Description

The Premium Evaluation Boards System supports the 32-bit SPC574Sx STMicroelectronics' automotive microcontrollers.

The complete system consists of an SPC58XXMB/SPC57XXMB motherboard and an SPC574SADPTx daughter card which plugs into the motherboard. Different daughter cards are available for evaluating the whole family of device in all supported packages. All daughter cards are similar in design and concept.

The evaluation system (motherboard and daughter card) allows full access to the CPU, all the CPU's I/O signals, and the motherboard peripherals (such as CAN, SCI, LIN and FlexRAY).

The daughter card itself can be used as a standalone unit when access to the I/O pins or peripherals is not needed.
