1/ Signals on S, D or IN exceeding V⁺ or V⁻ are clamped by internal diodes. Limit forward current to maximum current ratings.

Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

NOTE 2: This data sheet uses the algebraic convention, where the most negative value is a minimum and the most positive value is a maximum.

NOTE 3: Guaranteed by design.

NOTE 4: Δr_{ON}=Δr_{ON(max)}-Δr_{ON(min)}. On-resistance match between channels and flatness are guarantee only with specified voltages. Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured at the extremes of the specified analog signal range.
