Notes:

1. The temperature of the component (ambient plus temperature rise) must be within the stated operating temperature range.
2. For flyback topology applications, it is necessary to ensure that the transformer will not saturate in the application. The peak flux density (Bpk) should remain below 2700Gauss. To calculate the peak flux density use the following formula:
   Bpk (Gauss) = K1_Factor * Ipk(A)
3. In high volt-µsec applications, it is important to calculate the core loss of the transformer. Approximate transformer core loss can be calculated as:
   CoreLoss (W) = 3.84E-14 * (Freq_kHz)$^{1.63}$ * (ΔB_Gauss)$^{2.63}$
   where ΔB can be calculated as:
   For Flyback Topology: ΔB = K1_Factor * ΔI(A)
   For Forward Topology: ΔB = K1_Factor * Volt-µsec
4. The standard pin-numbering for this package is indicated in the below mechanical drawing showing pin 1 on the lower right corner and the numbers proceeding clockwise to pin 10 on the upper right corner.
5. Optional Tape & Reel packaging can be ordered by adding a "T" suffix to the part number (i.e. (PA2160.001NL becomes PA2160.001NLT). Pulse complies with industry standard tape and reel specification EIA481.
