

MAX14983E

Enhanced 1:2 VGA Mux with Monitor Detection and Priority Port Logic

General Description

The MAX14983E integrates high-bandwidth analog switches, level-translating buffers, and 5V power switches to implement a complete 1:2 multiplexer for VGA monitors. The device switches graphics signals between a controller and two outputs. Integrated pullup resistors (2.2k Ω , typ) are provided on the monitor-side display data channel (DDC) signal lines.

The device features a simple power interface that operates with a single +5V supply input. Two integrated power switches with current limiting and reverse-current protection pass the +5V supply to external loads with minimal voltage drop.

The horizontal and vertical synchronization (HSYNC/VSYNC) buffers shift logic levels to support +2.5V to +5.0V CMOS or TTL-compatible graphics controllers while meeting the VESA drive capability requirement of $\pm 8\text{mA}$. An internal 2.5V regulator translates the DDC voltage levels to be compatible with low-voltage graphics controllers.

The device also features monitor-detect outputs and enable inputs that allow monitor switching to operate either automatically or with inputs from the graphics controller.

The MAX14983E is available in a 32-pin (5mm x 5mm) TQFN package, and is specified over the -40°C to $+85^{\circ}\text{C}$ extended temperature range.

Applications

- Servers
- KVM Switches
- Computing
- Graphics Cards

Ordering Information appears at end of data sheet.

Benefits and Features

- Design Flexibility
 - Graphics Controller Port is Protected when $V_{CC} = 0\text{V}$
 - DDC Switches Limit Voltage to Low-Voltage Supply
 - Internal +2.5V Regulator
- High Level of Integration for Enhanced Performance
 - Low 5.5pF (typ) RGB Capacitance
 - 2.0ns (typ) t_R/t_F with 10pF, 2.2k Ω Load on Monitor-Side SYNC Signals
 - Source and Sink 8mA While Meeting Speed Requirements
 - $\pm 11\text{kV}$ Human Body Model (HBM)
- Saves Space on Board
 - Internal Power Switches
 - Pass +5V with 300mV (max) IR Drop
 - Short-Circuit/Thermal/Reverse-Current Protection
 - 5mm x 5mm, 32-Pin TQFN Package

Typical Application Circuit

Absolute Maximum Ratings

(Voltages referenced to GND.)

V_{CC} , S5V1, S5V2, SDA_, SCL_, REF, MD_, EN_, MDOR.....-0.3V to +6V
 HSYNC_, VSYNC_, R_, G_, B_ -0.3V to (V_{CC} + 0.3V)
 Continuous Current Through R_, G_, B_ Switches ±50mA
 Continuous Current Through SDA_, SCL_ Switches..... ±50mA
 Continuous Current Through S5V_..... ±750mA
 Peak Current Through R_, G_, B_, SDA_, SCL_ (10% duty cycle)..... ±100mA

Continuous Power Dissipation ($T_A = +70^\circ\text{C}$)
 TQFN (derate 34.5mW/ $^\circ\text{C}$ above $+70^\circ\text{C}$).....2758.6mW
 Operating Temperature Range..... -40°C to $+85^\circ\text{C}$
 Junction Temperature..... $+150^\circ\text{C}$
 Storage Temperature Range..... -65°C to $+150^\circ\text{C}$
 Lead Temperature (soldering, 10s) $+300^\circ\text{C}$
 Soldering Temperature (reflow) $+260^\circ\text{C}$

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Package Thermal Characteristics (Note 1)

TQFN

Junction-to-Ambient Thermal Resistance (θ_{JA}) 29°C/W
 Junction-to-Case Thermal Resistance (θ_{JC})..... 1.7°C/W

Note 1: Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to www.maximintegrated.com/thermal-tutorial.

Electrical Characteristics

($V_{CC} = +5V \pm 5\%$, $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$, unless otherwise noted. Typical values are at $V_{CC} = +5V$, $T_A = +25^\circ\text{C}$.) (Note 2)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
POWER SUPPLY						
Quiescent Current	I_Q	$V_{CC} = 5.25V$, $V_{EN1} = V_{EN2} = V_{CC}$, REF unconnected		50	150	μA
Operating Current	I_{CC}	HSYNC0 = 50kHz, VSYNC0 = 60Hz 10% duty cycle, R_L on SYNC outputs = 2k Ω , REF unconnected		1.5	2.7	mA
5V SWITCH (S5V1, S5V2 OUTPUTS)						
S5V_ Voltage Drop	V_{S5V}	$I_{OUT} = 55\text{mA}$			0.3	V
Reverse Leakage Current	I_L	$V_{CC} = 0V$, $V_{EN1} = V_{EN2} = 0V$, $V_{S5V1} = V_{S5V2} = 5.25V$, no load on S5V1 or S5V2			10	μA
Pulldown Resistor	R_{S5V1} , R_{S5V2}	$V_{S5V1} = V_{S5V2} = 1V$, $V_{EN1} = V_{EN2} = V_{CC}$		250		Ω
Output Current Limit	I_{LIM}		55	300	500	mA
Thermal-Shutdown Threshold	T_{SHDN}			+150		$^\circ\text{C}$
Thermal-Shutdown Hysteresis	T_{SHDN_HYS}			25		$^\circ\text{C}$

Electrical Characteristics (continued)(V_{CC} = +5V ±5%, T_A = -40°C to +85°C, unless otherwise noted. Typical values are at V_{CC} = +5V, T_A = +25°C.) (Note 2)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
DDC SWITCHES (SDA_, SCL_ INPUTS/OUTPUTS)						
Input Leakage Current	I _L	V _{EN1} = V _{CC} , V _{EN2} = V _{CC} , V _{IN} = 0V or 5.25V	-1		+1	μA

On-Loss	I _{LOSS}	Figure 1, f = 50MHz, R _S = R _L = 50Ω	-0.6			dB
On-Resistance	R _{ON}	I _{IN} = ±10mA, V _{IN} = 0.7V		5	8	Ω
On-Resistance Matching	ΔR _{ON}	I _{IN} = ±10mA, V _{IN} = 0 to 0.7V			1	Ω
On-Resistance Flatness	R _{FLAT(ON)}	I _{IN} = ±10mA, V _{IN} = 0 to 0.7V		0.5	1	Ω
B1, B2 Internal Pullup Resistance	R _B			2.5		kΩ
Off-Leakage Current	I _{LOFF}	V _{R_} = V _{G_} = V _{B0} = 0V or V _{CC}	-1		+1	μA
Off-Capacitance	C _{OFF}	f = 1MHz; R0, G0, B0 to R_, G_, B_		2.5		pF
On-Capacitance	C _{ON}	f = 1MHz; R0, G0, B0 to R_, G_, B_		5.5		pF
ESD PROTECTION						
High-ESD Pins ESD Protection		Human Body Model (Note 4)		±11		kV
All Other Pins ESD Protection		Human Body Model (Note 4)		±2		kV

Note 2: All units are production tested at T_A = +25°C. Specifications over temperature are guaranteed by design.**Note 3:** V_{PU} is the pullup voltage.**Note 4:** See the [Pin Description](#) section for the ESD status of each pin.

Figure 1. On-Loss

Typical Operating Characteristics

(V_{CC} = +5.0V, T_A = +25°C, unless otherwise noted.)

Typical Operating Characteristics (continued)

(V_{CC} = +5.0V, T_A = +25°C, unless otherwise noted.)

Pin Configuration

Pin Description

PIN	NAME	FUNCTION	ESD
1, 20	GND	Ground	—
2	R0	RGB Analog Input	Standard
3	G0	RGB Analog Input	Standard
4	B0	RGB Analog Input	Standard
5	HSYNC0	Horizontal Sync Input	Standard
6	VSYNC0	Vertical Sync Input	Standard
7	SDA0	DDC Input/Output	Standard
8	SCL0	DDC Input/Output	Standard
9	$\overline{\text{EN2}}$	Active-Low Enable Input 2. Assert $\overline{\text{EN2}}$ to connect the graphics controller to the monitor on port 2 (see Table 1).	Standard
10	$\overline{\text{MDOR}}$	Logic NOR Output of $\overline{\text{MD1}}$ and $\overline{\text{MD2}}$. $\overline{\text{MDOR}}$ asserts whenever a monitor is detected on either port. $\overline{\text{MDOR}}$ is an active-low, open-drain output.	Standard
11	V _{CC}	Supply Voltage. V _{CC} = +5.0V ±5%. Bypass V _{CC} to GND with a 1µF or larger ceramic capacitor as close as possible to V _{CC} .	Standard
12	S5V2	Switched 5V Out 2. S5V2 is internally pulled down when not connected. Bypass S5V2 to GND with a 1µF or larger capacitor as close as possible to S5V2.	High
13	SDA2	DDC Input/Output. SDA2 has a 2.2kΩ (typ) internal pullup resistor to S5V2.	High
14	SCL2	DDC Input/Output. SCL2 has a 2.2kΩ (typ) internal pullup resistor to S5V2.	High
15	R2	RGB Analog Output for Port 2	High
16	G2	RGB Analog Output for Port 2	High
17	B2	RGB Analog Output for Port 2	High
18	HSYNC2	Horizontal Sync Output for Port 2	High
19	VSYNC2	Vertical Sync Output for Port 2	High
21	REF	Monitor-Detection Reference. Connect a 105Ω ±1% resistor from REF to ground.	Standard
22	VSYNC1	Vertical Sync Output for Port 1	High
23	HSYNC1	Horizontal Sync Output for Port 1	High
24	B1	RGB Analog Output for Port 1	High
25	G1	RGB Analog Output for Port 1	High
26	R1	RGB Analog Output for Port 1	High
27	SCL1	DDC Input/Output. SCL1 has a 2.2kΩ (typ) internal pullup resistor to S5V1.	High
28	SDA1	DDC Input/Output. SDA1 has a 2.2kΩ (typ) internal pullup resistor to S5V1.	High
29	S5V1	Switched 5V Out 1. S5V1 is internally pulled down when not connected. Bypass S5V1 to GND with a 1µF or larger capacitor as close as possible to S5V1.	High
30	$\overline{\text{MD2}}$	Monitor-Detect Output 2. $\overline{\text{MD2}}$ asserts when a monitor is detected on port 2. $\overline{\text{MD2}}$ is an active-low, open-drain output.	Standard
31	$\overline{\text{MD1}}$	Monitor-Detect Output 1. $\overline{\text{MD1}}$ asserts when a monitor is detected on port 1. $\overline{\text{MD1}}$ is an active-low, open-drain output.	Standard
32	$\overline{\text{EN1}}$	Enable Input 1. Assert $\overline{\text{EN1}}$ to connect the graphics controller to the monitor on port 1 (see Table 1).	Standard
—	EP	Exposed Pad. Connect exposed pad to GND.	—

No	Yes	1	0	0
Yes	No	0	1	0
Yes	Yes	0	0	0

Note: $\overline{MD1}$, $\overline{MD2}$, and \overline{MDOR} function regardless of the state of the EN_{-} inputs.

Detailed Description

The MAX14983E integrates high-bandwidth analog switches and level-translating buffers to implement a complete 1:2 multiplexer for VGA signals. The device provides switching for red-green-blue (RGB) signals, horizontal and vertical synchronization (HSYNC/VSYNC) pulses, display data channel (DDC) signals, and 5V power supplies. The power switches provide +5V power with current limiting and reverse-voltage protection.

The device uses a simplified power-supply interface that operates from a single +5V supply. An internal 2.5V regulator limits the voltage passed by the DDC switches to provide compatibility with low-voltage graphics controllers.

The device features two enable inputs and three monitor-detection outputs. This interface signals to the graphics controller when a monitor is inserted or removed from either of the VGA ports and allows it to switch between them. Alternatively, these signals can be connected

together to automatically select the port when a monitor is plugged in. A dedicated output (\overline{MDOR}) signals the graphics controller when any monitor is detected.

5V Power Switches (S5V1, S5V2)

The device provides a switched +5V output in addition to the regular VGA signals (S5V1 and S5V2). Each output can supply 55mA with less than 300mV drop from V_{CC} . The S5V_ outputs tolerate +5V while turned off.

The power switches are protected against overcurrent and overtemperature faults. The device limits current supplied to each monitor side to 300mA (typ). Thermal protection circuitry shuts off the switch when the temperature exceeds +150°C. The device is re-enabled once the temperature has fallen below +125°C.

Each power switch output has a 250Ω (typ) pulldown resistor to discharge filter capacitors when the switch is off.

RGB Switches

The device provides three single-pole/double-throw (SPDT) high-bandwidth switches to route the standard VGA R, G, and B signals (Table 1). The R, G, and B analog switches are identical, and any of the three switches can be used to route red, green, or blue video signals.

Horizontal/Vertical Sync Multiplexer

The $HSYNC_{-}/VSYNC_{-}$ signals are buffered to provide level shifting and drive capability to meet the VESA specification. $HSYNC_{-}/VSYNC_{-}$ signals are only routed to the port selected by $EN2$ and $EN1$ (Table 1). $HSYNC_{-}$ and $VSYNC_{-}$ are not interchangeable.

Display Data Channel Multiplexer (SDA_, SCL_)

The device provides two voltage-limited SPDT switches to route DDC signals (SDA_, SCL_). These switches limit the voltage that can be passed through to the graphics controller to less than 2.5V. Internal pullup resistors on the monitor side of the switches translate the graphics controller signals to 5V compatible logic. Connect pullup resistors on SCL0 and SDA0 to define the logic level of the graphics controller.

The SDA_ and SCL_ switches are identical, and either of these two switches can be used to route SDA or SCL I²C signals.

Applications Information

1:2 Multiplexer for Low-Voltage Graphics Controllers

The device provides the level shifting necessary to drive two standard VGA ports using a single graphics controller. Internal buffers drive the HSYNC_ and VSYNC_ signals to VGA standard TTL levels. The DDC multiplexer provides level shifting by limiting signal levels to less than 2.5V.

Power-Supply Decoupling

Bypass V_{CC} to ground with a 1 μ F or larger ceramic capacitor as close as possible to the device.

PCB Layout

High-speed switches such as the MAX14983E require proper PCB layout for optimum performance. Ensure that impedance-controlled PCB traces for high-speed signals are matched in length and as short as possible. Connect the exposed pad to a solid ground plane.

High-ESD Protection

Electrostatic discharge (ESD)-protection structures are incorporated on all pins to protect against electrostatic discharges up to ± 2 kV Human Body Model (HBM) encountered during handling and assembly. All outputs are further protected against ESD up to ± 11 kV (HBM) without damage (see the [Pin Description](#)).

The ESD structures withstand high ESD both in normal operation and when the device is powered down. After an ESD event, the device continues to function without latchup.

ESD Test Conditions

ESD performance depends on a variety of conditions. Contact Maxim for a reliability report that documents test methodology and results.

Human Body Model

[Figure 2](#) shows the Human Body Model. [Figure 3](#) shows the current waveform it generates when discharged into a low impedance. This model consists of a 100pF capacitor charged to the ESD voltage of interest that is then discharged into the device through a 1.5k Ω resistor.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
