### Functional Diagram

### General Description

The HMC966LP4E is a compact GaAs MMIC I/Q downconverter in a leadless RoHS compliant SMT package. This device provides a small signal conversion gain of 14 dB with a noise figure of 2.5 dB and 40 dBc of image rejection across the frequency band. The HMC966LP4E utilizes an LNA followed by an image reject mixer which is driven by an active x2 multiplier. The image reject mixer eliminates the need for a filter following the LNA, and removes thermal noise at the image frequency. I and Q mixer outputs are provided and an external 90° hybrid is needed to select the required sideband. The HMC966LP4E is a much smaller alternative to hybrid style image reject mixer downconverter assemblies, and is compatible with surface mount manufacturing techniques.

### Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1, 2, 6, 7, 10 - 12, 15, 18 - 22	N/C	The pins are not connected internally; however, all data shown herein was measured with these pins connected to RF/DC ground externally.	
3	VDRF	Power supply for RF LNA.	
4	VDLO2	Power supply for second stage of LO amplifier.	
5	VDLO1	Power supply for first stage of LO amplifier.	
8	LO	This pin is AC coupled and matched to 50 Ohms.	
9, 13, 17, 24	GND	These pins and the exposed ground paddle must be connected to RF/DC ground.	
16	IF2	This pin is DC coupled. For applications not requiring operation to DC this port should be DC blocked externally using a series capacitor whose value has been chosen to pass the necessary frequency range. For operation to DC, this pin must not sink / source more than 3 mA of current or part non-function and possible failure will result.	
14	IF1		
23	RF	This pin is AC coupled and matched to 50 Ohms

[2] Circuit Board Material: Rogers 4350

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
