

## YMF724F

### DS-1

---

#### ■ OVERVIEW

YMF724F (DS-1) is a high performance audio controller for the PCI Bus. DS-1 consists of two separated functional blocks. One is the PCI Audio block and the other is the Legacy Audio block. PCI Audio block allows Software Driver to handle maximum of 73 concurrent audio streams with the Bus Master DMA engine. The PCI Audio Engine converts the sampling rate of each audio stream and the streams are mixed without utilizing the CPU or causing system latency. By using the Software Driver from YAMAHA, PCI Audio provides 64-voice XG wavetable synthesizer with Reverb and variation. It also supports DirectSound hardware accelerator, Downloadable Sound (DLS) and DirectMusic accelerator.

Legacy Audio block supports FM Synthesizer, Sound Blaster Pro, MPU401 UART mode and Joystick function in order to provide hardware compatibility for numerous PC games on real DOS without any software driver. To achieve legacy DMAC compatibility on the PCI, DS-1 supports both PC/PCI and Distributed DMA protocols. DS-1 also supports Serialized IRQ for legacy IRQ compatibility.

DS-1 supports the connection to AC'97 which provides high quality DAC, ADC and analog mixing.

In addition, it supports consumer IEC958, Audio Digital Interface (SPDIF) output, for high-quality, external audio amplification.

#### ■ FEATURES

- PCI 2.1 Compliant
- PC'97/PC'98 specification Compliant
- PCI Bus Power Management rev. 1.0 Compliant (Support D0, D2 and D3 state)
- PCI Bus Master for PCI Audio
  - True Full Duplex Playback and Capture with different Sampling Rate
  - Maximum 64-voice XG capital Wavetable Synthesizer including GM compatibility
  - DirectSound Hardware Acceleration
  - DirectMusic Hardware Acceleration
  - Downloadable Sound (DLS) level-1
- Legacy Audio compatibility
  - FM Synthesizer
  - Hardware Sound Blaster Pro compatibility
  - MPU401 UART mode MIDI interface
  - Joystick
- Supports PC/PCI and Distributed DMA for legacy DMAC (8237) emulation
- Supports Serialized IRQ
- Supports YAMAHA AC-3 device (YMF727 : AC3F2) interface to enable AC-3 decode
- Supports Consumer IEC958 Output (SPDIF) port
- Supports AC'97 Interface (AC-Link)
- Hardware Volume Control
- EEPROM Interface
- Single Crystal operation (24.576MHz)
- 5V Power supply for I/O. 3.3V Power supply for Internal core logic
- 144-pin LQFP (YMF724F-V)

SONDIUS-XG™

Sensaura™

## ■ Logos

GENERAL MIDI logo is a trademark of Association of Musical Electronics Industry (AMEI), and indicates GM system level 1 Compliant.

XG logo is a trademark of YAMAHA Corporation.

SONDIUS-XG logo is a trademark that Stanford University in the United States and YAMAHA Corporation hold jointly.

Sensaura logo is a trademark of Central Research Laboratories Limited.

### 1. GM system level 1

GM system level 1 is a world standard format about MIDI synthesizer which provides voice arrangements and MIDI functions.

### 2. XG

XG is a format about MIDI synthesizer that is proposed by YAMAHA, and keeps the upper compatibility of GM system level 1. The good points are the voice arrangements kept extensively, a large number of the voices, modification of the voices, 3 kinds of effects, and so on.

### 3. SONDIUS-XG

Products bearing the SONDIUS-XG logo are licensed under patents of Stanford University and YAMAHA Corporation as listed on <<http://www.sondius-xg.com>>. The SONDIUS-XG produces acoustic sound outputs by running a virtual simulation of the actual acoustic instrument operation. Therefore, it provides much more real-world acoustic sound outputs fundamentally different from the Wavetable sound generator that simply processes the recorded acoustic sound sources only. The SONDIUS-XG adds the technology of virtual acoustic sound to the XG format.

### 4. Sensaura

Sensaura is a technology which provides 3D positional audio and moving effect by HRTF (Head Related Transfer Function) with 2 speakers or headphone. This feature makes it possible to enjoy invariable and unchangeable sound feelings in all-positional area covering as wide as 360 degrees.

## PIN CONFIGURATION

144 Pin LQFP Top View

## ■ PIN DESCRIPTION

### 1. PCI Bus Interface (53-pin)

| name       | I/O | Type | Size | function                            |
|------------|-----|------|------|-------------------------------------|
| PCICLK     | I   | P    |      | PCI Clock                           |
| RST#       | I   | P    |      | Reset                               |
| AD[31:0]   | IO  | Ptr  |      | Address / Data                      |
| C/BE[3:0]# | IO  | Ptr  |      | Command / Byte Enable               |
| PAR        | IO  | Ptr  |      | Parity                              |
| FRAME#     | IO  | Pstr |      | Frame                               |
| IRDY#      | IO  | Pstr |      | Initiator Ready                     |
| TRDY#      | IO  | Pstr |      | Target Ready                        |
| STOP#      | IO  | Pstr |      | Stop                                |
| IDSEL      | I   | P    |      | ID Select                           |
| DEVSEL#    | IO  | Pstr |      | Device Select                       |
| REQA#      | O   | P    |      | PCI Request                         |
| GNTA#      | I   | P    |      | PCI Grant                           |
| PCREQ#     | O   | Ptr  |      | PC/PCI Request                      |
| PCGNT#     | I   | Ptr  |      | PC/PCI Grant                        |
| PERR#      | IO  | Pstr |      | Parity Error                        |
| SERR#      | O   | Pod  |      | System Error                        |
| INTA#      | O   | Pod  |      | Interrupt signal output for PCI bus |
| SERIRQ#    | IO  | Ptr  |      | Serialized IRQ.                     |

### 2. AC'97 Interface (6-pin)

| Name  | I/O | Type | Size | function                                      |
|-------|-----|------|------|-----------------------------------------------|
| CRST# | O   | T    | 6mA  | Reset signal for AC'97                        |
| CMCLK | O   | C    | -    | Master Clock of AC link (24.576MHz) and AC3F2 |
| CBCLK | I   | T    | -    | AC-link: Bit Clock for AC'97 audio data       |
| CSDO  | O   | T    | 6mA  | AC-link: AC'97 Serial audio output data       |
| CSDI  | I   | T    | -    | AC-link: AC'97 Serial audio input data        |
| CSYNC | O   | T    | 6mA  | AC-link: Synchronized signal                  |

### 3. YMF727(AC3F2) Interface (9-pin)

| name  | I/O | type | size | function                                        |
|-------|-----|------|------|-------------------------------------------------|
| XRST# | O   | C    | 2mA  | Reset for local device                          |
| ACS#  | O   | T    | 3mA  | Chip select for AC3F2                           |
| ASCLK | O   | T    | 6mA  | Clock for Serial control data transfer of AC3F2 |
| ACDO  | O   | T    | 3mA  | Serial control data output of AC3F2             |
| ACDI  | I   | Tup  | -    | Serial control data input of AC3F2              |
| ALRCK | O   | T    | 3mA  | L/R clock for Serial audio data of AC3F2        |
| ABCLK | O   | T    | 6mA  | Bit clock for Serial audio data of AC3F2        |
| ASDO  | O   | T    | 3mA  | Serial audio data output to AC3F2               |
| ASDI  | I   | Tup  | -    | Mixed Serial audio data input of AC3F2          |

### 4. SPDIF Interface (1-pin)

| name | I/O | type | Size | function                               |
|------|-----|------|------|----------------------------------------|
| DIT  | O   | T    | 3mA  | Digital audio interface output (48kHz) |

### 5. Legacy Device Interface (16-pin)

| name    | I/O | type | Size | function                                                                                           |
|---------|-----|------|------|----------------------------------------------------------------------------------------------------|
| IRQ5    | O   | Ttr  | 12mA | Interrupt5 of Legacy Audio<br>It is directly connected to the interrupt signal of System I/O chip. |
| IRQ7    | O   | Ttr  | 12mA | Interrupt7 of Legacy Audio                                                                         |
| IRQ9    | O   | Ttr  | 12mA | Interrupt9 of Legacy Audio                                                                         |
| IRQ10   | O   | Ttr  | 12mA | Interrupt10 of Legacy Audio                                                                        |
| IRQ11   | O   | Ttr  | 12mA | Interrupt11 of Legacy Audio.                                                                       |
| GP[3:0] | I   | A    | -    | Game Port                                                                                          |
| GP[7:4] | I   | Tup  | -    | Game Port                                                                                          |
| GREF    | I   | A    | -    | Reference for Game Port                                                                            |
| RXD     | I   | Tup  | -    | MIDI Data Receive                                                                                  |
| TXD     | O   | T    | 3mA  | MIDI Data Transfer                                                                                 |

## 6. Miscellaneous (15-pin)

| name           | I/O | type | Size | function                                                                                          |
|----------------|-----|------|------|---------------------------------------------------------------------------------------------------|
| ROMCS          | O   | T    | 3mA  | Chip select for external EEPROM                                                                   |
| ROMSK / VOLUP# | IO  | Tup  | 3mA  | Serial clock for external EEPROM or Hardware Volume (Up)                                          |
| ROMDO / VOLDW# | IO  | Tup  | 3mA  | Serial data output for external EEPROM or Hardware Volume (Down)                                  |
| ROMDI / TEST2# | I   | Tup  | -    | Serial data input for external EEPROM or Test pin (Do not connect externally when EEPROM is not.) |
| XI24           | I   | C    | -    | 24.576 MHz Crystal                                                                                |
| XO24           | O   | C    | 2mA  | 24.576 MHz Crystal                                                                                |
| TEST[7:4,1:0]# | I   | Tup  | -    | Test pins (Do not connect externally)                                                             |
| TEST3#         | IO  | Tup  | 3mA  | Test pin (Connect to ground)                                                                      |
| LOOPF[1:0]     | -   | -    | -    | Capacitor of PLL                                                                                  |

Note) Hardware volume and EEPROM interface can not be used at the same time. When both hardware volume and EEPROM are not used, do not connect these pins externally.

## 7. Power Supply (39-pin)

| name       | I/O | type | Size | function                                  |
|------------|-----|------|------|-------------------------------------------|
| PVDD[5:0]  | -   | -    | -    | Power supply for PCI Bus Interface (+5.0) |
| PVSS[14:0] | -   | -    | -    | Ground for PCI Bus Interface              |
| LVDD       | -   | -    | -    | Power supply for PLL Filter (+3.3)        |
| LVSS       | -   | -    | -    | Ground for PLL Filter                     |
| VDD3[3:0]  | -   | -    | -    | Power supply (+3.3V)                      |
| VDD5[3:0]  | -   | -    | -    | Power supply (+5.0V)                      |
| VSS[7:0]   | -   | -    | -    | Ground                                    |

### TYPE

T : TTL

A : Analog

Ptr : Tri-State PCI

Ttr : Tri-State TTL

C : CMOS

Pstr : Sustained Tri-State PCI

Tup : Pull up (Max. 300kohm) TTL

P : PCI

Pod : Open Drain PCI

## ■ BLOCK DIAGRAM

## ■ SYSTEM DIAGRAM

## ■ FUNCTION OVERVIEW

### 1. PCI INTERFACE

DS-1 supports the PCI bus interface and complies to PCI revision 2.1.

#### 1-1. PCI Bus Command

DS-1 supports the following PCI Bus commands.

##### 1-1-1. Target Device Mode

| C/BE[3:0]# | Command                                   |
|------------|-------------------------------------------|
| 0 0 0 0    | Interrupt Acknowledge (not support)       |
| 0 0 0 1    | Special Cycle (not support)               |
| 0 0 1 0    | I/O Read                                  |
| 0 0 1 1    | I/O Write                                 |
| 0 1 0 0    | reserved                                  |
| 0 1 0 1    | reserved                                  |
| 0 1 1 0    | Memory Read                               |
| 0 1 1 1    | Memory Write                              |
| 1 0 0 0    | reserved                                  |
| 1 0 0 1    | reserved                                  |
| 1 0 1 0    | Configuration Read                        |
| 1 0 1 1    | Configuration Write                       |
| 1 1 0 0    | Memory Read Multiple (not support)        |
| 1 1 0 1    | Dual Address Cycle (not support)          |
| 1 1 1 0    | Memory Read Line (not support)            |
| 1 1 1 1    | Memory Write and Invalidate (not support) |

DS-1 does not assert DEVSEL# when accessed with commands that are indicated as (not supported) or reserved.

##### 1-1-2. Master Device Mode

| C/BE[3:0]# | Command      |
|------------|--------------|
| 0 1 1 0    | Memory Read  |
| 0 1 1 1    | Memory Write |

When DS-1 becomes a Master Device, it generates only memory write and read cycle commands.

## 1-2. PCI Configuration Register

In addition to the Configuration Register defined by PCI Revision 2.1, DS-1 provides proprietary PCI Configuration Registers in order to control legacy audio function, such as FM Synthesizer, Sound Blaster Pro, MPU401 and Joystick. These additional registers are configured by BIOS or the configuration software from YAMAHA Corporation.

The following shows the overview of the PCI Configuration Register.

| Offset | b[31..24]                     | b[23..16]      | b[15..8]                          | b[7..0]        |
|--------|-------------------------------|----------------|-----------------------------------|----------------|
| 00-03h | Device ID                     |                | Vendor ID                         |                |
| 04-07h | Status                        |                | Command                           |                |
| 08-0Bh | Base Class Code               | Sub Class Code | Programming IF                    | Revision ID    |
| 0C-0Fh | Reserved                      | Header Type    | Latency Timer                     | Reserved       |
| 10-13h | PCI Audio Memory Base Address |                |                                   |                |
| 14-2Bh | Reserved                      |                |                                   |                |
| 2C-2Fh | Subsystem ID                  |                | Subsystem Vendor ID               |                |
| 30-33h | Reserved                      |                |                                   |                |
| 34-37h | Reserved                      |                |                                   | Cap Pointer    |
| 38-3Bh | Reserved                      |                |                                   |                |
| 3C-3Fh | Maximum Latency               | Minimum Grant  | Interrupt Pin                     | Interrupt Line |
| 40-43h | Extended Legacy Audio Control |                | Legacy Audio Control              |                |
| 44-47h | Subsystem ID Write            |                | Subsystem Vendor ID Write         |                |
| 48-4Bh | DS-1 Power Control            |                | DS-1 Control                      |                |
| 4C-4Fh | Reserved                      |                | D-DMA Slave Configuration         |                |
| 50-53h | Power Management Capabilities |                | Next Item Pointer                 | Capability ID  |
| 54-57h | Reserved                      |                | Power Management Control / Status |                |
| 58-5Bh | Reserved                      |                | ACPI Mode                         |                |

**Reserved** registers are hardwired to “0”. All data written to these registers are discarded. The values read from these registers are all zero.

DS-1 can be accessed by using any bus width, 8-bit, 16-bit or 32-bit.

## 00 - 01h: Vendor ID

Read Only

Default: 1073h

Access Bus Width: 8, 16, 32-bit

| b15       | b14 | b13 | b12 | b11 | b10 | b9 | b8 | b7 | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
|-----------|-----|-----|-----|-----|-----|----|----|----|----|----|----|----|----|----|----|
| Vendor ID |     |     |     |     |     |    |    |    |    |    |    |    |    |    |    |

### b[15:0] .....Vendor ID

This register contains the YAMAHA Vendor ID registered in Revision 2.1. This register is hardwired to 1073h.

## 02 - 03h: Device ID

Read Only

Default: 000Dh

Access Bus Width: 8, 16, 32-bit

| b15       | b14 | b13 | b12 | b11 | b10 | b9 | b8 | b7 | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
|-----------|-----|-----|-----|-----|-----|----|----|----|----|----|----|----|----|----|----|
| Device ID |     |     |     |     |     |    |    |    |    |    |    |    |    |    |    |

### b[15:0] .....Device ID

This register contains the Device ID of DS-1. This register is hardwired to 000Dh.

## 04 - 05h: Command

Read / Write

Default: 0000h

Access Bus Width: 8, 16, 32-bit

| b15 | b14 | b13 | b12 | b11 | b10 | b9 | b8  | b7 | b6  | b5 | b4 | b3 | b2  | b1 | b0 |
|-----|-----|-----|-----|-----|-----|----|-----|----|-----|----|----|----|-----|----|----|
| -   | -   | -   | -   | -   | -   | -  | SER | -  | PER | -  | -  | -  | BME | MS | -  |

### b1.....MS: Memory Space

This bit enables DS-1 to response to Memory Space Access.

“0”: DS-1 ignores Memory Space Access. (default)

“1”: DS-1 responds to Memory Space Access.

### b2.....BME: Bus Master Enable

This bit enables DS-1 to act as a master device on the PCI bus.

“0”: Do not set DS-1 to be the master device. (default)

“1”: Set DS-1 to be the master device.

### b6.....PER: Parity Error Response

This bit enables DS-1 responses to Parity Error.

“0”: DS-1 ignores all parity errors.

“1”: DS-1 performs error operation when DS-1 detects a parity error.

## b8.....SER: SERR# Enable

This bit enables DS-1 to drive SERR#.

“0”: Do not drive SERR#. (default)

“1”: Drives SERR# when DS-1 detects an Address Parity Error on normal target cycle or a Data Parity Error on special cycle.

## 06 - 07h: Status

Read / Write Clear

Default: 0210h

Access Bus Width: 8, 16, 32-bit

| b15 | b14 | b13 | b12 | b11 | b10  | b9  | b8 | b7 | b6 | b5  | b4 | b3 | b2 | b1 | b0 |
|-----|-----|-----|-----|-----|------|-----|----|----|----|-----|----|----|----|----|----|
| DPE | SSE | RMA | RTA | STA | DEVT | DPD | -  | -  | -  | CAP | -  | -  | -  | -  | -  |

## b4.....CAP: Capability (Read Only)

This bit indicates that DS-1 supports the capability register. This bit is read only. When 58-59h : ACPI Mode register, ACPI bit is “0”, the bit is “1”. When ACPI bit is “1”, the bit is “0”.

## b8.....DPD: Data Parity Error Detected

This bit indicates that DS-1 detects a Data Parity Error during a PCI master cycle.

## b[10:9] .....DEVT: DEVSEL Timing

This bit indicates that the decoding speed of DS-1 is Medium.

## b11.....STA: Signaled Target Abort

This bit indicates that DS-1 terminates a transaction with Target Abort during a target cycle.

## b12.....RTA: Received Target Abort

This bit indicates that a transaction is terminated with Target Abort while DS-1 is in the master memory cycle.

## b13.....RMA: Received Master Abort

This bit indicates that a transaction is terminated with Master Abort while DS-1 is in the master memory cycle.

## b14.....SSE: Signaled System Error

This bit indicates that DS-1 asserts SERR#.

## b15.....DPE: Detected Parity Error

This bit indicates that DS-1 detects Address Parity Error or Data Parity Error during a transaction.

## **08h: Revision ID**

Read Only

Default: 03h

Access Bus Width: 8, 16, 32-bit

|             |    |    |    |    |    |    |    |
|-------------|----|----|----|----|----|----|----|
| b7          | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
| Revision ID |    |    |    |    |    |    |    |

### **b[7:0] .....Revision ID**

This register contains the revision number of DS-1. This register is hardwired to **03h**.

## **09h: Programming Interface**

Read Only

Default: 00h

Access Bus Width: 8, 16, 32-bit

|                       |    |    |    |    |    |    |    |
|-----------------------|----|----|----|----|----|----|----|
| b7                    | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
| Programming Interface |    |    |    |    |    |    |    |

### **b[7:0] .....Programming Interface**

This register indicates the programming interface of DS-1. This register is hardwired to **00h**.

## **0Ah: Sub-class Code**

Read Only

Default: 01h

Access Bus Width: 8, 16, 32-bit

|                |    |    |    |    |    |    |    |
|----------------|----|----|----|----|----|----|----|
| b7             | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
| Sub-class Code |    |    |    |    |    |    |    |

### **b[7:0] .....Sub-class Code**

This register indicates the sub-class of DS-1. This register is hardwired to **01h**. DS-1 belongs to the **Audio** Sub-class.

## **0Bh: Base Class Code**

Read Only

Default: 04h

Access Bus Width: 8, 16, 32-bit

|                 |    |    |    |    |    |    |    |
|-----------------|----|----|----|----|----|----|----|
| b7              | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
| Base Class Code |    |    |    |    |    |    |    |

### **b[7:0] .....Base Class Code**

This register indicates the base class of DS-1. This register is hardwired to **04h**. DS-1 belongs to the **Multimedia** Base Class.

## **0Dh: Latency Timer**

Read / Write

Default: 00h

Access Bus Width: 8, 16, 32-bit

| b7            | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
|---------------|----|----|----|----|----|----|----|
| Latency Timer |    |    |    |    |    |    |    |

### **b[7:0] .....Latency Timer**

When DS-1 becomes a Bus Master device, this register indicates the initial value of the Master Latency Timer.

## **0Eh: Header Type**

Read Only

Default: 00h

Access Bus Width: 8, 16, 32-bit

| b7          | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
|-------------|----|----|----|----|----|----|----|
| Header Type |    |    |    |    |    |    |    |

### **b[7:0] .....Header Type**

This register indicates the device type of DS-1. This is hardwired to **00h**.

## **10 - 13h: PCI Audio Memory Base Address**

Read / Write

Default: 00000000h

Access Bus Width: 8, 16, 32-bit

| b15          | b14 | b13 | b12 | b11 | b10 | b9  | b8  | b7  | b6  | b5  | b4  | b3  | b2  | b1  | b0  |
|--------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| MBA          | -   | -   | -   | -   | -   | -   | -   | -   | -   | -   | -   | -   | -   | -   | -   |
| b31          | b30 | b29 | b28 | b27 | b26 | b25 | b24 | b23 | b22 | b21 | b20 | b19 | b18 | b17 | b16 |
| MBA (higher) |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |

### **b[31:15] .....MBA: Memory Base Address**

This register indicates the physical Memory Base address of the PCI Audio registers in DS-1. The base address can be located anywhere in the 32-bit address space. Data in the DS-1 register is not prefetchable.

DS-1 needs 32768-bytes of memory address space.

## **2C-2Dh: Subsystem Vendor ID**

Read Only

Default: 1073h

Access Bus Width: 8, 16, 32-bit

|                     |     |     |     |     |     |    |    |    |    |    |    |    |    |    |    |
|---------------------|-----|-----|-----|-----|-----|----|----|----|----|----|----|----|----|----|----|
| b15                 | b14 | b13 | b12 | b11 | b10 | b9 | b8 | b7 | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
| Subsystem Vendor ID |     |     |     |     |     |    |    |    |    |    |    |    |    |    |    |

### **b[15:0] .....Subsystem Vendor ID**

This register contains the Subsystem Vendor ID. In general, this ID is used to distinguish adapters or systems made by different IHVs using the same chip by the same vendor. This register is read only. To write the IHV's Vendor ID, use 44-45h (Subsystem Vendor ID Write Register). IHVs must change this ID to their Vendor ID in the BIOS POST routine.

In case of the system such as Sound Card which BIOS can not control, this ID can be changed by connecting EEPROM externally. Then, Subsystem Vendor ID Write Register is invalid.

In case EEPROM is not externally, the default value is the YAMAHA's Vendor ID, **1073h**.

## **2E-2Fh: Subsystem ID**

Read Only

Default: 000Dh

Access Bus Width: 8, 16, 32-bit

|              |     |     |     |     |     |    |    |    |    |    |    |    |    |    |    |
|--------------|-----|-----|-----|-----|-----|----|----|----|----|----|----|----|----|----|----|
| b15          | b14 | b13 | b12 | b11 | b10 | b9 | b8 | b7 | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
| Subsystem ID |     |     |     |     |     |    |    |    |    |    |    |    |    |    |    |

### **b[15:0] .....Subsystem ID**

This register contains the Subsystem ID. In general, this ID is used to distinguish adapters or systems made by different IHVs using the same chip by the same vendor. This register is read only. To write the IHV's Device ID, use 46-47h (Subsystem ID Write Register). IHVs must change this ID to their ID in the BIOS POST routine.

In case of the system such as Sound Card which BIOS can not control, this ID can be changed by connecting EEPROM externally. Then, Subsystem ID Write Register is invalid.

In case EEPROM is not externally, the default value is the YAMAHA's Device ID, **000Dh**.

## **34h: Capability Register Pointer**

Read Only

Default: 50h

Access Bus Width: 8, 16, 32-bit

|                             |    |    |    |    |    |    |    |
|-----------------------------|----|----|----|----|----|----|----|
| b7                          | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
| Capability Register Pointer |    |    |    |    |    |    |    |

### **b[7:0] .....Capability Register Pointer**

This register indicates the offset address of the Capabilities register in the PCI Configuration register when 58-59h: ACPI Mode register, ACPI bit is "0". DS-1 provides PCI Bus Power Management registers as the capabilities. The Power Management registers are mapped to 50h - 57h in the PCI Configuration register, and this register indicates "50h".

When ACPI bit is "1", this register indicates "00h".

## **3Ch: Interrupt Line**

Read / Write

Default: 00h

Access Bus Width: 8, 16, 32-bit

|                |    |    |    |    |    |    |    |
|----------------|----|----|----|----|----|----|----|
| b7             | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
| Interrupt Line |    |    |    |    |    |    |    |

### **b[7:0] .....Interrupt Line**

This register indicates the interrupt channel that INTA# is assigned to.

## **3Dh: Interrupt Pin**

Read Only

Default: 01h

Access Bus Width: 8, 16, 32-bit

|               |    |    |    |    |    |    |    |
|---------------|----|----|----|----|----|----|----|
| b7            | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
| Interrupt Pin |    |    |    |    |    |    |    |

### **b[7:0] .....Interrupt Pin**

DS-1 supports INTA# only. This register is hardwired to 01h.

## **3Eh: Minimum Grant**

Read Only

Default: 05h

Access Bus Width: 8, 16, 32-bit

|               |    |    |    |    |    |    |    |
|---------------|----|----|----|----|----|----|----|
| b7            | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
| Minimum Grant |    |    |    |    |    |    |    |

### **b[7:0] .....Minimum Grant**

This register indicates the length of the burst period required by DS-1.

This register is hardwired to **05h**.

## **3Fh: Maximum Latency**

Read Only

Default: 19h

Access Bus Width: 8, 16, 32-bit

|                 |    |    |    |    |    |    |    |
|-----------------|----|----|----|----|----|----|----|
| b7              | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
| Maximum Latency |    |    |    |    |    |    |    |

### **b[7:0] .....Maximum Latency**

This register indicates how often DS-1 generates the Bus Master Request.

This register is hardwired to **19h**.

## 40 - 41h: Legacy Audio Control

Read / Write

Default: 907Fh

Access Bus Width: 8, 16, 32-bit

| b15 | b14  | b13    | b12 | b11 | b10   | b9 | b8 | b7   | b6 | b5  | b4   | b3  | b2   | b1   | b0   |
|-----|------|--------|-----|-----|-------|----|----|------|----|-----|------|-----|------|------|------|
| LAD | SIEN | MPUIRQ |     |     | SBIRQ |    |    | SDMA |    | I/O | MIEN | MEN | GPEN | FMEN | SBEN |

### b0.....SBEN: Sound Blaster Enable

This bit enables the mapping of the Sound Blaster Pro block in the I/O space specified by the SBIO bits, when LAD is set to “0”. The FM Synthesizer registers can be accessed via SB I/O space, while the SB block is enabled, even if FMEN is set to “0”.

“0”: Disable the mapping of the SB block to the I/O space

“1”: Enable the mapping of the SB block to the I/O space (default)

### b1.....FMEN: FM Synthesizer Enable

This bit enables the mapping of the FM Synthesizer block in the I/O space specified by the FMIO bits, when LAD is set to “0”. FM Synthesizer registers can be accessed via SB I/O space, while the SB block is enabled, even if FMEN is set to “0”.

“0”: Disable the mapping of the FM Synthesizer block to the FMIO space

“1”: Enable the mapping of the FM Synthesizer block to the FMIO space (default)

After setting FMEN to “1”, about 100 msec is necessary before accessing these I/O space.

### b2.....GPEN: Gameport Enable

This bit enables the mapping of the Joystick block in the I/O space specified by the JSIO bits, when LAD is set to “0”.

“0”: Disable the mapping of the Joystick block

“1”: Enable the mapping of the Joystick block (default)

### b3.....MEN: MPU401 Enable

This bit enables the mapping of the MPU401 block in the I/O space specified by the MPUIO bits, when LAD is set to “0”.

“0”: Disable the mapping of the MPU401 block

“1”: Enable the mapping of the MPU401 block (default)

### b4.....MIEN: MPU401 IRQ Enable

This bit enables the interrupt service of MPU401, when LAD is set to “0” and MEN is set to “1”. MPU401 generates an interrupt signal when it receives any kind of MIDI data from the RXD pin.

“0”: The MPU401 block can not use the interrupt service.

“1”: The MPU401 block can use interrupt signals determined by the MPUIRQ bits. (default)

### b5.....I/O: I/O Address Aliasing Control

This bit selects the number of bits to decode for the I/O address of each block.

“0”: 16-bit address decode

“1”: 10-bit address decode (default)

## **b[7:6] .....SDMA: Sound Blaster DMA-8 Channel Select**

These bits select the DMA channel for the Sound Blaster Pro block.

|      |          |           |
|------|----------|-----------|
| "0": | DMA ch0  |           |
| "1": | DMA ch1  | (default) |
| "2": | reserved |           |
| "3": | DMA ch3  |           |

## **b[10:8] .....SBIRQ: Sound Blaster IRQ Channel Select**

These bits select the interrupt channel for the Sound Blaster Pro block.

|            |           |           |
|------------|-----------|-----------|
| "0":       | IRQ5      | (default) |
| "1":       | IRQ7      |           |
| "2":       | IRQ9      |           |
| "3":       | IRQ10     |           |
| "4":       | IRQ11     |           |
| "5" - "7": | reserved. |           |

## **b[13:11] .....MPUIRQ: MPU401 IRQ Channel Select**

When MIEN is set to "1", these bits select the interrupt channel for the MPU401 block.

|            |          |           |
|------------|----------|-----------|
| "0":       | IRQ5     |           |
| "1":       | IRQ7     |           |
| "2":       | IRQ9     | (default) |
| "3":       | IRQ10    |           |
| "4":       | IRQ11    |           |
| "5" - "7": | reserved |           |

Same interrupt channels can be assigned to SBIRQ and MPUIRQ.

## **b14.....SIEN: Serialized IRQ enable**

DS-1 supports 3 types of interrupt protocols: PCI interrupt (INTA#), Legacy interrupt (IRQs) and Serialized IRQ. The interrupt protocol is selected with IMOD and SIEN as follows.

The interrupt channels for IRQs and Serialized IRQ are determined by SBIRQ and MPUIRQ,. Only one protocol can be used at once.

| SIEN | IMOD | Interrupt protocol      |           |
|------|------|-------------------------|-----------|
| 0    | 0    | Legacy interrupt (IRQs) | (default) |
| 0    | 1    | PCI interrupt (INTA#)   |           |
| 1    | *    | Serialized IRQ          |           |

## **b15.....LAD: Legacy Audio Disable**

This bit disables the Legacy Audio block.

|      |                                 |           |
|------|---------------------------------|-----------|
| "0": | Enables the Legacy Audio block  |           |
| "1": | Disables the Legacy Audio block | (default) |

When this bit is set to "1", DS-1 does not respond to the I/O Target transaction for legacy I/O address on the PCI bus.

## 42 - 43h: Extended Legacy Audio Control

Read / Write

Default: 0000h

Access Bus Width: 8, 16, 32-bit

| b15  | b14   | b13 | b12  | b11 | b10 | b9 | b8   | b7   | b6 | b5    | b4 | b3   | b2 | b1   | b0 |
|------|-------|-----|------|-----|-----|----|------|------|----|-------|----|------|----|------|----|
| IMOD | SBVER |     | SMOD |     | -   | -  | MAIM | JSIO |    | MPUIO |    | SBIO |    | FMIO |    |

### b[1:0] .....FMIO: FM I/O Address allocation

These bits determine the base I/O address for the of the FM Synthesizer block (FMBase).

FM Synthesizer block uses 4 bytes in the I/O address space.

|      |      |           |
|------|------|-----------|
| "0": | 388h | (default) |
| "1": | 398h |           |
| "2": | 3A0h |           |
| "3": | 3A8h |           |

### b[3:2] .....SBIO: SB I/O Address allocation

These bits determine the base I/O address for the Sound Blaster Pro block (SBBase). This block uses 16 bytes in the I/O address space.

|      |      |           |
|------|------|-----------|
| "0": | 220h | (default) |
| "1": | 240h |           |
| "2": | 260h |           |
| "3": | 280h |           |

### b[5:4] .....MPUIO: MPU I/O Address allocation

These bits determine the base I/O address for the MPU401 block (MPUBase). This block uses 2 bytes in the I/O address space.

|      |      |           |
|------|------|-----------|
| "0": | 330h | (default) |
| "1": | 300h |           |
| "2": | 332h |           |
| "3": | 334h |           |

### b[7:6] .....JSIO: Joystick I/O Address allocation

These bits determine the base I/O address for the Joystick block (JSBase). This block uses 1 byte in the I/O address space.

|      |      |           |
|------|------|-----------|
| "0": | 201h | (default) |
| "1": | 202h |           |
| "2": | 204h |           |
| "3": | 205h |           |

### b8.....MAIM: MPU401 Acknowledge Interrupt Mask

This bit determine whether interrupt is asserted when the acknowledge, which is occurred by changing MPU401 mode form default to UART, is returned.

|      |                                                         |           |
|------|---------------------------------------------------------|-----------|
| "0": | Interrupt is asserted when the acknowledge is returned. | (default) |
| "1": | Interrupt is masked when the acknowledge is returned.   |           |

## b[12:11] .....SMOD: SB DMA mode

These bits determine the protocol to achieve the DMAC(8237) function on the PCI bus.

|      |                 |           |
|------|-----------------|-----------|
| "0": | PC/PCI          | (default) |
| "1": | reserved        |           |
| "2": | Distributed DMA |           |
| "3": | reserved        |           |

## b[14:13] .....SBVER: SB Version Select

These bits set the version of the SB Pro DSP. The value set in these bits is returned by sending the E1h DSP command.

|      |          |           |
|------|----------|-----------|
| "0": | ver 3.01 | (default) |
| "1": | ver 2.01 |           |
| "2": | ver 1.05 |           |
| "3": | reserved |           |

## b15.....IMOD: Legacy IRQ mode

DS-1 supports 3 types of interrupt protocols: PCI interrupt (INTA#), Legacy interrupt (IRQs) and Serialized IRQ. The interrupt protocol is selected with IMOD and SIEN as follows.

| SIEN | IMOD | Interrupt protocol                |
|------|------|-----------------------------------|
| 0    | 0    | Legacy interrupt (IRQs) (default) |
| 0    | 1    | PCI interrupt (INTA#)             |
| 1    | *    | Serialized IRQ                    |

## 44-45h: Subsystem Vendor ID Write Register

Read / Write

Default: 1073h

Access Bus Width: 16-bit

| b15                       | b14 | b13 | b12 | b11 | b10 | b9 | b8 | b7 | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
|---------------------------|-----|-----|-----|-----|-----|----|----|----|----|----|----|----|----|----|----|
| Subsystem Vendor ID Write |     |     |     |     |     |    |    |    |    |    |    |    |    |    |    |

## b[15:0] .....Subsystem Vendor ID Write Register

This register sets the Subsystem Vendor ID that is read from 2C-2Dh (Subsystem Vendor ID register).

The default value is the YAMAHA Vendor ID, **1073h**. IHVs must change this ID to their Vendor ID in the BIOS POST routine.

In case EEPROM connects externally, this register is invalid, and do not reflect to Subsystem Vendor ID.

## 46-47h: Subsystem ID Write Register

Read / Write

Default: 000Dh

Access Bus Width: 16-bit

| b15                | b14 | b13 | b12 | b11 | b10 | b9 | b8 | b7 | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
|--------------------|-----|-----|-----|-----|-----|----|----|----|----|----|----|----|----|----|----|
| Subsystem ID Write |     |     |     |     |     |    |    |    |    |    |    |    |    |    |    |

### b[15:0] .....Subsystem ID Write Register

This register sets the Subsystem ID that is read from 2E-2Fh (Subsystem ID register).

The default value is the DS-1 Device ID, **000Dh**. IHVs must change this ID to their ID in the BIOS POST routine.

In case EEPROM connects externally, this register is invalid, and do not reflect to Subsystem ID.

## 48-49h: DS-1 Control Register

Read / Write

Default: 0001h

Access Bus Width: 8, 16, 32-bit

| b15 | b14 | b13 | b12 | b11 | b10 | b9 | b8 | b7 | b6 | b5 | b4 | b3 | b2 | b1   | b0   |
|-----|-----|-----|-----|-----|-----|----|----|----|----|----|----|----|----|------|------|
| -   | -   | -   | -   | -   | -   | -  | -  | -  | -  | -  | -  | -  | -  | XRST | CRST |

### b0 .....CRST: AC'97 Software Reset Signal Control

This bit controls the CRST# signal.

“0”: Inactive (CRST#=High)

“1”: Active (CRST#=Low) (default)

### b1 .....XRST: Local Device Software Reset Signal Control

This bit controls the XRST# signal.

“0”: Inactive (XRST#=High) (default)

“1”: Active (XRST#=Low)

## 4A-4Bh: DS-1 Power Control Register

Read / Write

Default: 0000h

Access Bus Width: 8, 16, 32-bit

| b15 | b14 | b13 | b12 | b11 | b10 | b9  | b8  | b7 | b6 | b5  | b4   | b3   | b2    | b1    | b0  |
|-----|-----|-----|-----|-----|-----|-----|-----|----|----|-----|------|------|-------|-------|-----|
| PR7 | PR6 | PR5 | PR4 | PR3 | PR2 | PR1 | PR0 | -  | -  | PSN | PSL1 | PSL0 | DPLL1 | DPLL0 | DMC |

### b0 .....DMC: Disable Master Clock Oscillation

Setting this bit to “1” disables the oscillation of the Master Clock (24.576 MHz).

“0”: Normal (default)

“1”: Disable

### b1 .....DPLL0: Disable PLL0 Clock Oscillation

Setting this bit to “1” disables the oscillation of PLL for the Legacy Audio function.

“0”: Normal (default)

“1”: Disable

## **b2.....DPLL1: Disable PLL1 Clock Oscillation**

Setting this bit to “1” disables the oscillation of PLL for the PCI Audio function.

“0”: Normal (default)

“1”: Disable

## **b3.....PSL0: Power Save Legacy Audio Block 0**

Setting this bit to “1” stops providing the clock with the Legacy Audio function block 0. This block includes FM Synthesizer and SB Pro engines.

“0”: Normal (default)

“1”: Power Save

## **b4.....PSL1: Power Save Legacy Audio Block 1**

Setting this bit to “1” stops providing the clock with the Legacy Audio function block 1. This block includes MPU401 and Joystick.

“0”: Normal (default)

“1”: Power Save

## **b5.....PSN: Power Save PCI Audio block**

Setting this bit to “1” stops providing the clock with the PCI Audio function block. This block includes PCI Audio, SRC, AC3F2 I/F, AC'97 I/F, H/W Vol. and SPDIF.

“0”: Normal (default)

“1”: Power Save

## **b8.....PR0: AC'97 Power down Control 0**

This bit controls the power state of the **ADC and Input Mux** in AC'97.

“0”: Normal (default)

“1”: Power down

## **b9.....PR1: AC'97 Power down Control 1**

This bit controls the power state of the **DAC** in AC'97.

“0”: Normal (default)

“1”: Power down

## **b10.....PR2: AC'97 Power down Control 2**

This bit controls the power state of the **Analog Mixer (Vref still on)** in AC'97. This power state retains the Reference Voltage of AC'97.

“0”: Normal (default)

“1”: Power down

## **b11.....PR3: AC'97 Power down Control 3**

This bit controls the power state of the **Analog Mixer (Vref off)** in AC'97. This power state removes Reference Voltage of AC'97.

“0”: Normal (default)

“1”: Power down

## b12.....PR4: AC'97 Power down Control 4

This bit controls the power state of the **AC-link** in AC'97.

“0”: Normal (default)

“1”: Power down

## b13.....PR5: AC'97 Power down Control 5

Setting this bit to “1” disables the internal clock of AC'97. In case AC'97 is used with DS-1, the master clock is supplied from DS-1. Therefore, when the clock of AC'97 is stopped completely, set both PR5 and PSN bits to “1”.

“0”: Normal (default)

“1”: Disable

## b[15:14] .....AC'97 Power down Control 6 and 7

These bits control PR6 and PR7 status of the power control register in AC'97.

- Set DPLL0, DPLL1, PSL0, PSL1 and PSN bits to “1”, when DMC bit is set to “1”.
- Set PSL0 and PSL1 bits to “1”, when DPLL0 bit is set to “1”.
- Set PSN bit to “1”, when DPLL1 bit is set to “1”.

## 4C-4Dh: D-DMA Slave Configuration

Read / Write

Default: 0000h

Access Bus Width: 8, 16, 32-bit

| b15          | b14 | b13 | b12 | b11 | b10 | b9 | b8 | b7 | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
|--------------|-----|-----|-----|-----|-----|----|----|----|----|----|----|----|----|----|----|
| Base Address |     |     |     |     |     |    |    |    |    |    |    | EA | TS |    | CE |

### b0.....CE: Channel Enable

This bit enables the Distributed DMA function.

“0”: Disable Distributed DMA (default)

“1”: Enable Distributed DMA

### b[2:1] .....TS: Transfer Size

These bits indicate the size of the DMA transfer. Since DS-1 supports only 8-bit DMA transfer, the bits are hardwired to 00b.

### b3.....EA: Extended Address

DS-1 does not support extended address mode. This bit is hardwired to 0b.

### b[15:4] .....Base Address : D-DMA Slave Base Address

These bits indicate the D-DMA slave base address.

## 50h: Capability ID

Read Only

Default: 01h

Access Bus Width: 8, 16, 32-bit

| b7            | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
|---------------|----|----|----|----|----|----|----|
| Capability ID |    |    |    |    |    |    |    |

### b[7:0] .....Capability ID: Capability Identifier

This register indicates that the new capability register is for Power Management control. This register is hardwired to **01h**.

## 51h: Next Item Pointer

Read Only

Default: 00h

Access Bus Width: 8, 16, 32-bit

| b7                | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
|-------------------|----|----|----|----|----|----|----|
| Next Item Pointer |    |    |    |    |    |    |    |

**b[7:0] .....Next Item Pointer**

DS-1 does not provide other new capability besides Power Management. This register is hardwired to 00h.

## 52-53h: Power Management Capabilities

Read Only

Default: 0401h

Access Bus Width: 8, 16, 32-bit

| b15 | b14 | b13 | b12 | b11 | b10 | b9  | b8 | b7 | b6 | b5 | b4 | b3 | b2 | b1      | b0 |
|-----|-----|-----|-----|-----|-----|-----|----|----|----|----|----|----|----|---------|----|
| -   | -   | -   | -   | -   | D2S | D1S | -  | -  | -  | -  | -  | -  | -  | Version |    |

**b[2:0] .....Version**

These bits contain the revision number of the Power Management Interface Specification. They are hardwired to 001b.

**b9.....D1S: D1 Support**

This bit indicates whether DS-1 support “D1” of the power state. Only when EEPROM connects externally, this bit can be set to “1”, and D1 state can support. When EEPROM does not connect externally, use ACPI mode (58-59h: ACPI Mode Register, ACPI bit) to support D1 state.

The default value is “0”.

**b10.....D2S: D2 Support**

This bit indicates that DS-1 support “D2” of the power state. It is hardwired to “1”.

## 54-55h: Power Management Control / Status

Read / Write

Default: 0000h

Access Bus Width: 8, 16, 32-bit

| b15 | b14 | b13 | b12 | b11 | b10 | b9 | b8 | b7 | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
|-----|-----|-----|-----|-----|-----|----|----|----|----|----|----|----|----|----|----|
| -   | -   | -   | -   | -   | -   | -  | -  | -  | -  | -  | -  | -  | -  | -  | PS |

### b[1:0] .....PS: Power State

These bits determine the power state of DS-1. DS-1 supports the following power states:

- “0”: D0
- “1”: D1 (not supported)
- “2”: D2
- “3”: D3<sub>hot</sub>

When the power state is changed from D3<sub>hot</sub> to D0, DS-1 resets the PCI Configuration register 00-3Fh. DS-1 transits to D0 Uninitialized state.

Though the power state of this register is changed, the power consumption of DS-1 is not changed. To support low power, Windows driver controls DS-1 Power Control Register.

DS-1 can support the power state of D0, D1, D2 and D3 with ACPI. In this case, set ACPI bit (58-59h: ACPI Mode Register) to “1” to disable Capabilities of PCI Bus Power Management.

## 58-59h: ACPI Mode

Read / Write

Default: 0000h

Access Bus Width: 8, 16, 32-bit

| b15 | b14 | b13 | b12 | b11 | b10 | b9 | b8 | b7 | b6 | b5 | b4 | b3 | b2 | b1 | b0   |
|-----|-----|-----|-----|-----|-----|----|----|----|----|----|----|----|----|----|------|
| -   | -   | -   | -   | -   | -   | -  | -  | -  | -  | -  | -  | -  | -  | -  | ACPI |

### b0 .....ACPI: ACPI Mode Select

This bit select either PCI Bus Power Management or ACPI Mode for power management of DS-1.

- “0”: PCI Bus Power Management is used. CAP bit (06-07h: Status Register) and Capabilities Pointer (34h) are enabled. (default)
- “1”: ACPI Mode is used. CAP bit and Capabilities Pointer are hardwired “0”, and disabled.

## 2. ISA Compatible Device

DS-1 contains the following functions to maintain the compatibility with the past ISA Sound Devices. These devices are considered Legacy devices and the functions are referred to as Legacy Audio.

Legacy Audio is independent from PCI Audio and can be used simultaneously.

The configuration is set in the Legacy Audio Control Register in the PCI Configuration Register space.

Basically, these registers are configured by the BIOS.

Also, logical device IDs are assigned to the devices to support Plug and Play. Yamaha defines the following logical IDs.

To control the device with the BIOS, the logical device IDs must be defined in the PnP BIOS extended ROM space. The logical IDs are determined by how it is configured. IDs and configuration are as follows.

| Logical Device ID | Functions used (Block) |        |                       |          |
|-------------------|------------------------|--------|-----------------------|----------|
|                   | FM <sup>(*)</sup>      | MPU401 | SB Pro <sup>(*)</sup> | Joystick |
| YMH0100           | O                      | O      | O                     |          |
| YMH0101           |                        |        |                       | O        |

\* The blocks pertain to the following.

FM: Points to the FM synthesizer mapped to AdLibBase (0x0388).

SB Pro: Points to the Voice Playback section only.

These devices are independent from each other, and can be Enabled/Disabled individually. However, both AdLib and Sound Blaster must be disabled to disable the internal FM Synthesizer. Disabling just AdLib only masks the access.

The driver by Yamaha supports only logical device ID, YMH0100. For YMH0101, use the driver provided by Microsoft.

DS-1 supports PC/PCI and D-DMA protocols to emulate the DMA of SB Pro on the PCI. In addition, DS-1 supports the old type of interrupts used by ISA and the Serialized IRQ protocol.

Yamaha recommends the combination of PC/PCI and Serialized IRQ. The system block diagram when using Intel chip set is shown below.

The PCI-to-ISA bridge needs to support PC/PCI. IRQ is directly connected to the IRQ input pins on the PCI-to-ISA bridge.

## 2-1. FM Synthesizer Block

FM Synthesizer Block is register compatible with YMF289B. However, Power Management register has been deleted because it is now controlled by the PCI Configuration Register.

The following shows the FMBase I/O map of FM Synthesizer.

|          |       |                                   |
|----------|-------|-----------------------------------|
| FMBase   | (R)   | Status Register port              |
| FMBase   | (W)   | Address port for Register Array 0 |
| FMBase+1 | (R/W) | Data port                         |
| FMBase+2 | (W)   | Address port for Register Array 1 |
| FMBase+3 | (R/W) | Data port                         |

The default FMBase value is 0x0388.

The following shows the FM Synthesizer Block registers.

### 2-1-1. Status Register

#### FM Synthesizer Status Register (RO):

| Address | D7  | D6  | D5  | D4 | D3 | D2   | D1 | D0   |
|---------|-----|-----|-----|----|----|------|----|------|
| xxh     | IRQ | FT1 | FT2 | -  | -  | BUSY | -  | BUSY |

## 2-1-2. FM Synthesizer Data Register

### FM Synthesizer Data Register Array 0 (R/W):

| Address                | D7        | D6  | D5  | D4    | D3   | D2  | D1        | D0  |
|------------------------|-----------|-----|-----|-------|------|-----|-----------|-----|
| 00-01h                 | LSI TEST  |     |     |       |      |     |           |     |
| 02h                    | TIMER 1   |     |     |       |      |     |           |     |
| 03h                    | TIMER 2   |     |     |       |      |     |           |     |

\*1 : 26h, 27h, 2Eh and 2Fh do not exist.

\*2 : 46h, 47h, 4Eh and 4Fh do not exist.

\*3 : 66h, 67h, 6Eh and 6Fh do not exist.

\*4 : 86h, 87h, 8Eh and 8Fh do not exist.

\*5 : E6h, E7h, EEh and EFh do not exist.

\*6 : The bits exist, but do not function.

## 2-2. Sound Blaster Pro Block

This block emulates the DSP commands of Sound Blaster and Sound Blaster Pro. Only playback functions are supported (record functions are not supported). However, to maintain compatibility for games, it is designed so that every DSP command receives a correct response.

The DMA transfer of this block uses PC/PCI or D-DMA protocol.

The following shows the SBBase I/O map of SB Pro.

|           |       |                                                  |
|-----------|-------|--------------------------------------------------|
| SBBase    | (R)   | FM Synthesizer Status port                       |
| SBBase    | (W)   | FM Synthesizer Address port for Register Array 0 |
| SBBase+1h | (R/W) | FM Synthesizer Data register                     |
| SBBase+2h | (W)   | FM Synthesizer Address port for Register Array 1 |
| SBBase+3h | (R/W) | FM Synthesizer Data port                         |
| SBBase+4h | (W)   | SB Mixer Address port                            |
| SBBase+5h | (R/W) | SB Mixer Data port                               |
| SBBase+6h | (W)   | SB DSP Reset port                                |
| SBBase+8h | (R)   | FM Synthesizer Status port                       |
| SBBase+8h | (W)   | FM Synthesizer Address port for Register Array 0 |
| SBBase+9h | (R/W) | FM Synthesizer Data port                         |
| SBBase+Ah | (R)   | DSP Read Data port                               |
| SBBase+Ch | (R)   | DSP Write-buffer status port                     |
| SBBase+Ch | (W)   | DSP Write Command/Data port                      |
| SBBase+Eh | (R)   | DSP Read-buffer status port                      |

## 2-2-1. DSP Command

The following shows the list of DSP Commands that are supported by the SB Pro engine. Both SB and SB Pro commands are supported.

| CMD     | Support | Function                                                                       |
|---------|---------|--------------------------------------------------------------------------------|
| 10h     | o       | 8bit direct mode single byte digitized sound output                            |
| 14h     | o       | 8bit single-cycle DMA mode digitized sound output                              |
| 16h     |         | 8bit to 2bit ADPCM single-cycle DMA mode digitized sound output                |
| 17h     |         | 8bit to 2bit ADPCM single-cycle DMA mode digitized sound output with ref. byte |
| 1Ch     | o       | 8bit auto-init DMA mode digitized sound output                                 |
| 1Fh     |         | 8bit to 2bit ADPCM auto-init DMA mode digitized sound output with ref. byte    |
| 20h(*1) | o       | 8bit direct mode single byte digitized sound input                             |
| 24h(*1) | o       | 8bit single-cycle DMA mode digitized sound input                               |
| 2Ch(*1) | o       | 8bit auto-init DMA mode digitized sound input                                  |
| 30h     | o       | Polling mode MIDI input                                                        |
| 31h     | o       | Interrupt mode MIDI input                                                      |
| 34h     | o       | UART polling mode MIDI I/O                                                     |
| 35h     | o       | UART interrupt mode MIDI I/O                                                   |
| 36h(*2) | o       | UART polling mode MIDI I/O with time stamping                                  |
| 37h(*2) | o       | UART interrupt mode MIDI I/O with time stamping                                |
| 38h     | o       | MIDI output                                                                    |
| 40h     | o       | Set digitized sound transfer Time Constant                                     |
| 48h     | o       | Set DSP block transfer size                                                    |
| 74h     | o       | 8bit to 4bit ADPCM single-cycle DMA mode digitized sound output                |
| 75h     | o       | 8bit to 4bit ADPCM single-cycle DMA mode digitized sound output with ref. byte |
| 76h     |         | 8bit to 3bit ADPCM single-cycle DAM mode digitized sound output                |
| 77h     |         | 8bit to 3bit ADPCM single-cycle DMA mode digitized sound output with ref. byte |
| 7Dh     | o       | 8bit to 4bit ADPCM auto-init DMA mode digitized sound output with ref. byte    |
| 7Fh     |         | 8bit to 3bit ADPCM auto-init DMA mode digitized sound output with ref. byte    |
| 80h     | o       | Pause DAC for a duration                                                       |
| 90h     | o       | 8bit high-speed auto-init DMA mode digitized sound output                      |
| 91h     | o       | 8bit high-speed single-cycle DMA mode digitized sound output                   |
| 98h(*1) | o       | 8bit high-speed auto-init DMA mode digitized sound input                       |
| 99h(*1) | o       | 8bit high-speed single-cycle DMA mode digitized sound input                    |
| A0h(*1) | o       | Set input mode to mono                                                         |
| A8h(*1) | o       | Set input mode to stereo                                                       |
| D0h     | o       | Pause 8bit DMA mode digitized sound I/O                                        |
| D1h(*3) | o       | Turn on speaker                                                                |
| D3h(*3) | o       | Turn off speaker                                                               |
| D4h     | o       | Continue 8bit DMA mode digitized sound I/O                                     |
| D8h     | o       | Get speaker status                                                             |
| DAh     | o       | Exit 8bit auto-init DMA mode digitized sound I/O                               |
| E1h     | o       | Get DSP version number                                                         |

Note:

(\*1) The SB Block responds correctly to the commands for recording and also executes the DMA transfer. 80h is always transferred.

(\*2) Only output is supported for this command.

(\*3) This command only changes Speaker Status (D8h).

Undocumented commands other than the ones listed above are also supported.

## 2-2-2. Sound Blaster Pro Mixer

The following shows the register map of the Mixer section of Sound Blaster Pro.

| Address | b7              | b6 | b5       | b4  | b3              | b2          | b1     | b0    | Remark           |
|---------|-----------------|----|----------|-----|-----------------|-------------|--------|-------|------------------|
| 00h     | Reset           |    |          |     |                 |             |        |       | SB Pro Mixer     |
| 04h     | Voice Volume L  |    |          | "1" | Voice Volume R  |             |        | "1"   |                  |
| 0Ah     | -               | -  | -        | "1" | -               | MIC Volume* |        |       |                  |
| 0Ch     | -               | -  | Ifilter* | "1" | Input Source*   |             |        | "1"   |                  |
| 0Eh     | -               | -  | Ofilter* | "1" | -               | -           | St. SW | "1"   |                  |
| 22h     | Master Volume L |    |          | "1" | Master Volume R |             |        | "1"   |                  |
| 26h     | MIDI Volume L   |    |          | "1" | MIDI Volume R   |             |        | "1"   |                  |
| 28h     | CD Volume L*    |    |          | "1" | CD Volume R*    |             |        | "1"   |                  |
| 2Eh     | Line Volume L * |    |          | "1" | Line Volume R*  |             |        | "1"   |                  |
| F0h     | SBPDA           | -  | -        | -   | SS              | SM          | SE     | SBPDR |                  |
| F1h     | SCAN DATA       |    |          |     |                 |             |        |       | Suspend / Resume |
| F8h     | -               | -  | -        | -   | -               | -           | -      | SBI   | IRQ Status       |

The registers marked with \* exist, but do not function.

DS-1 does not have the circuit that corresponds to the SB Mixer. Therefore, the volume settings on the SB Mixer are converted to the DSP coefficients of DS-1 or to AC'97 register values.

The conversion for each case is described below.

### (1) SB Mixer → DSP

The volume of master, MIDI and Voice, are applied to this case.

When the SB register is set, a 14-bit coefficient value is determined from the following conversion table and used as the DSP coefficient. The attenuation value of Master Volume, MIDI, and voice are summed together to obtain the coefficient.

These volumes cannot be controlled from PCI Audio block.

## (1) Volume for MIDI

|                   |   | MIDI Vol. (26h) |       |       |       |       |       |       |       |
|-------------------|---|-----------------|-------|-------|-------|-------|-------|-------|-------|
|                   |   | 0               | 1     | 2     | 3     | 4     | 5     | 6     | 7     |
| Master Vol. (22h) | 0 | mute            | mute  | mute  | mute  | mute  | mute  | mute  | mute  |
|                   |   | 0000h           | 0000h | 0000h | 0000h | 0000h | 0000h | 0000h | 0000h |
|                   | 1 | mute            | -52dB | -42dB | -36dB | -32dB | -30dB | -28dB | -26dB |
|                   |   | 0000h           | 0029h | 0082h | 0103h | 019Bh | 0206h | 028Ch | 0335h |
|                   | 2 | mute            | -42dB | -32dB | -26dB | -22dB | -20dB | -18dB | -16dB |
|                   |   | 0000h           | 0082h | 019Bh | 0335h | 0515h | 0666h | 080Eh | 0A24h |
|                   | 3 | mute            | -36dB | -26dB | -20dB | -16dB | -14dB | -12dB | -10dB |
|                   |   | 0000h           | 0103h | 0335h | 0666h | 0A24h | 0CC5h | 1013h | 143Dh |
|                   | 4 | mute            | -32dB | -22dB | -16dB | -12dB | -10dB | -8dB  | -6dB  |
|                   |   | 0000h           | 019Bh | 0515h | 0A24h | 1013h | 143Dh | 197Ah | 2013h |
|                   | 5 | mute            | -30dB | -20dB | -14dB | -10dB | -8dB  | -6dB  | -4dB  |
|                   |   | 0000h           | 0206h | 0666h | 0CC5h | 143Dh | 197Ah | 2013h | 2861h |
|                   | 6 | mute            | -28dB | -18dB | -12dB | -8dB  | -6dB  | -4dB  | -2dB  |
|                   |   | 0000h           | 028Ch | 080Eh | 1013h | 197Ah | 2013h | 2861h | 32D6h |
|                   | 7 | mute            | -26dB | -16dB | -10dB | -6dB  | -4dB  | -2dB  | 0dB   |
|                   |   | 0000h           | 0335h | 0A24h | 143Dh | 2013h | 2861h | 32D6h | 3FFFh |

The default is Master = 4, MIDI = 4 (-12dB).

## (2) Volume for Voice

|                   |   | Voice Vol. (04h) |       |       |       |       |       |       |        |
|-------------------|---|------------------|-------|-------|-------|-------|-------|-------|--------|
|                   |   | 0                | 1     | 2     | 3     | 4     | 5     | 6     | 7      |
| Master Vol. (22h) | 0 | mute             | mute  | mute  | mute  | mute  | mute  | mute  | mute   |
|                   |   | 0000h            | 0000h | 0000h | 0000h | 0000h | 0000h | 0000h | 0000h  |
|                   | 1 | mute             | -56dB | -46dB | -40dB | -36dB | -34dB | -32dB | -30dB  |
|                   |   | 0000h            | 0019h | 0052h | 00A3h | 0103h | 0146h | 019Bh | 0206h  |
|                   | 2 | mute             | -46dB | -36dB | -30dB | -26dB | -24dB | -22dB | -20dB  |
|                   |   | 0000h            | 0052h | 0103h | 0206h | 0335h | 0409h | 0515h | 0666Eh |
|                   | 3 | mute             | -40dB | -30dB | -24dB | -20dB | -18dB | -16dB | -14dB  |
|                   |   | 0000h            | 00A3h | 0206h | 0409h | 0666h | 080Eh | 0A24h | 0CC5h  |
|                   | 4 | mute             | -36dB | -26dB | -20dB | -16dB | -14dB | -12dB | -10dB  |
|                   |   | 0000h            | 0103h | 0335h | 0666h | 0A24h | 0CC5h | 1013h | 143Dh  |
|                   | 5 | mute             | -34dB | -24dB | -18dB | -14dB | -12dB | -10dB | -8dB   |
|                   |   | 0000h            | 0146h | 0409h | 080Eh | 0CC5h | 1013h | 143Dh | 197Ah  |
|                   | 6 | mute             | -32dB | -22dB | -16dB | -12dB | -10dB | -8dB  | -6dB   |
|                   |   | 0000h            | 019Bh | 0515h | 0A24h | 1013h | 143Dh | 197Ah | 2013h  |
|                   | 7 | mute             | -30dB | -20dB | -14dB | -10dB | -8dB  | -6dB  | -4dB   |
|                   |   | 0000h            | 0206h | 0666h | 0CC5h | 143Dh | 187Ah | 2013h | 2861h  |

The default is Master = 4, Voice = 4 (-16dB).

## (2) SB Mixer → AC'97

The volume of CD, Line and MIC are applied to this case. AC'97 volume are not updated automatically when these values are changed. Thus, the SB Mixer values need to be written to the AC'97 register with the software.

## 2-2-3. SB Suspend / Resume

The SB block can read the internal state as to support Suspend and Resume functions. The internal state is made up of 218 flip flops. To read the state, these states are shifted in order and read 8 bits at a time from the SCAN DATA register.

These registers are mapped to the SB Mixer space (see SB Mixer Register map). The registers have the following functions.

### **F0h: Scan In/ Out Control**

Read / Write

Default: 00h

| b7    | b6 | b5 | b4 | b3 | b2 | b1 | b0    |
|-------|----|----|----|----|----|----|-------|
| SBPDA | -  | -  | -  | SS | SM | SE | SBPDR |

#### **b0.....SBPDR: Sound Blaster Power Down Request**

This bit stops the internal state of the Sound Blaster block.

“0”: Normal (default)

“1”: Stop

#### **b1.....SE: Scan Enable**

This bit Shifts the internal state by 1 bit. Setting a “1” followed by a “0” shifts the internal state.

#### **b2.....SM: Scan Mode**

This bit sets whether to read or write the state.

“0”: Write (default)

“1”: Read

#### **b3.....SS: Scan Select**

This bit gives permission to read or write the internal data to the SCAN DATA register.

“0”: Normal operation (Do not allow read or write). (default)

“1”: Allow read and write.

#### **b7.....SBPDA: Sound Blaster Power Down Acknowledgement**

This bit indicates that the SB Block is ready to read or write to the internal state after setting SBPDR.

This bit is read only.

“0”: Read/Write not possible

“1”: Read/ Write possible

## **F1h: Scan In/ Out Data**

Read / Write

Default: 00h

| b7        | b6 | b5 | b4 | b3 | b2 | b1 | b0 |
|-----------|----|----|----|----|----|----|----|
| SCAN DATA |    |    |    |    |    |    |    |

**b[7:0] .....SCAN DATA**

This is the data port for reading and writing the internal state.

## **F8h: Interrupt Flag Register**

Read Only

Default: 00h

| b7 | b6 | b5 | b4 | b3 | b2 | b1 | b0  |
|----|----|----|----|----|----|----|-----|
| -  | -  | -  | -  | -  | -  | -  | SBI |

**b0 .....SBI: SB Interrupt Flag**

This bit indicates that the SB DSP occurs the interrupt. This bit is read only. Thus, read the SB DSP read port to clearing the interrupt and this bit. Then, the value of the read port is invalid.

## 2-3. MPU401

This block is for transmitting and receiving MIDI data. It is compatible with UART mode of “MPU401”. Full duplex operation is possible using the 16-byte FIFO for each direction, transmitting and receiving.

The following shows the MPUBase I/O map for MPU401.

|              |       |                       |
|--------------|-------|-----------------------|
| MPUBase      | (R/W) | MIDI Data port        |
| MPUBase + 1h | (R)   | Status Register port  |
| MPUBase + 1h | (W)   | Command Register port |

| port    | D7      | D6   | D5 | D4 | D3 | D2 | D1 | D0 |
|---------|---------|------|----|----|----|----|----|----|
| +0h     | Data    |      |    |    |    |    |    |    |
| +1h (W) | Command |      |    |    |    |    |    |    |
| +1h (R) | /DSR    | /DRR | -  | -  | -  | -  | -  | -  |

## 2-4. Joystick

JSBase (R/W)

| port | D7   | D6   | D5   | D4   | D3   | D2   | D1   | D0   |
|------|------|------|------|------|------|------|------|------|
| +0h  | JBB2 | JBB1 | JAB2 | JAB1 | JBCY | JBCX | JACY | JACX |

|         |                          |
|---------|--------------------------|
| JACX... | Joystick A, Coordinate X |
| JACY... | Joystick A, Coordinate Y |
| JBCX... | Joystick B, Coordinate X |
| JBCY... | Joystick B, Coordinate Y |
| JAB1... | Joystick A, Button 1     |
| JAB2... | Joystick A, Button 2     |
| JBB1... | Joystick B, Button 1     |
| JBB2... | Joystick B, Button 2     |

## 3. DMA Emulation Protocol

The former synthesizer LSI for the ISA bus such as the Sound Blaster used the DMA controller (8237: ISA DMAC) on the system to transfer the sound data from/to the host.

For DS-1, however, ISA DMAC must be used to transfer the sound data to the Sound Blaster Pro Block of the Legacy Audio Block.

Because signals to connect to the ISA DMAC are generally not available on the PCI bus, there are two ways proposed from the industry to emulate the ISA DMAC on the PCI bus. One is PC/PCI and the other is D-DMA.

DS-1 supports both protocols for transferring SB Pro sound data on the PCI bus.

### 3-1. PC/PCI

DS-1 provides two signals, PCREQ# and PCGNT# to realize the PC/PCI. The format of the signals is shown below. DS-1 asserts PCREQ# and sets PCREQ# to "HIGH" using the PCICLK corresponding to the DMA channel it is going to use.

In addition, DS-1 determines whether the next PCI I/O cycle is its own from the channel information that is encoded in PCGNT#.

PCGNT# is encoded as follows.

| GNT# Encoding |      |      |               |
|---------------|------|------|---------------|
| bit2          | bit1 | bit0 | GNT# Bits     |
| 0             | 0    | 0    | DMA Channel 0 |
| 0             | 0    | 1    | DMA Channel 1 |
| 0             | 1    | 0    | DMA Channel 2 |
| 0             | 1    | 1    | DMA Channel 3 |
| 1             | 0    | 0    | Reserved      |
| 1             | 0    | 1    | DMA Channel 5 |
| 1             | 1    | 0    | DMA Channel 6 |
| 1             | 1    | 1    | DMA Channel 7 |

DS-1 supports only 8-bit DMA channels (DMA Channel 0-3). It also only supports Single DMA transfer.

## 3-2. D-DMA

DS-1 provides the following registers to support D-DMA. D-DMA Slave Configuration Register (4C-4Dh) of the PCI Configuration register is used to set the Base address of the Slave Address.

| Slave Address | R/W | Register Name            |
|---------------|-----|--------------------------|
| Base + 0h     | W   | Base Address 0-7         |
| Base + 0h     | R   | Current Address 0-7      |
| Base + 1h     | W   | Base Address 8-15        |
| Base + 1h     | R   | Current Address 8-15     |
| Base + 2h     | W   | Base Address 16-23       |
| Base + 2h     | R   | Current Address 16-23    |
| Base + 3h     | W   | Base Address 24-31       |
| Base + 3h     | R   | Current Address 24-31    |
| Base + 4h     | W   | Base Word Count 0-7      |
| Base + 4h     | R   | Current Word Count 0-7   |
| Base + 5h     | W   | Base Word Count 8-15     |
| Base + 5h     | R   | Current Word Count 8-15  |
| Base + 6h     | W   | Base Word Count 16-23    |
| Base + 6h     | R   | Current Word Count 16-23 |
| Base + 7h     | N/A | Reserved                 |
| Base + 8h     | W   | Command                  |
| Base + 8h     | R   | Status                   |
| Base + 9h     | W   | Request                  |
| Base + Ah     | N/A | Reserved                 |
| Base + Bh     | W   | Mode                     |
| Base + Ch     | W   | Reserved                 |
| Base + Dh     | W   | Master Clear             |
| Base + Eh     | N/A | Reserved                 |
| Base + Fh     | R/W | Multi-Channel Mask       |

These registers can be accessed by 8-bit or 16-bit bus width.

DS-1 supports 8-bit DMA transfer only.

## 4. Interrupt Routing

DS-1 supports three types of interrupts, interrupt signal on the PCI bus (INTA#), interrupt signal on the ISA bus (IRQ[5,7,9,10,11]), and Serialized IRQ.

The IRQs on DS-1 are routed as shown below.

PCI Audio can only use INTA#, but the Sound Blaster Pro and MPU401 blocks of the Legacy Audio Block can use any of the three protocols.

The protocol can be switched using 40h-43h (Legacy Audio Control Register) of the PCI Configuration Register.

### 4-1. Serialized IRQ

Serialized IRQ is a method to encode IRQs of 15 channels into one signal.

DS-1 provides the SERIRQ# pin to support Serialized IRQ.

Only one channel out of the 5 channels, IRQ5, IRQ7, IRQ9, IRQ10, and IRQ11, can be encoded into the IRQ/Data frame of Serialized IRQ.

The IRQ channel is selected using 40h-43h (Legacy Audio Control Register) of the PCI Configuration Register.

## 5. Digital Audio Interface

DS-1 only supports SPDIF output conforming to IEC958. The only supported Fs is 48 kHz. It can be selectable from the Dolby Digital (AC-3) encoded data or the result of Digital Mixing.

## 6. Hardware Volume Control

The hardware volume control determines the AC'97 master volume without using any software control using the external circuit listed below.

Two pins, VOLUP# for increasing the volume and VOLDW# for decreasing the volume, are used.

DS-1 provides a shadow register for the AC'97 master volume. When the software accesses the AC'97 Master Volume, it is always reflected in the shadow register.

The value of the shadow register is incremented by 1.5dB on the rising edge of the signal input to the VOLUP# pin. If it is already set to the maximum value, it does not change. The value set in the shadow register automatically updates the AC'97 master volume register through the AC-Link.

The value of the shadow register is decremented by 1.5dB on the rising edge of the signal input to the VOLDW# pin. If it is already set to the minimum value, it does not change. The value set in the shadow register automatically updates the AC'97 master volume register through the AC-Link.

Also, when both VOLUP#, VOLDW# pins are at LOW level, the MUTE bit of the shadow address is enabled and the Master Volume Mute bit of the AC'97 register is automatically set through the AC-Link. When a rising edge is detected on either VOLUP# or VOLDW#, the MUTE bit is reset through the AC-Link. The Master Volume is set to the value before the Mute.

If the AC-Link is BUSY (when controlling the register from the AC'97 Control Register), the value in the shadow register is set to AC'97 on the next frame. The AC'97 Control Register is set to BUSY in this case.

When the master volume changes or is muted due to VOLUP#, VOLDW#, an interrupt is generated at the host.

The interrupt is used to notify the driver that the Master Volume has been changed from the outside.

## ■ ELECTRICAL CHARACTERISTICS

### 1. Absolute Maximum Ratings

| Item                                | Symbol    | Min. | Max.          | Unit |
|-------------------------------------|-----------|------|---------------|------|
| Power Supply Voltage 1 (PVDD, VDD5) | $V_{DD5}$ | -0.5 | 7.0           | V    |
| Power Supply Voltage 2 (VDD3, LVDD) | $V_{DD3}$ | -0.3 | 4.6           | V    |
| Input Voltage 1 (PVDD, VDD5)        | $V_{IN5}$ | -0.5 | $V_{DD5}+0.5$ | V    |
| Input Voltage 2 (VDD3, LVDD)        | $V_{IN3}$ | -0.3 | $V_{DD3}+0.3$ | V    |
| Operating Ambient Temperature       | $T_{OP}$  | 0    | 70            | °C   |

## 4-4. AC'97 / AC3F2 Master Clock (Fig.5)

| Item               | Symbol       | Min. | Typ.  | Max. | Unit |
|--------------------|--------------|------|-------|------|------|
| CMCLK Cycle Time   | $t_{CMCYC}$  | -    | 40.69 | -    | ns   |
| CMCLK High Time    | $t_{CMHIGH}$ | 8    | -     | -    | ns   |
| CMCLK Low Time     | $t_{CMLOW}$  | 8    | -     | -    | ns   |
| CMCLK Rising Time  | $t_{CMR}$    | -    | 4.6   | -    | ns   |
| CMCLK Falling Time | $t_{CMF}$    | -    | 2.1   | -    | ns   |

Note : Top = 0-70°C, PVDD=5.0±0.25 V, VDD5=5.0±0.25 V, VDD3=3.3±0.3 V, LVDD=3.3±0.3 V,  $C_L$ =50 pF

Fig.5: Master Clock timing for AC'97 and AC3F2

## 4-5. AC-link (Fig.6)

| Item                        | Symbol        | Condition | Min. | Typ. | Max. | Unit |
|-----------------------------|---------------|-----------|------|------|------|------|
| CBCLK Cycle Time            | $t_{CBICYC}$  |           | -    | 81.4 | -    | ns   |
| CBCLK High Time             | $t_{CBIHIGH}$ |           | 35   | 40.7 | 45   | ns   |
| CBCLK Low Time              | $t_{CBILOW}$  |           | 35   | 40.7 | 45   | ns   |
| CSYNC Cycle Time            | $t_{CSYCYC}$  |           | -    | 20.8 | -    | ns   |
| CSYNC High Time             | $t_{CSYHIGH}$ |           | -    | 1.3  | -    | ns   |
| CSYNC Low Time              | $t_{CSYLOW}$  |           | -    | 19.5 | -    | ns   |
| CBCLK to Signal Valid Delay | $t_{CVAL}$    | *12       | -    | -    | 20   | ns   |
| Output Hold Time for CBCLK  | $t_{COH}$     | *12       | 0    | -    | -    | ns   |
| Input Setup Time to CBCLK   | $t_{CISU}$    | *13       | 15   | -    | -    | ns   |
| Input Hold Time for CBCLK   | $t_{CIH}$     | *13       | 5    | -    | -    | ns   |
| Warm Reset Width            |               |           | -    | 1.3  | -    | μs   |

Note) Top = 0-70°C, PVDD=5.0±0.25 V, VDD5=5.0±0.25 V, VDD3=3.3±0.3 V, LVDD=3.3±0.3 V,  $C_L$ =50 pF

\*12: This characteristic is applicable to CSYNC and CSDO signal.

\*13: This characteristic is applicable to CSDI signal.

Fig.6: AC-link timing

## 4-6 AC3F2 Interface (Fig.7, 8)

| Item                        | Symbol        | Condition | Min. | Typ. | Max. | Unit |
|-----------------------------|---------------|-----------|------|------|------|------|
| ASCLK Cycle Time            | $t_{ASCCYC}$  |           | -    | 325  | -    | ns   |
| ASCLK High Time             | $t_{ASCHIGH}$ |           | 140  | -    | 180  | ns   |
| ASCLK Low Time              | $t_{ASCLOW}$  |           | 140  | -    | 180  | ns   |
| ASCLK to Signal Valid Delay | $t_{ACVAL}$   | *14       | -    | -    | 50   | ns   |
| Output Hold Time for ASCLK  | $t_{ACOH}$    | *14       | -10  | -    | -    | ns   |
| Input Setup Time to ASCLK   | $t_{ACISU}$   | *15       | 20   | -    | -    | ns   |
| Input Hold Time for ASCLK   | $t_{ACIH}$    | *15       | 10   | -    | -    | ns   |
| ABCLK Cycle Time            | $t_{ABICYC}$  |           | -    | 325  | -    | ns   |
| ABCLK High Time             | $t_{ABIHIGH}$ |           | 140  | -    | 180  | ns   |
| ABCLK Low Time              | $t_{ABILOW}$  |           | 140  | -    | 180  | ns   |
| ABCLK to Signal Valid Delay | $t_{ASVAL}$   | *16       | -    | -    | 50   | ns   |
| Output Hold Time for ABCLK  | $t_{ASOH}$    | *16       | -10  | -    | -    | ns   |
| Input Setup Time to ABCLK   | $t_{ASISU}$   | *17       | 20   | -    | -    | ns   |
| Input Hold Time for ABCLK   | $t_{ASIH}$    | *17       | 10   | -    | -    | ns   |

Note) Top = 0-70°C, PVDD=5.0±0.25 V, VDD5=5.0±0.25 V, VDD3=3.3±0.3 V, LVDD=3.3±0.3 V, C<sub>L</sub>=50 pF

\*14: This characteristic is applicable to ACS and ACDO signal.

\*15: This characteristic is applicable to ACDI signal.

\*16: This characteristic is applicable to ASDO and ALRCK signal.

\*17: This characteristic is applicable to ASDI signal.

## EXTERNAL DIMENSIONS

YMF724F-V

The shape of the molded corner may slightly different from the shape in this diagram.

The figure in the parenthesis ( ) should be used as a reference.

Plastic body dimensions do not include burr of resin.

UNIT : mm

Note : The LSIs for surface mount need especial consideration on storage and soldering conditions.

For detailed information, please contact your nearest agent of Yamaha.

## IMPORTANT NOTICE

1. Yamaha reserves the right to make changes to its Products and to this document without notice. The information contained in this document has been carefully checked and is believed to be reliable. However, Yamaha assumes no responsibilities for inaccuracies and makes no commitment to update or to keep current the information contained in this document.
2. These Yamaha Products are designed only for commercial and normal industrial applications, and are not suitable for other uses, such as medical life support equipment, nuclear facilities, critical care equipment or any other application the failure of which could lead to death, personal injury or environmental or property damage. Use of the Products in any such application is at the customer's sole risk and expense.
3. YAMAHA ASSUMES NO LIABILITY FOR INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES OR INJURY THAT MAY RESULT FROM MISAPPLICATION OR IMPROPER USE OR OPERATION OF THE PRODUCTS.
4. YAMAHA MAKES NO WARRANTY OR REPRESENTATION THAT THE PRODUCTS ARE SUBJECT TO INTELLECTUAL PROPERTY LICENSE FROM YAMAHA OR ANYTHIRD PARTY, AND YAMAHA MAKES NO WARRANTY OR REPRESENTATION OF NON-INFRINGEMENT WITH RESPECT TO THE PRODUCTS. YAMAHA SPECIFICALLY EXCLUDES ANY LIABILITY TO THE CUSTOMER OR ANY THIRD PARTY ARISING FROM OR RELATED TO THE PRODUCTS' INFRINGEMENT OF ANY THIRD PARTY'S INTELLECTUAL PROPERTY RIGHTS, INCLUDING THE PATENT, COPYRIGHT, TRADEMARK OR TRADE SECRET RIGHTS OF ANY THIRD PARTY.
5. EXAMPLES OF USE DESCRIBED HEREIN ARE MERELY TO INDICATE THE CHARACTERISTICS AND PERFORMANCE OF YAMAHA PRODUCTS. YAMAHA ASSUMES NO RESPONSIBILITY FOR ANY INTELLECTUAL PROPERTY CLAIMS OR OTHER PROBLEMS THAT MAY RESULT FROM APPLICATIONS BASED ON THE EXAMPLES DESCRIBED HEREIN. YAMAHA MAKES NO WARRANTY WITH RESPECT TO THE PRODUCTS, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR USE AND TITLE.

Note) The specifications of this product are subject to improvement change without prior notice.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
