
 - Marking labels
- The advantages:
- Relay with lockable manual operation and status LED
 - With DC types, freewheeling diode is integrated into relay
 - Mechanical switch position indicator
 - Logical contact arrangement thanks to 1/3-level relay base
 - Screw or spring-cage connection
 - 4 PDT types with multi-layer gold contacts

Notes:
Type of housing: Polyamide fiber reinforced PA-F, color: green.
For the protection of input and output, inductive loads must be dampened with an effective protection circuit.
If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The maximum values of the power contact relay are then valid. This can result in a shorter service life than with a pure power contact.
Other input voltages on request.
The DC types do not have a plug-in module because the status LED and the freewheeling diode are integrated directly into the relay.

The Phoenix Contact DEK interface terminal blocks provide complete interface functions in modular terminal block housing that is just 6.2 mm wide. In conjunction with standard terminal block accessories, these high-capacity interfaces have not only the design but also the high level of user convenience of modular terminal blocks.

The main common feature of all Phoenix Contact interface terminal blocks is their width of just 6.2 mm. This saves 60% space in the control cabinet in comparison to conventional 15 mm wide coupling relays from modular systems.

The DEK range offers the best solution for all industrial voltages both for signal input and output.

High switching capacities are a matter of course for the DEK-REL... relay terminal block and the DEK-OV... solid-state relay terminal block.

The wear-free DEK-OV... power solid-state relay terminal block is used for applications that require a greater switching frequency in which electromechanical relays reach the end of their service life in a short time.

Integrated LEDs clearly indicate the switching status of the electronic terminal blocks and provide an excellent overview of the coupling level and the system.

Colored EB-DIK insertion bridges for the supply and ground signals make it possible to design the circuit simply and effectively.

Integrated protective circuits such as free-wheeling diodes, polarity reversal protection diodes, and surge protection elements protect the coupling modules and ensure optimum availability of the system.

DEK-REL-... relay terminal block

The Phoenix Contact relay terminal block with PDT contact offers the following advantages:

- Width of only 6.2 mm
- High switching capacity of 250 V AC/6 A
- Less storage, since PDT, N/O or N/C contacts can be wired
- Little wiring expense due to the use of EB-DIK insertion bridges
- IP67 protected relay housing
- Cadmium-free relay contacts
- 4 kV electrical isolation of input and output
- Safe isolation according to DIN EN 50178 (VDE 0160)
- Light indicator for signaling the switching status.

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
For the protection of relay coils and contacts, inductive loads must be dampened with an efficient protection circuit.
For further EB...DIK... insertion bridges, refer to page 403
1) EMC: Class A product, see page 571

Relay modules

DEK series

DEK-REL-24/1/SEN input interface and DEK-REL-24/1/AKT output interface

In addition to the familiar advantages of the DEK-REL... electronic terminal blocks, such as

- 2-layer contact with hard gold-plating for universal applications from 1 mA to 5 A continuous current
- 2 kV_{rms} electrical isolation of input and output
- Integrated input circuit

With this terminal block, "ALL" connections for a sensor or actuator are provided over a width of just 6.2 mm!

This means that 16 outputs take up a total constructional width of just 105.4 mm (including the power terminal block).

Advantages:

- Lower costs as the N terminal block is no longer required
- Wiring is reduced to a minimum
- Up to 73% more space

Notes:	
Type of housing:	Polyamide PA non-reinforced, color: green.
Marking systems and mounting material	See Catalog 5
For the protection of relay coils and contacts, inductive loads must be dampened with an efficient protection circuit.	
For further EB...DIK... insertion bridges, refer to page 403	
1) EMC: Class A product, see page 571

Relay modules

DEK series

DEK-OE... and DEK-OV... solid-state relay terminal blocks

Phoenix Contact DEK-OE and DEK-OV interface terminal blocks are only 6.2 mm wide but still provide a complete input or output interface with:

- Electrical isolation between input and output at up to 2.5 kV_{rms}
- Integrated input circuit
- Status display
- EB-DIK insertion bridges
- Labeling and mounting with modular terminal block convenience
- Wear-free switching up to 24 V DC/10 A and 240 V AC/800 mA
- Integrated output protection circuit
- Zero voltage switch at AC output
- Actuator version available.

Notes:	
Type of housing:	Polyamide PA non-reinforced, color: green.
Marking systems and mounting material	See Catalog 5
For the protection of input and output, inductive loads must be dampened with an effective protection circuit.

DEK-REL-24/1/S switch/relay terminal block

The functions “Manual”, “0”, “Automatic” are provided in a 6.2 mm narrow relay terminal block.

Interference-free relay and solid-state relay interfaces

Coupled interference voltages on the coil lines or leakage currents can cause malfunctions in conventional modules. These special interface modules, equipped with high switching thresholds and/or effective filters, ensure good functioning.

ST-REL... and EMG 17-REL... relay interfaces for switching lamp loads

Lamp loads and capacitive consumers produce extremely high inrush currents which weld conventional relay contacts. To prevent this, Phoenix Contact uses an arc-resistant contact optimized for these applications, which keeps these peaks under control.

ST-OV 3-24DC/400/3 plug-in solid-state power relay

The output of this component, dimensioned with a peak reverse voltage of 800 V, allows, for example, 230 V motors to be driven in simple reversible mode.

Power circuit breaker solid-state relay, with signal logic

These modules combine the features of a short-circuit-proof power solid-state relay and those of a thermomagnetic protection element.

DEK-OE-...100KHZ 100 kHz input solid-state relay

Input solid-state relay for reliable transmission of high frequency signals of the type that occur with, for example, incremental encoders.

Electronic sensor terminal block for NAMUR proximity sensors

For converting the changeable resistance of a NAMUR sensor into a digital signal that can be read by a PLC.

DEK-TR/INV inverter module

Module for converting NPN outputs to PNP outputs and PNP to NPN.

Relay module with manual switch

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
For the protection of input and output, inductive loads must be dampened with an effective protection circuit.
1) EMC: Class A product, see page 571

Relay module with manual switch and integrated power relay for manual, zero, and automatic functions

The advantages:

- Max. switching current of 5 A
- Only 6.2 mm wide
- Increased contact stability thanks to double contact
- Safe isolation according to DIN EN 50178 between coil and contact

Relay module with manual switch and integrated relay

Relay modules

Special relays and solid-state relays

Relay modules with interference current filter

Relay and solid-state relay modules with integrated filter to protect against interference voltages or currents due, for example, to long control lines

The advantages:

- Resistant to interference currents
- High relay release voltage

Typical applications:

- Applications with long control lines
- Use of AC output boards, resulting in residual AC currents

1 PDT, plug-in relay

1 PDT, soldered-in relay

Relay modules

Special relays and solid-state relays

Relay modules for high inrush currents

The Phoenix Contact relay modules of the type SO 38 have been designed for switching electrical equipment with high inrush currents.

Areas of application are:

- Inductive loads (motors, power contactors, etc.)
- Inductive/capacitive loads (fluorescent lamps, etc.)
- Ohmic loads (glow lamps, heaters).

The module is based on a relay with a special arc-resistant tungsten lead contact. This takes over the high inrush and interrupting current capacitively. The inductive main contact made of AgCdO takes over the continuous current up to 10 A reliably. With the EMG 17-REL...2E/SO38 model, this switching capacity is reached using a power relay with a set of silver tin oxide (AgSnO) contacts.

The module is available in two versions:

- Modular EMG rail-mountable housing with a design width of 17.5 mm
- Convenient ST-REL plug-in housing from the Phoenix ST series for mounting on the URELG or UDK-RELG basic terminal blocks.

Further features are:

- Snap-on mounting on the common EN rails
- Easy maintenance
- Clear labeling of the terminal blocks using Phoenix Contact marking material.

Notes:
Type of housing: Polycarbonate fiber reinforced PC-F, color: green or black.

ST-OV 4-24DC/24DC/...-PRO power protection circuit solid-state relay with signal logic

The ST-OV 4-...PRO provides protection and monitoring functions that are otherwise only known from thermomagnetic protection elements.

The PROtect modules have the following features:

- Fast disconnection with short-circuits and simultaneous current limitation
- Time-dependent overload shutdown for reliable protection against continuous overloads
- Brief inrush peaks are ignored
- After an overload or short-circuit has been triggered, a defined reset of the control voltage must be carried out
- Reliable recognition and indication of a line break on the load side
- Feedback in the event of an error

Electronic sensor terminal block for NAMUR proximity sensors

- The EIK 1-SVN 24-P electronic sensor terminal block from Phoenix Contact converts the changeable resistance of a NAMUR sensor unit into a digital signal that can be read by all PLCs.
- Monitoring of initiator side for short circuits or strand breaks
 - Suitable resistance circuit to enable monitoring of mechanical switches (see application 2)
 - LED error display
 - Status display (high signal) via green LED
 - 24 V/50 mA digital output
 - Bridging and marking with standard terminal accessories.

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.

Connection examples:

Relay modules

Special relays and solid-state relays

Hybrid relay modules

With its integrated transistor level, the hybrid relay module is able to amplify weak input signals. This serves as the basis for reliable relay operation.

The advantages:

- Low control current (terminal B), type-dependent as of 0.5 mA
- Type-dependent positive or negative control current
- Integrated input and interference suppression circuit
- Safe isolation according to DIN EN 50178 between coil and contact

Notes:
Type of housing: Polycarbonate fiber reinforced PC-F, color: green.
Marking systems and mounting material See Catalog 5
For the protection of relay coils and contacts, inductive loads must be dampened with an efficient protection circuit.

System cabling for controllers

Wiring I/O modules with individual wires is an extremely time-consuming process. Wiring errors and tedious troubleshooting cannot be ruled out.

Interface cabling reduces assembly costs by using plug-in components to carry out wiring quickly, clearly, and without errors.

The new interface modules in the VIP - VARIOFACE Professional series, which feature a modern housing design, offer the following advantages:

- Space-saving
- Vibration resistant up to 5g thanks to metal feet
- Reliable connection technology, either with screw or push-in connections
- Wide range of marking options

VIP modules are available for both product segments:

VARIOFACE system cabling is a cabling concept that has been specially developed to allow connection to the I/O modules of a wide range of automation devices.

The VIP series is rounded off by new front adapters with encapsulated system cables for the SIMATIC S7 300.

VARIOFACE wiring interfaces are suitable for universal use. Various VIP - VARIOFACE Professional modules with a 1:1 connection from a high-position plug-in connector to a different connection technology are available. The encapsulated system cables provide an effective and efficient means of establishing a connection to a control device with protection against polarity reversal.

A variety of potential distributors are available for splitting the control and operating voltage.

A large part of the costs incurred in automation systems today results from the cabling for the actuators and signaling units. On top of this, machines and systems are becoming more and more complex, which means that the cabling costs for the input and output stations are also steadily on the increase. In addition to cabling material costs, the costs associated with planning, assembly, startup, and documentation must also be considered.

VARIOFACE system cabling is a system concept that reduces manufacturing costs through fast, error-free, and uniform wiring of the input and output signals of a PLC.

The system design comprises three components:

- VARIOFACE front adapters
- VARIOFACE system cables
- VARIOFACE termination board

VARIOFACE system cabling is available for controllers from:

- **ABB**
- **Allen-Bradley**
- **Emerson**
- **Honeywell**
- **GE Fanuc**
- **Mitsubishi Electric**
- **OMRON**
- **Schneider Electric**
- **Siemens**
- **Yokogawa**
- **Phoenix Contact**

VIP - VARIOFACE Professional

The new front adapters with encapsulated system cables for the S7 300 and new compact termination boards make the system cabling even more robust. VARIOFACE Professional means:

- New front adapters
- **Optimized housing concept**
- **Power supplied via PCB terminal blocks**
- **Plug-in bridges for electrical isolation**
- **Directly connected system cables with encapsulated plugs**
- New termination boards
- **Space saving**
- **Vibration resistant up to 5g**
- **Optional marking**
- **New housing design**

The conventional wiring of input and output cards of programmable logic controls requires a lot of time.

Signals are transferred from the control system to modular terminal blocks or coupling modules such as relays or optocouplers by means of single conductor wiring.

This requires a complex wiring process. At the same time, errors in wiring are always possible with this connection method. Wiring errors are often only noticed when the system is put into operation and they then cause additional costs.

Wiring with the system cabling considerably reduces the assembly time and guarantees protection against polarity reversal.

Front adapters with an integrated pin strip (IEC 60603-13) are plugged onto the PLC I/O cards. They replace connection technologies such as those involving a screw or crimp connection.

The controller boards are simply snapped onto the DIN rail instead of modular terminal blocks or coupling modules. On the control side they also have a multi-position pin strip.

The controller boards are connected to the front adapters using multi-position and pre-assembled system cables.

Actuators and sensors from the field level are connected to the termination boards by means of screw or spring-cage connections or knife disconnect terminal blocks. The termination boards are marked on the field side according to the application, so that the signals can be clearly assigned.

The configuration cross-reference list (a quick reference guide to the VARIOFACE system components) is extremely useful when selecting the required components. What's more, matching components can be configured using the INTERFACE search assistant.

See www.phoenixcontact.net/products.

Rationalize your application with the aid of VARIOFACE system cabling:

- **Easy planning with configuration cross-reference list or online selector**
- **Cost reductions thanks to time-saving wiring**
- **Fault minimization through protection against polarity reversal**
- **Easy maintenance thanks to modular system components**

ABB S800 I/O Termination boards with knife disconnection

The ABB S800 I/O system offers the possibility of realizing the process wiring with D-SUB plug-in connectors. ABB TU 812 Compact MTU are available for this purpose.

The FLKM-D25SUB/B/KDS3-MT/... modules are connected to the I/O modules using assembled D-SUB cables (refer to "System cables" chapter).

In addition to screw connection with knife disconnection for every channel and ABB S800-specific labeling, the modules have the following features:

- Eight negative terminals with knife disconnection (TU810)
- Eight positive terminals with knife disconnection (TU810/P)
- For each channel, there is a positive and negative terminal with knife disconnection (TU830)

Passive interface modules can also be used for signal transmission (e.g., VIP-3/SC/D25SUB/F, 2315188), see page 533.

ABB S800 I/O System cable

The ABB S800 I/O system offers the possibility of realizing the process wiring with D-SUB plug-in connectors. ABB TU 812 Compact MTU are available for this purpose.

The CABLE-D25SUB/B/2X14/.../TU812 system cables convert from a D-SUB socket strip to two flat-ribbon cable plugs. Therefore, all 8-channel controller boards of the system cabling can be connected to S800 I/O modules. Two controller boards are used per module.

The front adapters mean that pre-assembled system cables can be directly connected to I/O modules.

- The FLKM 14-PA-SLC500... adapters connect max. 2 x 8 channels via two 14-pos. system cables. Perfectly-fitting VARIOFACE termination boards with a variety of functions and connection possibilities round off this system concept.
- With the FLKM50-PA-SLC500 OUT/2A front adapters, the FLKM 50/16/SLC500 termination board and 50-pos. system cables, the VARIOFACE system cabling can also be coupled to the OA16 and OW16 power output cards.

Notes:

Suitable system cabling components can be configured in the INTERFACE search wizard. See www.phoenixcontact.net/products

System cabling for controllers

VARIOFACE system cabling

Allen-Bradley SLC 500 System cable for 32 channels

The 32-channel I/O cards of the SLC 500 are connected using 40-pos. plug-in connectors (already integrated into the I/O modules). Passive interface modules (-3/SC/FLK40, etc.) are connected to the I/O cards using the **FLK 40/EZ-DR/.../SLC** system cables.

32 channels are split into 4x8 channels using the **FLK 40/4X14/EZ-DR/...** system cables.

The following 8-channel system cabling modules can be coupled:

- OB32 and IB32
passive and active modules plus V8 adapter
- OV32 and IV32
passive modules without status indicator

Notes:
Suitable system cabling components can be configured in the INTERFACE search wizard. See www.phoenixcontact.net/products

VARIOFACE system cabling

Emerson DeltaV System cable

The DeltaV system allows you to install the process wiring through “Mass termination blocks” (MTB) using flat-ribbon cable connectors. Besides the 10-, 16-, and 20-pos. system cables of system cabling (refer to the System cables chapter), the following system-specific lines are also available:

- **FLK 16/14/DV-OUT/...**, for digital assemblies with 16-pos. MTB for connection to PLC-INTERFACE
- **FLK 16/14/DV-IN/...**, for digital assemblies with 16-pos. MTB for connection to PLC-INTERFACE
- **FLK 20/2FLK14/EZ-DR/...**, for digital assemblies with 40-pos. MTB for connection to PLC-INTERFACE
- **FLK 16/24/DV-AI/EZ-DR/...**, for analog assemblies with 24-pos. MTB
- **FLK 50/2FLK20/EZ-DR/.../DV** system cables are specifically designed for 32-channel I/O modules with 40-pin MTB for the purpose of connecting I/O modules to 32-channel VARIOFACE interface modules

VARIOFACE front adapter, for 90-30 series, max. 2 x 8 channels can be connected, digital output | 14

VARIOFACE front adapter, for 90-30 series, max. 2 x 8 channels can be connected, digital input | 14

Type	Order No.	Pcs. / Pkt.
FLKM 14-PA/GE/DO	2290009	2
FLKM 14-PA/GE/DI	2290038	5

Card type | FLKM 14-PA/GE/DI

Digital input
IC 693 MDL 241
IC 693 MDL 634
IC 693 MDL 645
IC 693 MDL 646

Connection scheme FLKM 14-PA/GE/DO

Connection scheme FLKM 14-PA/GE/DI

* Only in conjunction with VIP-2/SC/2FLK14(1-20)/S7, Order No.: 2315230 and UM 45-2FLK14/ZFKDS/S7, Order No.: 2965156. All wire bridges (DR) on the adapter must be disconnected. There must be no voltage supply at the front adapter (flowing via the slip-on connections)!

Explanation:

- Flat-ribbon cable strip
- Connection to I/O card
- Screw terminal blocks for separate supply

System cabling for controllers

VARIOFACE system cabling

Honeywell C300, Series C I/O Front adapters

The front adapters mean that pre-assembled system cables can be directly connected to I/O modules.

FLKM-PA-D37/HW/DIO/C300

- Front adapter with D-SUB plug-in connector
- Connection of a maximum of 16 digital channels
- Specifically for digital I/O cards

FLKM-PA-D37/HW/AN/C300

- Front adapter with D-SUB plug-in connector
- Connection of analog modules

FLKM-PA-2D15/HW/.../C300

- Front adapter with two 15-pos. D-SUB plug-in connectors
- Connection of a maximum of 2 x 8 digital inputs/outputs per adapter
- Specifically for connecting PLC-V8/D15.../OUT or PLC-V8/D15.../IN

Notes:

For matching system cable fitted with D-SUB socket strip at both ends, see page 513

Honeywell C300 front adapter

Phoenix Contact Axioline real-time I/O System cables

These cables have been specifically developed for connecting VARIOFACE termination boards to the Axioline realtime I/O system. The push-in technology on the I/O system ensures rapid connection.

The cables have the following features:

- 1:1 connection
- 14-pos. plug-in connector, molded
- 8 pre-assembled open ends, for connection to the Axioline realtime I/O system
- Transmission of groups of 8 channels
- Labeling field on plug

Perfectly-fitting VARIOFACE termination boards round off this system concept.

System cable for 8 channels

Notes:
 The following modules cannot be coupled due to the larger outer contour of the molded connectors:
 UM 45-FLK14/ 8IM/ZFKDS/PLC, 2965211
 UM 45- 8RM/MR-G24/1/PLC, 2962900

System cabling for controllers

VARIOFACE system cabling

Phoenix Contact Inline Front adapters

The front adapters are used to connect pre-assembled system cables directly to In-line. Front adapters are simply plugged into the relevant Inline modules. Three connection options are available:

- Transfer of 8 channels via a 14-pos. system cable
 - Transmission of 2 x 8 channels over two 14-pos. system cables
 - Transmission of 4 x 8 channels over four 14-pos. system cables
- Perfectly-fitting VARIOFACE termination boards round off this system concept.

Notes:
Suitable system cabling components can be configured in the INTERFACE search wizard. See www.phoenixcontact.net/products

System cabling for controllers

VARIOFACE system cabling

VIP – VARIOFACE Professional front adapters for SIMATIC S7-300

Three connection options are available:

- Transfer of max. 32 channels via two 50-pos. system cables (32-channel cards or this design)
- Transfer of 4 x 8 channels via two 14-pos. system cables (32-channel cards or this design)
- Transfer of 2 x 8 channels via two 14-pos. system cables (16-channel cards or this design)

The front adapters have the following features:

- Can be screwed with I/O module
- Voltage supply via terminal blocks with spring-cage double connection
- Encapsulated socket strips for module side
Special lengths can be configured using separate order numbers.

Ordering example:

A front adapter with a connected 50-pos. system cable (32-channel cards), 12.75 m in length:

1 pcs. 2900885/12,75

Notes:
The following modules cannot be coupled due to the larger outer contour of the molded connectors: UM 45-FLK14/ 8IM/ZFKDS/PLC, 2965211 UM 45-FLK50/32IM/ZFKDS/PLC, 2965224 UM 45- 8RM/MR-G24/1/PLC, 2962900 UM 45-16RM/MR-G24/1/PLC, 2962913
Suitable system cabling components can be configured in the INTERFACE search wizard. See www.phoenixcontact.net/products

All bridges (BR) on the adapter must be disconnected.

Note:
The front adapters are non-isolated on delivery.
Removal of the bridges can achieve electrical isolation (in groups of 8).

Explanation:

 Flat-ribbon cable strip
 Connection to I/O card

SP: Separate power terminals
BRbl: Blue plug-in bridge
BRrd: Red plug-in bridge

System cabling for controllers

VARIOFACE system cabling

Siemens SIMATIC® S7-300 Front adapter

I/O modules with 32 channels or with this design

There are two connection possibilities available:

- Transfer of max. 32 channels over one 50-pos. system cable
- Transmission of 4 x 8 channels over four 14-pos. system cables

Perfectly-fitting VARIOFACE termination boards with a variety of functions and connection possibilities round off this system concept.

Notes:

Suitable system cabling components can be configured in the INTERFACE search wizard. See www.phoenixcontact.net/products

Front adapter for SIMATIC® S7-300, I/O cards with max. 32 channels

Technical data

Max. perm. operating voltage	< 50 V AC / 60 V DC
Max. permissible current	1 A (per path) 8 A (per connection, supply via separate power supply (2.8 x 0.8 mm))
Max. perm. total current	2 A (Per Byte, for supply via connector) 8 A (during supply via a separate bridged power supply)
Ambient temperature (operation)	-20°C ... 50°C
Ambient temperature (storage/transport)	-20°C ... 70°C
Standards/regulations	IEC 60664 / IEC 60664 / IEC 60664
Connection method	IDC/FLK pin strip (2.54 mm)

CPU	313C, 314C, 313C-2PiP 313C-2DP, 314C-2DP, 314C-2PiP

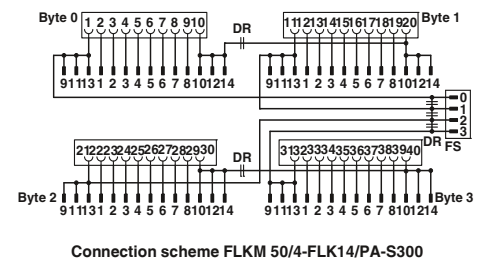

* Only in conjunction with VIP-2/SC/FLK50 (1-40)/S7, Order No.: 2315243, UM 45-FLK50/ZFKDS/S7-300, Order No.: 2968111, FLKM 50/KDS3-MT/PPA/S7-300, Order No.: 2304490. All wire bridges (DR) on the adapter must be disconnected! There must be no voltage supply at the front adapter (flowing via the slip-on connections)!

Note:

The front adapters are non-isolated on delivery. Removal of the bridges can achieve electrical isolation (in groups of 8).

Explanation:

- Flat-ribbon cable strip
- Connection to I/O card
- Screw terminal blocks for separate supply

Siemens SIMATIC® S7-300
Front adapter

I/O modules with 16 channels or with this design

– Up to 2 x 8 channels are connected via two 14-pos. system cables.

Perfectly-fitting VARIOFACE termination boards with a variety of functions and connection possibilities round off this system concept.

Notes:
Suitable system cabling components can be configured in the INTERFACE search wizard. See www.phoenixcontact.net/products

Front adapter for SIMATIC® S7-300, I/O cards with max. 16 channels

Technical data

Max. perm. operating voltage	< 50 V AC / 60 V DC
Max. permissible current	1 A (per path) 8 A (per connection, supply via separate power supply (2.8 x 0.8 mm))
Max. perm. total current	2 A (Per Byte, for supply via connector) 8 A (during supply via a separate bridged power supply)
Ambient temperature (operation)	-20°C ... 50°C
Ambient temperature (storage/transport)	-20°C ... 70°C
Standards/regulations	IEC 60664 / IEC 60664 / IEC 60664
Connection method	IDC/FLK pin strip (2.54 mm)

Siemens SIMATIC® S7-300 Front adapter for MINI MCR

This front adapter is used exclusively for coupling the MINI MCR-SL-V8-FLK 16 A adapter. Changed analog standard signals can be transmitted with the help of these components.

Suitable isolators can be seen from page 66.

For suitable 16-pos. system cable (FLK 16/EZ-DR/...), refer to page 506.

Assembled round cable, with two 16-pos. socket strips

System adapter, for MINI analog modules with screw connection

FLKM 16-PA-S300/MINI-MCR connection scheme

Explanation:

- Flat-ribbon cable strip
- Connection to I/O card
- Screw terminal blocks for separate supply

Siemens SIMATIC® S7-300 Front adapter for MINI analog system cabling

The FLKM 16-PA-331-1KF//MINI-MCR front adapter is used for implementing system cabling in conjunction with the MINI Analog system adapter and a 16-pos. system cable FLK 16/EZ-DR/.../KONFEK; refer to page 506.

Instead of the conventional front plug, screw terminal blocks are used to snap this component onto the analog module.

The DIP switches can be used to connect "M-" connections to each other and to the central ground of the system.

The front adapter supports **only current signals**.

The front adapter is suitable for the following analog input card:

– 6ES7 331-1KF02-0AB0

Max. perm. operating voltage
Max. permissible current
Rated surge voltage / insulation
Ambient temperature (operation)
Ambient temperature (storage/transport)

VARIOFACE system cabling

Siemens SIMATIC® S7-1500 System cables for front plugs from the “TOP connect” series

These system cables are connected directly to Siemens “SIMATIC TOP connect” front plugs. A VARIOFACE front adapter is not required. The cables can be used to connect existing 8-channel Phoenix Contact termination boards.

- For passive signal transmission, e.g., VIP-2/SC/FLK14/PLC; Order No. 2315214, see page 470.
- For relay or solid-state relay connection via V8 adapters, e.g., PLC-V8/FLK14/OUT; Order No. 2295554, see page 369.

The system cables are available in the following versions:

- Unshielded
- Shielded
- Halogen-free
- Encapsulated plug-in connector

Details regarding assignment to Siemens modules are provided with the system cable order numbers at www.phoenixcontact.net/products.

Encapsulated 14-pos. plug-in connector:

Note:
The following modules cannot be coupled due to the larger outer contour of the molded 14-pos. plug-in connector:
UM 45-FLK14/ 8IM/ZFKDS/PLC, 2965211
UM 45- 8RM/MR-G24/1/PLC, 2962900

Ordering example for unshielded round cable:
Unshielded round cable, assembled with one 14-pos. and one 16-pos. socket strip, 12.70 m long
Type: FLK EZ-DR /14U/C52/...

Quantity	Order No.	Length [m] ¹⁾
1	2295059/14U/C52	12.70

¹⁾ Min. 0.20 m

14U ≙ 14-pos. unshielded cable
C52 ≙ S7-1500 assembly with 14-pos. socket strip at one end and 16-pos. socket strip at the other

Ordering example for shielded round cable:
Unshielded round cable, assembled with one 14-pos. and one 16-pos. socket strip, 13.20 m long
Type: FLK EZ-DR-S /14S/C52/...

Quantity	Order No.	Length [m] ¹⁾
1	2295046/14S/C52	13.20

¹⁾ Min. 0.20 m

14S ≙ 14-pos. shielded cable
C52 ≙ S7-1500 assembly with 14-pos. socket strip at one end and 16-pos. socket strip at the other

Ordering example for halogen-free round cable:
Halogen-free round cable, assembled with one 14-pos. and one 16-pos. socket strip, 15.50 m long
Type: FLK 14-16-EZ-DR-HF-S7/...

Quantity	Order No.	Length [m] ¹⁾
1	2295693	15.50

¹⁾ Min. 0.20 m

System cabling for controllers

VARIOFACE system cabling

Siemens SIMATIC® S7-400 Front adapter

The front adapters mean that pre-assembled system cables can be directly connected to I/O modules.

FLKM 50-PA-S400

– Transmission of max. 32 digital channels over one 50-pos. system cable.

FLKM 50/4-FLK14/PA-S400

– Transmission of max. 32 digital channels via one 14-pos. system cable.

Perfectly-fitting VARIOFACE termination boards with a variety of functions and connection possibilities round off this system concept.

FLKM 50-PA-S400 (3-48)

– Analog channels are connected via a 50-pos. system cable.

The 1:1 connection of the adapter means that corresponding 1:1 interface modules are connected here

Front adapter for SIMATIC® S7-400

Technical data

Max. perm. operating voltage	< 50 V AC / 60 V DC
Max. permissible current	1 A (per path) 8 A (per connection, supply via separate power supply)
Max. perm. total current	2 A (Per Byte, for supply via connector) 8 A (during supply via a separate bridged power supply)

Siemens SIMATIC® S7-400 Adapter for conversion from S5-135/155 to S7-400

The FLKM S135/... adapters connect a SIMATIC® S5 connector wired with individual conductors directly to the SIMATIC® S7-400 basic card.

The SIMATIC® S5 connector is plugged directly onto an S7-400-I/O card with the help of an FFLKM S135/... intermediate adapter.

A new SIMATIC® S7-400 is installed in place of the SIMATIC® S5. The existing field wiring remains intact.

Attention:

The LEDs of the S7-400 module are hidden.

**Siemens SIMATIC® S7-300
Adapter for conversion from
S5-135/155 to S7-300**

S5-S7 adapters connect the S5-135 front adapters wired with individual wires to the I/O modules of the S7.

With the help of the FLKM S135/S7/FLK50 converter module, the signals of the S5-135 front adapter can be converted to a 50-pos. strip. A 50-pos. system cable FLK 50/EZ-DR/.../KONFEK and a front adapter for the SIMATIC® S7 (FLKM 50-PA-S300) now connect the signals with the I/O module.

Converter for Siemens SIMATIC® S5-135 to 50-pos. FLK strip.

Notes:
Due to the geometry, it is not possible to couple any molded FLK connectors (e.g., VIP-PA...S7).

FLKM S135/S7/FLK50/PLC	2314736	1

Startup adapter for extending the existing S5-135/155 field wiring.

All signals of the existing S5-135 wiring 3 or 5 are extended with the help of the universal commissioning adapters. The open cable end can be connected to various controllers such as S7-400 or S7-300. This means that the existing field wiring of S5-135 can communicate with the new controller for test purposes. Since the new control unit is temporarily arranged before the control cabinet, the original status of the system can be restored if required.

If the system functions with the new controller without problems, the S5-135 can now be replaced.

Description
Connection of all S5-115 connections (1 to 23, 25 to 47) at the open cable end

System cabling for controllers

VARIOFACE system cabling

YOKOGAWA Centum CS3000 R3 System cable

These shielded system cables for digital (50-pos.) and analog (40-pos.) I/O modules are connected directly to the modules. An intermediate adapter is not required. Features:

- Molded plug-in connector
- Can be screwed
- Lateral cable outlet of the I/O module
- KS/AKB-compatible plug-in connectors on the module side

			Technical data		
Max. perm. operating voltage			30 V DC

YOKOGAWA Centum CS3000 R3 System cable for MINI analog system cabling

The Yokogawa **CABLE-40/2FLK16/.../YUC** system cable makes it possible to connect 16 MINI analog modules to a Yokogawa control system. In conjunction with two MINI analog MINI MCR-SL-V8-FLK-16-A system adapters, the Yokogawa system cable provides a simple and economical “Plug and Play” solution.

The system cable is plugged directly into the Yokogawa module. Two 16-pos. flat-ribbon cable plug-in connectors are provided for connecting the module to the MINI analog system adapters.

The system cable in conjunction with **4-conductor measuring transducers** is suitable for the following analog cards:

- AAI 141
- AAI 143

		Technical data

YOKOGAWA Centum CS3000 R3 Controller boards

These modules are connected to the analog I/O modules through the 40-pos. YUC system cable.

The modules are designed for redundant signal transmission (two plug-in connectors in parallel). A separate connection to the HART multiplexer is possible.

FLKM-KS40/AO16/YCS

– For analog module AAI 543

FLKMS-KS40/SI/AI16/YCS

– For analog modules AAI 141 and AAI 143 (operation of modules in the 4-conductor mode)

- Transfer of 16 channels with separate positive and negative connections
- 16 plug-in fuses (IEC 127-2, 5 x 20, 0.1 A) per positive supply and LED status indicator
- Redundant voltage supply (fuse IEC 127-2, 5 x 20, 2 A)

FLKMS-KS40/AI/YCS

– For analog modules AAI 141 and AAI 143 (operation of modules in the 4-conductor mode)

- Transfer of 16 channels with separate positive and negative connections
- Redundant voltage supply (fuse IEC 127-2, 5 x 20, 2 A)

System cabling for controllers

VARIOFACE system cabling

VIP termination boards for Siemens SIMATIC® S7-300

These VIP - VARIOFACE Professional modules are used in combination with two 14-pos. system cables and the relevant front adapters for Siemens SIMATIC® S7-300.

Features:

- Numerical labeling (1-20)
- Specifically for S7 300.

Notes:
For marking systems (e.g., "ZB 22:UNBEDRUCKT"; Order No, 0811862) and mounting material, see Catalog 5.

Termination boards with 2-conductor connection technology for 32 channels

These VARIOFACE modules are used in combination with 50-pos. system cables and the relevant front adapters.

The following module types with 2-conductor connection technology are available:

FLKM 50/32M/PLC

- Byte-wise labeling
- For digital I/O modules
- Negative connection for each signal.

FLKM 50/32P/PLC

- Byte-wise labeling
- For digital I/O modules
- Positive connection per signal.

Passive interface modules with screw connection

VARIOFACE interface module , same as before, however, for SIMATIC S7-400 with SIMATIC-specific labeling (3-48)	50	259 mm

Simulation module with switches

These VARIOFACE modules enable simple simulation of the control and peripheral hardware for 8 signals.

The UM 45-DI/DO/S/LA/SIM8 switch module is assembled for signal transmission with COMBICON screw connector for single-conductor wiring. Alternatively, connection to the PLC system cabling is established through a 14-pos. flat-ribbon cable pin strip. Connection to the front adapters of the PLC system cabling is established through 14-pos. system cables with socket strips.

Each signal path is allocated an LED which signals the "high active" signal state. The supply voltage to the modules is signaled via a green LED.

Notes:
Type of housing: Terminal blocks: Polyamide PA non-reinforced, color: green. Housing: PVC
Marking systems and mounting material See Catalog 5

Max. perm. operating voltage	24 V DC
Max. perm. current (per branch)	1 A
Max total current (voltage supply)	8 A (+, - terminal block)
Rated surge voltage	0.8 kV
Ambient temperature (operation)	-20°C ... 50°C
Mounting position	Any
Standards/regulations	IEC 60664, DIN EN 50178, IEC 62103
Connection data solid / stranded / AWG	0.14 ... 1.5 mm ² / 0.14 ... 1.5 mm ² / 28 - 16
Dimensions	45 mm / 51 mm

VARIOFACE system cabling

Adapter for PLC-INTERFACE (6.2 mm)

PLC-V8/... are the VARIOFACE adapters connecting the eight slim 6.2 mm PLC-INTERFACE modules to the VARIOFACE system cabling:

- Can be plugged into the bridge shafts of eight aligned PLC-INTERFACE modules
- Freely definable configuration with relays, optocouplers, and passive feed-through terminal blocks
- With D-SUB connection as an option for universal connections

Notes:
For cross-reference list with matching PLC-INTERFACE modules, see page 488

VARIOFACE system cabling

Feed-through terminal blocks for PLC-INTERFACE

The VARIOFACE PLC-VT terminals are passive feed-through terminal blocks, with the same shape as the 6.2 mm slim relay and PLC-INTERFACE optocoupler interfaces. This makes it possible to implement 8-channel interface blocks for the system cabling, which can be adapted to a bit for the particular application. For individual requirements, the relay, optocoupler or the PLC-VT terminal blocks for passive signal transmission can be combined as needed.

PLC-VT PLC-VT/LA

- Can be combined with PLC-INTERFACE universal series
- Signal path with additional potential level for free assignment (two-conductor connection)
- Optionally with LED

PLC universal series

The universal series of products can be used as either input or output interfaces. Each product consists of a basic terminal block with a plug-in miniature relay (PDT contact) or a plug-in solid-state relay.

PLC actuator series

When used as an interface between the PLC and actuators, such as motors, contactors or solenoid valves, only one N/O contact function is normally required. In such cases, the PLC...ACT output interface is used. All actuator connections, including the load return line, are connected directly. This eliminates the need for additional output terminal blocks.

PLC sensor series

When used as an interface between the PLC and sensors, such as proximity switches, limit switches or auxiliary contacts, only one N/O contact function is normally required. In such cases, the PLC...SEN input interface is used. All sensor connections, including the supply voltage for the sensors/switches, are connected directly. This eliminates the need for additional modular terminal blocks.

System cabling for controllers

VARIOFACE system cabling

COMPACT-LINE output modules with relays, one N/O contact

These VARIOFACE Compact Line output modules are used in combination with the respective front adapters.

Like the front adapters, the modules are connected via 14-pos. or 50-pos. system cables. The following features characterize these relay modules:

- Plug-in miniature relays, each with an N/O contact
- Universal applications from 1 mA to 3 A continuous current through 2-layer double contact with hard gold plating
- Low construction height of only 45 mm
- LED status display for each signal path and supply voltage
- Freewheeling and reverse polarity protection diode for each signal path.

With the 32-channel version, the system cable is connected to the UM 45-16RM/MR-G24/1/PLC 16-channel base module.

The UM 45-16RM/MR-G24/1/E/PLC output extension module with a further 16 channels is coupled to the base module via a 20-pos. flat-ribbon cable (length: 10 cm).

Notes:

The connection cable between the base and the extension modules is delivered with the extension unit.

Due to the geometry, it is not possible to couple any molded FLK connectors (e.g., VIP-PA...S7).

Output module with eight miniature relays, 1 N/O contact

System cabling for controllers

VARIOFACE system cabling

Output module for relays

- 2 PDTs
- 1 PDT with disconnect terminal blocks

These VARIOFACE output modules are used in combination with the respective front adapters.

8 channels are controlled via 14-pos. cables. All modules feature the following:

- Plug-in miniature relays
- LED status indicator and freewheeling diode per signal path
- Supply voltage indicator (LED)
- Polarity protection diode

With the 32-channel version (1 PDT with knife disconnect terminal blocks), the 50-pos. system cable is connected to the base module with 16 channels.

The output extension module with a further 16 channels is coupled to the base module via a 20-pos. flat-ribbon cable (length: 10 cm).

Notes:

The connection cable between the base and the extension modules is delivered with the extension unit.

System cabling for controllers

VARIOFACE system cabling

Output modules with relays, 1 PDT with detectable manual operation

These VARIOFACE output modules are used in combination with the respective front adapters.

The modules are connected via a 14- or 50-pos. system cable. These relay modules offer the following features:

- Plug-in miniature relays each with a PDT contact and detectable manual operation
- Slim design width of just 92 mm (8 channels) or 285 mm (32 channels)
- LED status indicator and freewheeling diode per signal path (integrated in relay)
- Supply voltage indicator (LED)

Output module with 8 miniature relays, 1 PDT with detectable manual operation

Output module with 32 miniature relays, 1 PDT with detectable manual operation

Notes:
1) EMC: Class A product, see page 571

Technical data

Coil side	
Operating voltage U_N	24 V DC
Typ. input current at U_N	18 mA
Typ. response time at U_N	9 ms
Typ. release time at U_N	6 ms
Input circuit	Freewheeling diode (integrated in relay)
Status display/channel	Yellow LED (integrated in relay)
Connection method	Flat-ribbon cable plug-in connector according to IEC 60603-13
No. of pos.	14
Contact side	
Contact type	Single contact, 1-PDT
Contact material	AgNi
Max. switching voltage	250 V AC/DC
Min. switching voltage	12 V AC/DC
Limiting continuous current	5 A
Min. switching current	100 mA
Max. interrupting rating:	24 V DC 120 W 48 V DC 62 W 60 V DC 42 W 110 V DC 55 W 220 V DC 66 W 250 V AC 1250 VA
Connection method	Screw connection
Connection data solid / stranded / AWG	0.2 ... 4 mm ² / 0.2 ... 2.5 mm ² / 24 - 12
General data	
Rated insulation voltage	260 V AC
Rated surge voltage	4 kV
Pollution degree / Surge voltage category	2 / III
Ambient temperature (operation)	-20°C ... 50°C
Nominal operating mode	100% operating factor
Mechanical service life	5 x 10 ⁶ cycles
Standards/regulations	DIN EN 50178
Mounting position	Any
Mounting	In rows with zero spacing
Dimensions	111 mm / 64 mm

**Output modules with relays,
1 PDT with or without manual
operation and fuses**

These VARIOFACE output modules are used in combination with the respective front adapters.

The modules are connected via a 14-pos. system cable. These relay modules offer the following features:

- Plug-in miniature relays each with a PDT contact with or without manual operation
- Fuse per output circuit as short-circuit protection
- Slim design width of just 127 mm
- LED status indicator and freewheeling diode per signal path
- Supply voltage indicator (LED)
- Polarity protection diode

**Output module with 8 miniature relays,
1 PDT and fuse per output circuit**

**Output module with 8 miniature relays,
1 PDT with detectable manual operation
and fuse per output circuit**

System cabling for controllers

VARIOFACE system cabling

VIP – VARIOFACE Professional system cables with flat-ribbon connectors

- 1:1 connection
- 10- to 20-pos.
- Plug-in connectors as per IEC 60603-13
- In the desired lengths
- Individual serial number

Note:

Due to the enlarged outer contour of the molded plug-in connectors, module types with UM45 profile and three-level terminal blocks cannot be connected with the VIP-CAB-FLK... system cable.

The following module types (10- to 50-pos.) can be connected.

For example, for 20 positions:

- VIP-2/SC/FLK 20
- VIP-2/SC/FLK20/LED
- FLKM 20/ZFKDS
- UM45-FLK 20/ZFKDS

(double-level connection)

The VIP-CAB-FLK... system cables are not suitable for front adapters (see the dimensional drawing).

not shielded

System cable with a flat-ribbon cable plug-in connector and an open end

- 1:1 connection
- 20- and 50-pos.
- Plug-in connectors as per IEC 60603-13
- Open end at the other end

The individual wires at the open end are labeled (1, 2, 3, 4, ...) and equipped with a ferrule.

Notes:
In the case of molded connectors, please observe the dimensional drawing and note, see page 500

System cabling for controllers

VARIOFACE system cabling

System cable with flat-ribbon cable plug-in connector

Standard lengths

Round cable sets are used to connect the PLC front adapters to the corresponding VARIOFACE controller boards.

The following versions are available with 14 and 50 positions:

- Not shielded
- Shielded
- Halogen-free

Plug-in connector strips are fitted on both sides of the cables in accordance with IEC 60603-13/DIN 41651 (1:1 connection).

In case of shielded cables, a cable end with a ferrule is additionally provided as a shield connection (length: approx. 0.5 m; cable H05V-K 1 mm², black).

Special lengths are defined using an order key, refer to page 510.

System cable with flat-ribbon cable plug-in connector

Standard lengths

Round cable sets are used to connect the PLC front adapters to the corresponding VARIOFACE controller boards.

Plug-in connector strips are fitted on both sides of the cables in accordance with IEC 60603-13/DIN 41651 (1:1 connection).

Special lengths are defined using an order key, refer to page 510.

not shielded

Technical data

1) Socket strips assembled straight at both ends.

2) Socket strips assembled straight at one end and angled at the other.

System cabling for controllers

VARIOFACE system cabling

System cable with flat-ribbon cable plug-in connector

The FLK 50... types are plugged onto the VARIOFACE front adapters for 32 channels and make it possible to split the channels into 4 x 8 channels. All 8-channel VARIOFACE modules and the PLC-V8 adapters for PLC-INTERFACE can therefore be connected.

In case of shielded cables, a cable end with a ferrule is additionally provided as a shield connection (length: approx. 0.5 m; cable H05V-K 1 mm², black).

Splitting cable unshielded
50 positions on 4 x 14

Splitting cable shielded

System cabling for controllers

VARIOFACE system cabling

System cable with flat-ribbon cable plug-in connector

Special lengths

Pre-assembled **round cables** for connecting, e.g., PLC front adapters to the corresponding VARIOFACE termination boards. The cables are assembled with plug-in connector strips at both ends according to IEC 60603-13/DIN 41651. For shielded cables, a cable end with ferrule is available additionally as a shielded connection (length: approx. 0.5 m; cable: H05V-K 1 mm², black).

The order key for special lengths is described using three features.

The order of the features is as follows:

- Cable type
- Assembly
- Length in meters

There are two order keys, one for unshielded round cables, FLK EZ-DR/.../.../..., and one

for shielded round cables, FLK EZ-DR-S/.../.../.... To ensure clear specification when ordering, the features are described in detail below:

Cable type

- This specifies the number of individual cables within the specific cable.

Assembly

- None, the cable is not assembled at either end;
- 10-pos. socket strip at both ends, the cable is assembled with 10-pos. plug-in connectors at both ends (1:1 connection);
- 14-pos. socket strip at both ends, the cable is assembled with 14-pos. plug-in connectors at both ends

- (1:1 connection); and so on up to
- 50-pos. socket strip at both ends, the cable is assembled with 50-pos. plug-in connectors at both ends (1:1 connection);
- 14-pos. socket strip at one end, 16-pos. socket strip at one end, the cable is assembled with a 14-pos. plug-in connector at one end and a 16-pos. plug-in connector at the other end (for SIMATIC S7; no 1:1 connection).

Features of permissible assemblies:

Cable type \ Assembly	Unshielded round cables FLK EZ-DR/.../.../...							Shielded round cables FLK EZ-DR-S/.../.../....				
	10-pos.	14-pos.	16-pos.	20-pos.	26-pos.	34-pos.	40-pos.	50-pos.	14-pos.	16-pos.	40-pos.	50-pos.
No assembly	10U/C00/...	14U/C00/...	16U/C00/...	20U/C00/...	26U/C00/...	34U/C00/...	40U/C00/...	50U/C00/...	14S/C00/...	16S/C00/...	40S/C00/...	50S/C00/...
10-pos. socket strip at both ends	10U/C55/... ¹⁾											
14-pos. socket strip at both ends		14U/C23/... ¹⁾							14S/C23/... ¹⁾			
16-pos. socket strip at both ends			16U/C58/... ¹⁾							16S/C58/... ¹⁾		
20-pos. socket strip at both ends				20U/C61/... ¹⁾								
26-pos. socket strip at both ends					26U/C63/... ¹⁾							
34-pos. socket strip at both ends						34U/C65/... ¹⁾						
40-pos. socket strip at both ends							40U/C30/... ²⁾				40S/C30/... ²⁾	
50-pos. socket strip at both ends								50U/C38/... ²⁾				50S/C38/... ²⁾
14-pos. socket strip at one end; 16-pos. socket strip at one end		14U/C52/... ¹⁾							14S/C52/... ¹⁾			

¹⁾ Socket strips assembled straight at both ends.

²⁾ Socket strips assembled straight at one end and angled at the other.

³⁾ Socket strips assembled straight at one end and angled at the other.

Ordering example for unshielded round cable:

System cabling for controllers

VARIOFACE system cabling

System cable with D-SUB socket and pin strip

Standard lengths

Shielded round cable sets to connect the control level with the corresponding VARIOFACE interface modules.

Assembly with D-SUB strips as per IEC 60807-2/DIN 41652, (1:1 connection).

- D-SUB socket strip on one side and D-SUB pin strip on the other
- D-SUB sockets on both sides
- D-SUB pin strips on both sides
- Cable exit: straight
- Screw connection: 2 UNC 4-40 screws.

Special lengths and assembly versions are defined using an order key, refer to page 514.

System cabling for controllers

VARIOFACE system cabling

System cable with D-SUB sockets and pin strip

Special lengths

Pre-assembled shielded **round cables** for connecting VARIOFACE termination boards. The cables are assembled with D-SUB strips in accordance with IEC 60807-2/DIN 41652.

The order key is defined by three features.

The features in the appropriate sequence are:

- Cable type
- Assembly
- Length in meters

There are three assembly variants of the shielded round cable:

- CABLE D-SUB-S/.../.../... D-SUB socket strip on one end and D-SUB pin strip on the other
- CABLE D-SUB-B-B-S/.../.../... D-SUB

socket strip at both ends
 - CABLE D-SUB-S-S-S/.../.../... D-SUB pin strip at both ends
 The features necessary for clear identification of an order are described below:

Cable type

- The number of individual cables within the cable is defined here.

Assembly

- (example for CABLE D-SUB-S/.../.../...)
- None, the cable is not assembled at either end
- 9-pos. D-SUB socket strip at one end 9-pos. D-SUB pin strip at one end the cable connects (1:1) a 9-pos. D-SUB socket and pin strip

- 15-pos. D-SUB socket strip at one end 15-pos. D-SUB pin strip at one end the cable connects (1:1) a 15-pos. D-SUB socket and pin strip; or up to
- 50-pos. D-SUB socket strip at one end 50-pos. D-SUB pin strip at one end the cable connects (1:1) a 50-pos. D-SUB socket and pin strip.

Sample order for round cable set assembled with pin strip on one side and socket strip on one side

- unshielded 25-pos. round cable set, assembled with one 25-pos. D-SUB socket strip and one 25-pos. D-SUB pin strip, 11.5 mm long

System cable with a 56-pos. ELCO/EDAC plug-in connector and an open end

Assembled system cable for connecting 56-pos. EDAC plug-in connectors from the 516 series or ELCO plug-in connectors from the 8016 series.

- Single-sided 516 series EDAC socket plug-in connectors
- Metal housing with lateral cable outlet
- Coding sockets in location 1 by default
- Open end at the other end
- Single wire marking:
1, 2, 3, ... 53, 54, Y, Z (see pin assignment)
- Shield connection on both sides:
H05V-K 1 mm² cable, black, length: 0.5 m

56-pos. system cable

Notes:
The system cables are designed specifically for the UMK-EC56/56-XOR (2975900) and UMK-EC56/56-XOL (2975890) modules.
When using the UMK-EC56/FRONT 2,5V/R (2976161) or UMK-EC56/FRONT 2,5V/L (2976158) modules, the coding sockets must be adapted accordingly.
Observe the module and system cable layouts.

VIP – VARIOFACE Professional – secure and reliable connections in even the tightest of spaces

Space is extremely valuable in the control cabinet. That is why the I/O of automation devices feature high-position plug-in connectors. To enable the individual wires of the sensor/actuator level to be connected to the automation interface in accordance with industry requirements, Phoenix Contact is now able to offer new interface modules and new system cables inside a professional and compact housing design. Thanks to the encapsulated system cables, the control and process levels can be connected safely and reliably in harsh industrial environments.

To allow all components to be supplied with power, potential distributors are available with the same housing design.

VARIOFACE Professional means:

New modules:

- Space-saving
- Vibration resistant thanks to metal foot
- Optional marking
- New housing design

New FLK system cables:

- Encapsulated FLK plug-in connectors
- Professional strain relief
- Robust design

VIP - VARIOFACE Professional interface modules

Interface modules with various connection technologies and designs are available for the widely-used FLK, D-SUB, and high-density D-SUB plug-in connectors. Modules with a status indicator can be selected for operation monitoring purposes.

Interface module with ELCO or DIN plug-in connector

Modules with ELCO plug-in connectors exist for robust environments or where there are increased safety requirements.

Interface modules are also available for DIN strip types C, D, E, and F.

Relay/solid-state relay modules

The active modules are configured as a 4-channel, 8-channel, and 16-channel interface. Multi-channel modules exist for relay and signal/power optocouplers. These allow functions such as signal conditioning, electrical isolation, and power gain to be achieved.

System cables with encapsulated FLK or D-SUB plug-in connectors

Assembled FLK and D-SUB cables guarantee a reliable connection between the automation device and the module. 1 A (FLK cable) and 2 A (D-SUB cable) currents can be transmitted on each signal path thanks to the large conductor cross sections.

VIP - VARIOFACE Professional potential distributors

Designed for up to 250 V/30 V, the potential distributors can be used universally – for both operating voltage and control voltage distribution. Screw connections or spring-cage connection can be selected as required for the application.

VIP – VARIOFACE Professional Modules with flat-ribbon cable plug-in connectors

- 1:1 connection
 - 10- to 64-pos.
 - Screw connection
 - Metal foot
 - As per IEC 60603-13
 - Optional with status indicator
- Low and high engagement latches are supplied with all modules.

Notes:

For marking systems (e.g., "ZB 22:UNBEDRUCKT"; Order No. 0811862) and mounting material, see Catalog 5.

SLIM-LINE modules for flat-ribbon cable plug-in connectors

VARIOFACE SLIM-LINE modules connect flat-ribbon cable plug-in connectors in accordance with IEC 60603-13/DIN 41651 to front connection terminal blocks.

The modules are provided with low and high engagement latches to protect the flat-ribbon cable plug-in connector against being accidentally released.

Panel feed-through modules for flat-ribbon cable plug-in connectors

VARIOFACE DFLK... panel feed-through modules connect the flat-ribbon cable plug-in connectors in accordance with IEC 60603-13/DIN 41651 to the screw connection terminal blocks.

These modules are suitable for mounting on a side panel with an appropriate housing cutout (see dimensioning table).

The modules are provided with low and high engagement latches to protect the flat-ribbon cable plug-in connector against being accidentally released.

System cabling for controllers

VARIOFACE wiring interface

SLIM-LINE modules for D-subminiature plug-in connectors

These VARIOFACE modules connect D-SUB strips with front connection terminal blocks in accordance with IEC 60807-2/DIN 41652.

To make the ground connection, the metallic plug shell (4-40 UNC thread) makes contact with a connection terminal block.

VARIOFACE wiring interface

Modules for plug-in connectors IEC 60603/DIN 41612

These VARIOFACE interface modules connect high-position plug-in connectors according to IEC 60603/DIN 41612 to screw connection terminal blocks.

The following VARIOFACE modules are available:

- **UMK** modules with double-level connection terminal blocks
- **UMKS** modules with three-level connection terminal blocks.

Notes:
For suitable cable housings, see the table on page 562

**Design C,
64-position, a, c assembled**

System cabling for controllers

VARIOFACE wiring interface

Modules for ELCO plug-in connectors

Notes:
Dimensional drawings and pin assignments, see page 562

These modules can be used to connect ELCO plug-in connectors of the 8016 series to screw connection terminal blocks.

The diagonal position of the ELCO plug-in connector means that the wires leading out of the cable housing at the side can be led away without restricting neighboring modules.

38-pos.

VARIOFACE wiring interface

Modules for ELCO plug-in connectors for use in Ex i circuits

The VARIOFACE modules connect ELCO plug-in connectors of the 8016 series to screw connection terminal blocks. The modules for ELCO connectors can be used as simple electrical equipment for applications in intrinsically safe circuits as per EN 60079-14. They fulfill the requirements of intrinsic safety as per EN 60079-11 (EN 50020) and can be used for various intrinsically safe circuits taking into account the pin configuration.

The voltage of an intrinsically safe circuit may not exceed 30 V. The voltage difference between two intrinsically safe circuits can be up to 60 V.

The modules are equipped with blue screw connection methods are clear labeling for intrinsically safe circuits.

The arrangement of angled ELCO plug-in connectors makes it possible to lead the lines led out from the cable housing away from the adjacent modules without any negative effects.

For the disconnection of intrinsically safe and non-intrinsically safe circuits, a distance of at least 50 mm should be kept between the connection points using partition plates or spaces.

Notes:
Dimensional drawings and pin assignments, see page 563
Facts about explosion protection, see page 154

System cabling for controllers

VARIOFACE wiring interface

VARIOFACE modules for plug-in miniature relays and/or miniature solid-state relays

The UMK-... RM 4-, 8-, and 16-way relay or solid-state relay interfaces provide 4, 8 or 16 slots for standard electromechanical relays (REL-MR..., not REL-MR...MS) or optoelectronic relays (SIM-El...). The connections between the I/O module and the electronics, as well as the process cabling, are implemented via screw connection terminal blocks.

4-channel with bridge rectifier

4-channel for relays with a PDT contact

Notes:
For the protection of relay coils and contacts, inductive loads must be dampened with an efficient protection circuit.
Other input voltages on request.
1) not with 230 V AC.
2) with 230 V AC glow lamp.
3) with 100 V DC and 230 V AC glow lamp.

System cabling for controllers

VARIOFACE wiring interface

VARIOFACE modules as interface for plug-in solid-state relays or digital I/O modules

The 1-, 4-, 8- or 16-time INTERFACE modules are the wiring interface and the coupling level in one unit. The connection to the interface module is established using screw connection technology.

Properties of the single interface:

- Status display
- Protection against polarity reversal in input
- Surge protection in input
- Assembly option with solid-state relay for loads up to 350 V DC/1 A or 480 V AC/5 A

Properties of the 4-, 8-, and 16-time interfaces:

- Status display
- Integrated fuse for line protection
- Assembly option with solid-state relay or I/O modules

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
For the protection of relay coils and contacts, inductive loads must be dampened with an efficient protection circuit.
Solid-state relays, see page 558

REL-MR miniature relay

The robust relays are used as interface relays throughout process and production engineering.

The main features of these relays are their compact design, reliable electrical isolation, and compliance with the most important standards, as well as the number of variants.

Notes:
If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The maximum values of the power contact relay are then valid. This can result in a shorter service life than with a pure power contact.
For diagrams of operating voltage ranges, see page 344

SIM-EI miniature solid-state relay

The SIM-EI miniature solid-state relays have connections compatible with commercially available miniature switching relays and are of the same shape.

The modules are used for floating conditioning of process signals as an alternative to electromechanical relays. Substituting mechanical relays for solid-state ones opens new possibilities for solving interface problems in a user-friendly way. The compatibility of the pins with the mechanical relay permits use of solid-state relays without any changes in the layout. The output of the solid-state relay is "high active" and designed as a 2- or 3-conductor output.

with DC voltage output
max. = 100 mA

OV solid-state relay

Solid-state relays for electrical isolation can be mounted directly on the printed circuit board as interfaces or plugged in using the SIM-AMS solder-in socket.

The solid-state relays are suitable for switching ohmic, capacitive or inductive loads. Relays for switching AC circuits have a zero voltage switch to switch the load on in the zero voltage crossing. It is switched off in the zero current crossing. The integrated RC element permits operation up to $\cos \phi = 0.5$.

Inductive DC loads must be equipped with a fast-acting freewheeling diode for semiconductor relay protection.

- Switching capacity up to 350 V DC/1 A, 60 V DC/4 A or 480 V AC/5 A
- No wear and tear even with high switching frequencies
- No contact bounce – no movable parts
- No electromagnetic interference
- Electrically insulated housings
- Small dimensions
- High test voltage of 4 kV between control and load circuits

Notes:
For derating curves see page 564
For suitable bases, see page 560

Solder-in socket for solid-state relays and I/O modules

Modern interface solutions for computer and electronic controls are increasingly being designed as I/O systems which are system-independent and individually mountable. Electrical isolation and signal conditioning are carried out using standard I/O modules. These are produced by various manufacturers in pin-compatible versions for different functions. The I/O modules are either soldered directly into the PCB or plugged into component sockets for quick interchanging.

SIM sockets facilitate the plugging of I/O modules considerably. All standard I/O modules and solid-state relays with up to eight connections can be plugged into the solder-in plug-in socket.

The I/O modules are securely fixed to the socket using fastening screws which are specific to the module. They are thereby protected against being accidentally released. Optocouplers, now also available in plug-in versions, are secured using the latch which is attached to the socket and which can be labeled. For better identification, each module plug position has its own marking panel on the socket.

The SIM socket has been designed so that it can be used on existing printed circuit boards without any layout modifications. Peripheral components such as LEDs or fuse resistors remain accessible to the user.

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
For dimensional drawings and pin assignments, see page 564
1) Applies only to the sockets SIM-AMS 1, SIM-AMS 1-R and SIM-AMSC in connection with the standard I/O modules with the corresponding AC voltage output.

Quality in quantity

Integrated management system

The aim of the Phoenix Contact integrated management system is to coordinate all the requirements regarding products, processes, and organization.

Statutory and regulatory requirements, as well as those of international standards and our customers, are met and, in some cases, even exceeded in all phases of the product life cycle.

In the Phoenix Contact management system, the integration of quality, environmental protection, and safety in the workplace is monitored each year for conformance by internationally recognized independent bodies. Certification in accordance with international standards ISO 9001, ISO 14001, and BS OHSAS 18001 is the result of our corporate philosophy of meeting the needs of our customers, staff, and environment as best as possible. They serve as the basis for innovative products with the familiar high Phoenix quality standard, actively practiced environmental protection, and responsibility in the field of occupational health and safety. Of course, we integrate all further requirements of standards, international approvals or special customer requirements into company processes.

This system provides a building block for the success of the Phoenix Contact Group and its products and services.

CE marking

The CE mark was introduced as an important instrument for the free movement of goods and services within the single European market. By attaching the mark to a product, the manufacturer confirms that it complies with all applicable European Union (EU) directives. EC directives describe the product properties with regard to device safety and avoiding danger. These are legally binding regulations of the European Union (EU). In other words, compliance with the requirements is a **statutory condition for marketing the product within the EU.**

Where applicable, the products that our company currently manufactures fall within the scope of the following directives:

- 2006/95/EC
Electrical equipment designed for use within certain voltage limits (Low Voltage Directive)
- 2004/108/EC
Electromagnetic compatibility (EMC Directive)
- 2006/42/EC
Safety of machinery (Machinery Directive)
- 94/9/EC
Equipment and protective systems intended for use in potentially explosive areas (ATEX Directive 100a)
- 1999/5/EC
Radio and telecommunications terminal equipment (R&TTE)

The standards upon which the specified directives are based have been part of our standard of development for a long time. This guarantees conformance with European directives. The numbers of the directives indicate their version at the time of publication. In the event of changes to directives and/or standards, our products will undergo conformity assessment again in good time and a new declaration of conformity will be issued promptly. The current declarations for each product can also be found in our Download Center.

The EMC Directive occupies a special place among the European directives listed. It defines electromagnetic compatibility as a fundamental property of devices based on mandatory guidelines. European Law therefore acknowledges the electromagnetic compatibility of devices and systems as an important condition for error-free operation of machinery and systems. Phoenix Contact is one of the leading international companies in surge protection, and therefore possesses broad expertise in EMC. This expertise and the experience gained over years of developing and applying industrial interface and communication technology have resulted in our products having an extremely high standard of quality with regard to electromagnetic compatibility. It was with a view to providing other companies with this expertise that our associate company, Phoenix Testlab, was founded. Phoenix Testlab GmbH is an independent, accredited service provider offering EMC testing that conforms to European standards. At Phoenix Testlab, devices are also tested with regard to their electrical safety, mechanical influences, and their behavior in relation to environmental influences. Furthermore, Phoenix Testlab is a “Notified Body” in accordance with EMC Directive 2004/108/EC and according to R&TTE Directive 1999/5/EC for radio and telecom-

munications terminal equipment. As a “Telecom Certification Body” (TCB), Phoenix Testlab may also approve these products for markets in the USA, Canada, and Japan.

Standards and regulations

All relevant standards and regulations are used as the basis for the development and maintenance of our products.

International standards are subject to continuous changes as a result of harmonization and new developments. In line with this process, the current version of all standards that are relevant to our products is documented in the product area on our website at www.phoenixcontact.net/products.

Online product information service on the web

Phoenix Contact's product range is growing constantly.

Due to our commitment to product monitoring, all products are subject to improvement.

The Internet is an ideal platform to quickly communicate new product developments and improvements to the market.

You can quickly access the relevant Phoenix Contact website for your region via www.phoenixcontact.com. Here, you will always find the latest overview of products, solutions, and services from Phoenix Contact. This includes technical documents, such as data sheets and user manuals, the latest driver and demo software, plus a means of contacting the appropriate contact person directly.

Shock protection

Back of hand safety

Example: pressure actuation

The accident prevention regulations BGV A 2 issued by the German employer's liability insurance association for precision mechanics and electrical engineering apply to the operators of electrical systems and are aimed at the prevention of electrical accidents by means of special safety requirements.

These regulations contain specifications regarding the safety distances for work, operation, and occasional handling in the proximity of "live parts" in low-voltage systems up to 1000 V ~ or 1500 V –.

- Work with live parts is only permitted once they have been de-energized. Operational activities are only permitted in the vicinity of live parts if these parts are de-energized or are protected against direct contact (§ 6). The following safety measures apply when working in the vicinity of active components:
- Provision of the de-energized state for the duration of the work
- Ensure shock protection is in place in the form of covers or barriers during the work
- Assurance that proximity limits will not be violated (§ 7)

The term "occasional handling" has been introduced for the operation of elements such as pushbuttons, rocker arms or rotary buttons in the proximity of live parts.

In VDE 0105-1, this is covered by "operation with partial protection against direct contact".

Detailed specifications for "occasional handling" can be found in DIN VDE 0106-100. This specifies to what degree live parts in the proximity of operating elements are to be protected against contact. The basis for this is the definition of a "protection area for occasional handling"; this is the area into which the user must reach in order to handle the machine.

The most important thing is that an area formed by an even envelope curve 30 mm in radius must surround the live parts. This area must be **touch proof**, i.e., the live parts of the electrical device must not be within reach of the VDE test finger in accordance with IEC 60529/DIN VDE 0470-1 (test finger).

Back of hand safety is specified for the "rest of the area" up to 100 mm around the operating element. **Back of hand safety** means that when a force of 50 N is applied to a ball with a diameter of 50 mm, this does not come into contact with the live parts of the

equipment. No special measures for shock protection are provided outside this area.

Note: systems and equipment that are operated with SELV up to 25 V ~ or 60 V – are considered to be protected against direct contact.

According to § 5, Subsection 4 of the BGV A 2 regulations, there is no need to test the condition of the system prior to initial startup if the company has confirmation from the manufacturer or installer that the electrical

systems and equipment conform to BGV A 2. The confirmation required relates to systems and equipment that have been installed and are ready for operation and can only be issued

by the installer or installation company. The manufacturer of the electrical equipment can only issue a confirmation that products have been produced in accordance with the relevant electrotechnical DIN VDE regulations stipulated in BGV A 2. The installer must bear this in mind when selecting the equipment to be used.

In the field of connection technology, Phoenix Contact offers a wide range of products that are touch proof or that can be protected against contact using covers. Depending on the conditions, all of this must be taken into account when selecting the individual types of terminal block and accessories.

Quality features of insulating housing

Thermoplastics

The majority of our insulating housing is made from thermoplastic materials. Roughly speaking, these can be divided into amorphous and semi-crystalline substances. Thermoplastics are processed using the efficient and environmentally-friendly injection molding process. They have good recycling properties and can be re-used. We use many materials that are modified in different ways to meet the demanding requirements that electrical and electronic modules, devices, and systems have to meet with regard to their mechanical, thermal, and electrical properties.

Behavior of plastics under the influence of temperature (operating temperatures, mechanical influences)

All plastics undergo a process referred to as thermal aging when they are subjected to heat over long periods. This process causes changes in the mechanical and electrical properties of the material. External influences, e.g., radiation, additional mechanical, chemical or electrical stresses, amplify this effect. Special tests on samples can yield characteristic data which provides a good means of drawing comparisons between different plastics. However, applying these characteristics to an evaluation of molded plastic parts is only possible to a limited extent, and can only give the designer a rough guide when it comes to selecting a plastic material. This catalog uses the following assessment criteria: the **RTI value** according to UL746B/ANSI 746 B (elec. based on dielectric strength) and the **Ti value** according to IEC 60216-1 (based on a 50% reduction in tensile strength after 20,000 hours).

IEC 60947-7-1/EN 60947-7-1 specifies a permissible temperature increase of 45 K for modular terminal blocks under nominal load. Phoenix Contact terminal blocks meet this requirement.

The properties of plastics are not only affected by the influence of heat as described above; they also undergo changes as a result of cold influences. When subjected to cold as well as low levels of humidity, plastics become increasingly brittle with the result that they are no longer capable of withstanding the same mechanical loads. As the table on the right shows, the plastics concerned can be used down to a temperature of -40°C , but only without a mechanical load. As far as the products presented in the catalog are concerned, it is the ambient temperature specified in each case that is to be regarded as definitive for operation. Regardless of the plastics used, this may be subject to further restrictions (e.g., limited to -20°C) as a result of the components used or other restrictive parameters.

At very low temperatures, this means that any form of mechanical load on the plastic components must be avoided (e.g., mounting of products on/removal of products from the DIN rail, actuation of terminal points, locking/ejection of relays from bases, prizing out of plug-in bridges, bending of cables and lines, etc.), as there is always an associated risk of damage. Unless otherwise indicated, it is recommended that you carry out the specified mounting/operational tasks in a temperature range from -10°C to $+40^{\circ}\text{C}$.

Inflammability characteristics of plastics (UL 94)

Inflammability tests for plastics have been defined by Underwriters Laboratories (USA) in regulation UL 94. This applies to all areas of application, but in particular to electrical engineering. A horizontal or vertical test is carried out at the test laboratory to determine the inflammability of the plastic material with a naked flame. In order of increasing resistance to combustion, the evaluation classes are HB, V2, V1, V0, and 5V. Test results are recorded on "yellow cards" and are published annually in the **Recognized Component Directory**.

Thermoplastics:

non-reinforced polyamide, PA

We use the modern, semi-crystalline polyamide insulation material, which has now become an essential component in electrical engineering and electronics. It has long occupied a leading position and is authorized for use by the relevant approval authorities such as the CSA, NEMKO, KEMA, PTB, SEV, UL, VDE, etc.

Polyamide also has excellent electrical, mechanical, chemical, and other properties, even at high operating temperatures. Brief peak temperatures up to approximately 200°C are permitted as a result of heat aging stabilization. Depending on the type (PA 4.6, 6.6, 6.10, etc.), its melting point is in the region of 215°C to 295°C .

Polyamide absorbs moisture from its surroundings, on average 2.8%. However, this moisture is not in the form of crystallization water in the plastic itself, but chemically bonded H_2O groups in the molecule structure. This makes the plastic flexible and resistant to breakage, even at temperatures as low as -40°C . According to UL 94, PA belongs to inflammability class V2 to V0.

Thermoplastics: polyester, PBT

We use the semi-crystalline thermoplastic polyester in non-reinforced and fiberglass-reinforced variants for special applications which require increased dimensional and form stability.

In addition to the high operating temperature, the material is characterized by excellent mechanical strength and hardness, and does not absorb moisture from its surroundings. PBT is therefore particularly suitable for strips, for example, which are soldered onto PCBs and subsequently have to pass a burn-in test while they are subjected to heat. According to UL 94, PBT belongs to inflammability class V2 to V0.

Thermoplastics: polycarbonate, PC

Polycarbonate combines many advantages such as rigidity, impact strength, transparency, dimensional stability, good insulation properties, and resistance to heat.

This amorphous material only absorbs moisture to a very limited degree, and is used for items such as large, rigid electronic component housing.

In its transparent form, polycarbonate is particularly suitable for use as cover profiles or marking materials.

PC has good resistance properties against mineral acids, saturated aliphatic hydrocarbons, gasoline, greases, and oils.

The material is less resistant to solvents, benzene, lyes, acetone, and ammonia. Strain cracks may result from contact with certain chemicals.

According to UL 94, PC belongs to inflammability class V2 to V0.

Thermoplastics: polycarbonate fiber-reinforced, PC-F

Compared to non-reinforced materials, fiber-reinforced polycarbonates feature greater rigidity, impact strength, and operating temperature. In other respects, their properties are largely identical to those of non-reinforced polycarbonate.

Thermoplastics: ABS

We use the thermoplastic molding compound ABS for products which must have good impact and notched impact properties in addition to high mechanical stability and rigidity. The products are resistant to chemicals and stress cracking due to their special surface quality and hardness.

The characteristic thermal properties provide good dimensional stability at both low and high temperatures. Products made from ABS can be coated with metallic surfaces, e.g., nickel.

According to UL 94, the molding compound used belongs to inflammability class HB to V0.

Dimensions: width / height / depth

The dimensions for “width / height / depth” are defined as follows for all DIN-rail-mountable products in the INTERFACE range:

- Width: measurement taken along the DIN rail
- Height: measurement taken across the DIN rail
- Depth: measurement taken starting from the mounting plate and including the NS 35/7,5 DIN rail (EN 60715)

The width, height, and depth never change, even if the products shown in this catalog happen to be photographed from two different perspectives (horizontal or vertical).

To make things easier for you, one of the following two symbols has been included next to each product photo:

Properties	Unit/level	Polyamide PA	Polyester PBT	Polycarbonate PC	Polycarbonate PC-F	ABS
Operating temperature RTI **	°C	≤ 105	≤ 105	≤ 125	≤ 120	≤ 80
Minimum temperature (without mechanical load)	°C	-40	-40	-40	-40	-40

* According to UL 746 B/ANSI 746 B (elec.) ** Minimum value

Connection cross section

The rated cross section of modular terminal blocks must be specified by the manufacturer in accordance with IEC 60947-7-1. The rated cross section is the maximum conductor cross section that can be connected in single-, multi- or fine-strand versions subject to specific thermal, mechanical, and electrical requirements.

The manufacturer must also specify the **rated connection capacity**, i.e., the area of the conductor that can be connected, as well as the number of conductors that can be connected simultaneously and the necessary preparation of the conductor ends. The conductors can be **solid (single or multi-**

strand) or stranded (fine-strand).

These values can be found in the product-specific technical data.

The rated connection capacity of Phoenix Contact modular terminal blocks usually exceeds standard requirements, which specify that it must only be possible to connect one conductor with one of the two next smallest cross sections, excluding the rated cross section (standardized for the cross section range from 0.2 to 35 mm²).

In addition, conductors with a rated cross section can usually be wired with ferrules with plastic sleeve.

Phoenix Contact modular terminal blocks

are designed to allow copper conductors to be connected to them untreated. "Special treatment" or the use of ferrules – both permitted according to IEC 60947-7-1 – is not required. If ferrules are nevertheless used to protect stranded conductors against splicing, the connection capacity of the stranded conductor is generally reduced by one level.

EMC: Class A product:

In accordance with statutory regulations, our products are indicated with this footnote if they are intended for use in industrial environments. This means that the permissible limit values for residential applications may be exceeded in the event of conducted and emitted interference. In such cases, the operator may have to take additional safety measures in order to ensure electromagnetic compatibility in residential applications.

Note:

Subject to changes that serve the purpose of technical progress.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
