

# High-Voltage Ring Generator

## Features

- ▶ 105Vrms ring signal
- ▶ Output overcurrent protection
- ▶ 5.0V CMOS logic control
- ▶ Logic enable/disable to save power
- ▶ Adjustable deadband in single-control mode
- ▶ Power-on reset
- ▶ Fault output for problem detection

## Applications

- ▶ Line access cards
- ▶ Set-top/Street box

The RESET input functions as a power-on reset when connected to an external capacitor. The FAULT output indicates an overcurrent condition and is cleared after 4 consecutive cycles with no overcurrent condition. A logic low on RESET or ENABLE clears the FAULT output. It is active-low and open-drain to allow wire OR'ing of multiple drivers.

$P_{GATE}$  and  $N_{GATE}$  are controlled independently by logic inputs  $P_{IN}$  and  $N_{IN}$  when the MODE pin is at logic high. A logic high on  $P_{IN}$  will turn on the external P-channel MOSFET. Similarly, a logic high on  $N_{IN}$  will turn on the external N-channel MOSFET. Lockout circuitry prevents the N and P switches from turning on simultaneously. A pulse width limiter restricts pulse widths to no less than 100 - 200ns.

## General Description

The Supertex HV430 is a high voltage PWM ring generator integrated circuit. The high voltage outputs,  $V_{PGATE}$  and  $V_{NGATE}$ , are used to drive the gates of external high voltage N-channel and P-channel MOSFETs in a push-pull configuration. Overcurrent protection is implemented for both the P-channel and N-channel MOSFETs. External sense resistors set the over-current trip point.

For applications where a single control input is desired, the MODE pin should be connected to SGND. The PWM control signal is then input to the  $N_{IN}$  pin. A user-adjustable deadband in the control logic ensures break-before-make on the outputs, thus avoiding cross conduction on the high voltage output during switching. A logic high on  $N_{IN}$  will turn the external P-Channel MOSFET on and the N-Channel off, and vice versa. The IC can be powered down by applying a logic low on the ENABLE pin, placing both external MOSFETs in the off state.

## Functional Block Diagram

## Ordering Information

Part Number	Package Option	Packing
HV430WG-G	20-Lead SOW	1000/Reel

-G denotes a lead (Pb)-free / RoHS compliant package

## Absolute Maximum Ratings

Parameter	Value
$V_{PP1} - V_{NN1}$ , power supply voltage	+340V
$V_{PP1}$ , positive high voltage supply	+220V
$V_{PP2}$ , positive gate voltage supply	+220V
$V_{NN1}$ , negative high voltage supply	-220V
$V_{NN2}$ , negative gate voltage supply	-220V
$V_{DD}$ , logic supply	+7.5V
Operating temperature range	-40°C to +85°C
Storage temperature range	-65°C to +150°C
Power dissipation	600mW

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## Pin Configuration

20-Lead SOW  
(top view)

## Product Marking

Package may or may not include the following marks: Si or

20-Lead SOW

## Typical Thermal Resistance

Package	$\theta_{ja}$
20-Lead SOW	66°C/W

## Electrical Characteristics (Over operating supply voltage unless otherwise specified. $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$ )

Sym	Parameter	Min	Typ	Max	Units	Conditions
$V_{PP1}$	High voltage positive supply	50	-	200	V	---
$I_{PP1Q}$	$V_{PP1}$ quiescent current	-	250	500	$\mu\text{A}$	$P_{IN} = N_{IN} = 0\text{V}$
$I_{PP1}$	$V_{PP1}$ operating current	-	-	2.0	mA	No load, $V_{OUTP}$ and $V_{OUTN}$ switching at 100KHz
$V_{NN1}$	High voltage negative supply	$V_{PP1} - 325$	-	-50	V	---
$I_{NN1Q}$	$V_{NN1}$ quiescent current	-	250	500	$\mu\text{A}$	$P_{IN} = N_{IN} = 0\text{V}$ , $R_{DB} = 18\text{k}\Omega$
$I_{NN1}$	$V_{NN1}$ operating current	-	-	1.0	mA	No load, $V_{OUTP}$ and $V_{OUTN}$ switching at 100KHz
$V_{DD}$	Logic supply voltage	4.50	-	5.50	V	---
$I_{DDQ}$	$V_{DD}$ quiescent current	-	300	400	$\mu\text{A}$	$P_{IN} = N_{IN} = 0\text{V}$ , $R_{DB} = 18\text{k}\Omega$
$I_{DD}$	$V_{DD}$ operating current	-	-	1.0	mA	$P_{IN} = N_{IN} = 100\text{KHz}$ , $R_{DB} = 18\text{k}\Omega$

**Electrical Characteristics (cont.)** (Over operating supply voltage unless otherwise specified.  $T_A = -40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ )

Sym	Parameter	Min	Typ	Max	Units	Conditions

\* Unused logic inputs should be connected to VDD or GND.

Single-Control Mode Timing

Dual-Control Mode Timing

## ENABLE Timing

## RESET Timing

FAULT Timing

## Pin Description

Pin #	Name	Description
1	VDD	Logic supply voltage.
2	$\overline{\text{FAULT}}$	Logic output. Fault is at logic low when either current limit sense pin, VPSEN or VNSEN, is activated. Remains active until overcurrent condition clears or ENABLE = 0 or RESET = 0.
3	MODE	Logic mode input. 0 = single-control; 1 = dual-control. When MODE is high, NIN and PIN independently control $N_{\text{OUT}}$ and $P_{\text{OUT}}$ , respectively. When MODE is low, NIN controls both outputs in a complementary manner. (See Truth Table)
4	PIN	Logic control input. When mode is high, logic input high turns on the external high voltage P-channel MOSFET. Internally pulled low.
5	NIN	Logic control input. When mode is high, logic input high turns on the external high voltage N-channel MOSFET. Internally pulled low.
6	ENABLE	Logic enable input. Logic high enables IC. Internally pulled low.
7	$\overline{\text{RESET}}$	Power-on reset. A capacitor connected between this pin and ground determines the delay time between application of VDD and when the device outputs are enabled. Low leakage tantalum recommended.
8	DEADBAND	A resistor between this pin and ground sets the 'break-before-make' time between output transitions. Applicable only in single-control mode. For minimum deadtime, a 5.6k $\Omega$ resistor to ground should be used. For dual-input mode, tie to VDD.
9	SGND	Low voltage logic ground.
10	PGND	High voltage logic ground.
11	VNN2	Negative gate voltage supply. Generated by an internal linear regulator. A 25V, 100nF capacitor should be connected between VNN2 and VNN1.
12	VNN1	Negative high voltage supply.
13	VNSEN	Pulse by pulse over current sensing for N-Channel MOSFET.
14	VNGATE	Gate drive for external N-channel MOSFET.
15	N/C	No connect.
16		
17	VPGATE	Gate drive for external P-channel MOSFET.
18	VPSEN	Pulse by pulse over current sensing for P-Channel MOSFET.
19	VPP1	Positive high voltage supply.
20	VPP2	Positive gate voltage supply. Generated by an internal linear regulator. A 25V, 100nF capacitor should be connected between VPP2 and VPP1.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
