

HEX PRECISION LIMITER

- HIGH PERFORMANCE CLAMPING AT GROUND AND POSITIVE REFERENCE VOLTAGE
 - FAST ACTIVE CLAMPING
 - OPERATING RANGE 4.75 - 5.25 V
 - SINGLE VOLTAGE FOR SUPPLY AND POSITIVE REFERENCE
 - LOW QUIESCENT CURRENT
 - LOW INPUT LEAKAGE CURRENT

MINIDIP

S08

DESCRIPTION

The L9700 is a monolithic circuit which is suited for input protection and voltage clamping purpose.

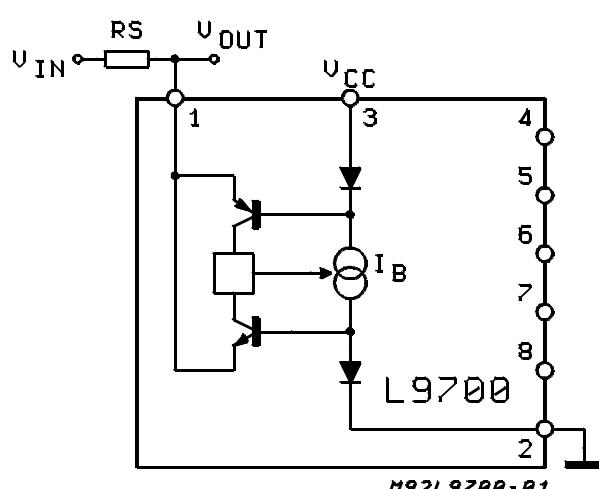

The limiting function is referred to ground and the positive supply voltage.

One single element contains six independent channels

Very fast speed is achieved by internal feedback and the application of a new vertical PNP-transistor with isolated collector.

ORDERING NUMBERS: L9700 (DIP)
L9700D (SO8)

BLOCK DIAGRAM

L9700

ABSOLUTE MAXIMUM RATINGS

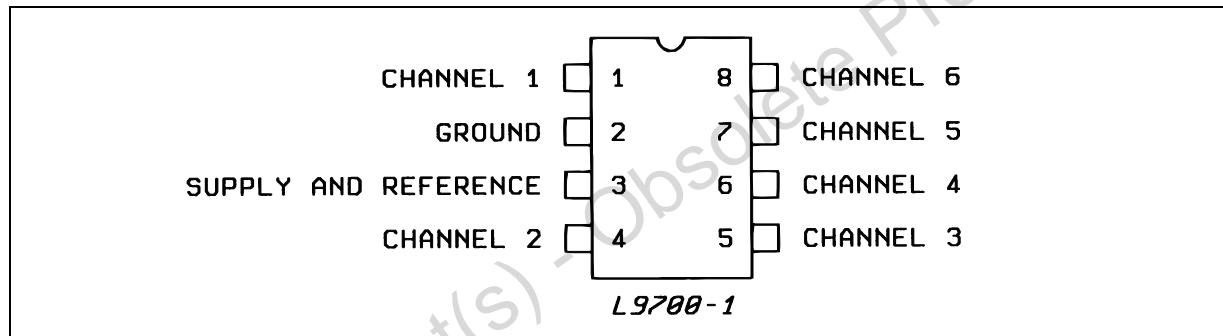

Symbol	Parameter	Value	Unit
V _{CC}	Supply Voltage	20	V
I _{IN}	Input Current per Channel	30	mA
T _j , T _{stg}	Junction and Storage Temperature	-55 to 150	°C
P _{tot}	Total Power Dissipation (T _{amb} = 85°C)	650	mW

Note: The circuit is ESD protected according to MIL-STD-883C

THERMAL DATA

Symbol	Parameter	MINIDIP	SO8	Unit
R _{th,j-amb}	Thermal Resistance Junction to Ambient	Max.	100	200 °C/W

PIN CONNECTION

ELECTRICAL CHARACTERISTICS (V_{CC} = 5V, T_J = -40 to 125°C unless otherwise specified)

Symbol	Parameter	Test condition	Min.	Typ.	Max.	Unit

APPLICATION INFORMATION

Most integrated circuits, both HNMOS and bipolar, are very sensitive to positive and negative overvoltages on the supply and at the inputs.

These transients occur in large numbers and with different magnitudes in the automotive environment, making adequate protection for devices aimed at it indispensable.

Overvoltages on the supply line are faced through high voltage integration technologies or through external protection (transil, varistor).

Signal inputs are generally protected using clamp diodes to the supply and ground, and a current limiter resistor. However, such solutions do not always completely satisfy the protection specifications in terms of intervention speed, negative clamping and current leakage high enough to change analog signals.

The L9700 device combines a high intervention speed with a high precision positive and negative

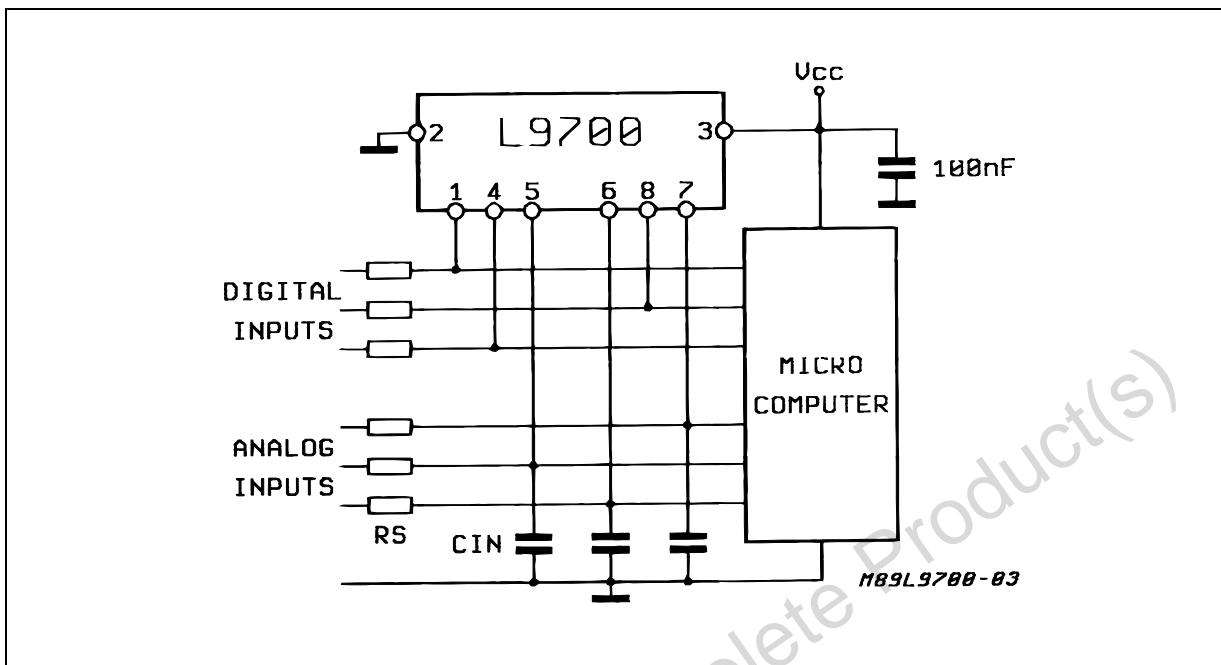

clamp and a low current leakage providing the optimal solution to the problems of the automotive environment.

The high intervention speed, due to the pre-bias of the limiter stage and internal feedback, limits the voltage overshoot and avoid the use of external capacitors for the limitation of the transient rise times.

Figure 3 illustrates a typical automotive application scheme. The resistor R_S limits the input current of the device and is therefore dimensioned considering the characteristics of the transients to be eliminated. Consequently :

$$R_S = \frac{V_{\text{transient Peak}}}{I_{\text{IN MAX}}}$$

The C_{IN} capacitors must be used only on analog inputs because they present a low impedance during the sampling period.

Figure 3 : Typical Application.

The minimum value for C_{IN} is determined by the accuracy required, the time taken to sample the input and the input impedance during that time, while the maximum value is determined by the required frequency response and the value of R_S .

Thus for a resistive input A/D connector where :

T_s = Sample time (Seconds)

R_D = Device input resistance (Ohms)

V_{IN} = Input voltage (Volts)

k = Required accuracy (%)

Q_1 = Charge on capacitor before sampling

Q_2 = Charge on capacitor after sampling

I_D = Device input current (Amps)

Thus :

$$Q_1 - Q_2 = \frac{k \cdot Q_1}{100}$$

$$\text{but } Q_1 = C_{IN} V_{IN}$$

$$\text{and } Q_1 - Q_2 = I_D \cdot T_s$$

$$\text{so that } I_D \cdot T_s = \frac{k \cdot C_{IN} - V_{IN}}{100}$$

$$\text{and } C_{IN} (\min) = \frac{I_D \cdot T_s}{V_{IN} \cdot k} \text{ Farad}$$

$$\text{so } C_{IN} (\min) = \frac{100 \cdot T_s}{k \cdot R_D} \text{ Farad}$$

The calculation for a sample and hold type convertor is even simpler :

k = Required accuracy (%)

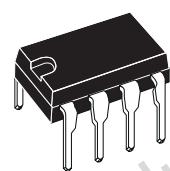

C_H = Hold capacitor (Farad)

$$C_{IN} (\min) = \frac{100 \cdot C_H}{k} \text{ Farad}$$

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помошь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помошь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
