

## 20 W bridge/stereo amplifier for car radio

Datasheet – production data

### Features

- High output power:
  - $P_o = 10 + 10 \text{ W}$  @  $R_L = 2 \Omega$ , THD = 10 %
  - $P_o = 20 \text{ W}$  @  $R_L = 4 \Omega$ , THD = 10 %.
- Protection against:
  - Output DC and AC short circuit to ground
  - Overrating chip temperature
  - Load dump voltage surge
  - Fortuitous open ground
  - Very inductive loads
- Loudspeaker protection during short circuit for one wire to ground

### Description

The TDA2005 is a class B dual audio power amplifier in Multiwatt11 package specifically designed for car radio applications.

Power booster amplifiers can be easily designed using this device that provides a high current capability (up to 3.5 A) and can drive very low impedance loads (down to 1.6  $\Omega$  in stereo applications) obtaining an output power of more than 20 W (bridge configuration).

### 2.3.2 Bridge amplifier design

The following considerations can be useful when designing a bridge amplifier.

**Table 5. Bridge amplifier design**

Parameter		Single ended	Bridge
$V_{o\ max}$	Peak output voltage (before clipping)	$\frac{1}{2}(V_s - 2V_{CEsat})$	$V_s - 2V_{CEsat}$
$I_{o\ max}$	Peak Output current (before clipping)	$\frac{1}{2} \frac{V_s - 2V_{CEsat}}{R_L}$	$\frac{V_s - 2V_{CEsat}}{R_L}$
$P_{o\ max}$	RMS output power (before clipping)	$\frac{1}{4} \frac{(V_s - 2V_{CEsat})^2}{2R_L}$	$\frac{(V_s - 2V_{CEsat})^2}{2R_L}$

Where:

$V_{CE\ sat}$  = output transistors saturation voltage

$V_s$  = allowable supply voltage

$R_L$  = load impedance

Voltage and current swings are twice for a bridge amplifier in comparison with single ended amplifier.

In other words, with the same  $R_L$  the bridge configuration can deliver an output power that is four times the output power of a single ended amplifier, while, with the same max output current the bridge configuration can deliver an output power that is four times the output power of a single ended amplifier, while, with the same max output current the bridge configuration can deliver an output power that is twice the output power of a single ended amplifier.

Core must be taken when selecting  $V_s$  and  $R_L$  in order to avoid an output peak current above the absolute maximum rating.

From the expression for  $I_{Omax}$ , assuming  $V_s = 14.4\ V$  and  $V_{CE\ sat} = 2\ V$ , the minimum load that can be driven by TDA2005 in bridge configuration is:

$$R_{Lmin} = \frac{V_s - 2V_{CEsat}}{I_{Omax}} = \frac{14.4 - 4}{3.5} = 2.97\ \Omega$$

The voltage gain of the bridge configuration is given by (see [Figure 36](#)):

$$G_v = \frac{V_0}{V_1} = 1 + \frac{R_1}{\left(\frac{R_2 \cdot R_4}{R_2 + R_4}\right)} + \frac{R_3}{R_4}$$

For sufficiently high gains (40 to 50 dB) it is possible to put  $R_2 = R_4$  and  $R_3 = 2R_1$ , simplifying the formula in:

$$G_v = 4 \frac{R_1}{R_2}$$

Table 6. High gain vs. Rx

$G_v$ (dB)	$R_1$ ( $\Omega$ )	$R_2 = R_4$ ( $\Omega$ )	$R_3$ ( $\Omega$ )
40	1000	39	2000
50	1000	12	2000

### 3 Application suggestion

The recommended values of the components are those shown on bridge application circuit of [Figure 3](#). Different values can be used; the following table can help the designer.

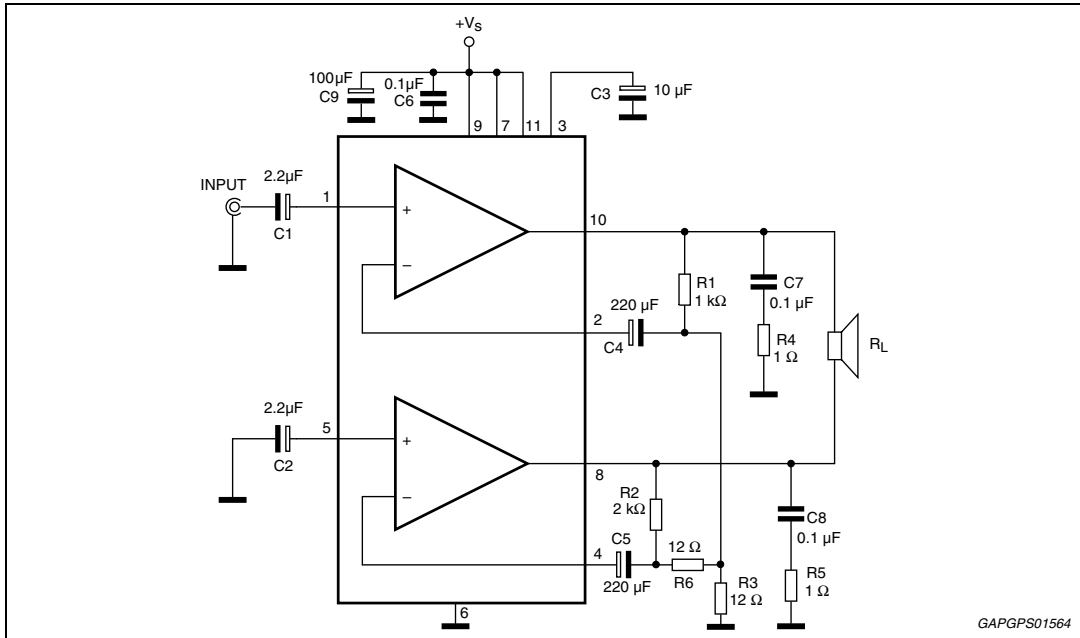

**Table 8. Recommended values of the component of the bridge application circuit**

Component	Recommended value	Purpose	Larger than	Smaller than r
C1	2.2 $\mu$ F	Input DC decoupling	-	-
C2	2.2 $\mu$ F	Optimization of turn on Pop and turn on Delay	High turn on delay	High Turn on Pop, Higher low frequency cutoff Increase of Noise
C3	0.1 $\mu$ F	Supply bypass	-	Danger of oscillation
C4	10 $\mu$ F	Ripple rejection	Increase of SVR, Increase of the Switch-on Time	Degradation of SVR
C5, C7	100 $\mu$ F	Bootstrapping	-	Increase of distortion at low frequency
C6, C8	220 $\mu$ F	Feedback input DC decoupling, low frequency cut-off	-	Danger of oscillation at high frequencies with inductive loads
C9, C10	0.1 $\mu$ F	Frequency stability	-	Danger of oscillation
R1	120 k $\Omega$	Optimization of the output symmetry	Smaller P <sub>omax</sub>	Smaller P <sub>omax</sub>
R2	1 k $\Omega$	-	-	-
R3	2 k $\Omega$	-	-	-
R4, R5	12 $\Omega$	Closed loop gain setting (see Bridge Amplifier Design <sup>(1)</sup> )	-	-
R6, R7	1 $\Omega$	Frequency stability	Danger of oscillation at high frequencies with inductive loads	-

1. The closed loop gain must be higher than 32 dB.

## 4.1 Built-in protection systems

### 4.1.1 Load dump voltage surge

The TDA2005 has a circuit which enables it to withstand voltage pulse train, on Pin 9, of the type shown in [Figure 36](#). If the supply voltage peaks to more than 40 V, then an LC filter must be inserted between the supply and pin 9, in order to assure that the pulses at pin 9 will be held within the limits shown.

A suggested LC network is shown in [Figure 35](#). With this network, a train of pulses with amplitude up to 120 V and width of 2 ms can be applied at point A. This type of protection is ON when the supply voltage (pulse or DC) exceeds 18 V. For this reason the maximum operating supply voltage is 18 V.

**Figure 35. Suggested LC network circuit****Figure 36. Voltage gain bridge configuration**

#### 4.1.2 Short circuit (AC and DC conditions)

The TDA2005 can withstand a permanent short-circuit on the output for a supply voltage up to 16 V.

#### 4.1.3 Polarity inversion

High current (up to 10 A) can be handled by the device with no damage for a longer period than the blow-out time of a quick 2 A fuse (normally connected in series with the supply). This feature is added to avoid destruction, if during fitting to the car, a mistake on the connection of the supply is made.

#### 4.1.4 Open ground

When the ratio is in the ON condition and the ground is accidentally opened, a standard audio amplifier will be damaged. On the TDA2005 protection diodes are included to avoid any damage.

#### 4.1.5 Inductive load

A protection diode is provided to allow use of the TDA2005 with inductive loads.

#### 4.1.6 DC voltage

The maximum operating DC voltage for the TDA2005 is 18 V. However the device can withstand a DC voltage up to 28 V with no damage. This could occur during winter if two batteries are series connected to crank the engine.

### 4.1.7 Thermal shut-down

The presence of a thermal limiting circuit offers the following advantages:

1. an overload on the output (even if it is permanent), or an excessive ambient temperature can be easily withstood.
2. the heatsink can have a smaller factor of safety compared with that of a conventional circuit. There is no device damage in the case of excessive junction temperature : all that happens is that  $P_o$  (and therefore  $P_{tot}$ ) and  $I_d$  are reduced.

The maximum allowable power dissipation depends upon the size of the external heatsink (i.e. its thermal resistance); *Figure 37* shows the power dissipation as a function of ambient temperature for different thermal resistance.

### 4.1.8 Loudspeaker protection

The circuit offers loudspeaker protection during short circuit for one wire to ground.

**Figure 37. Maximum allowable power dissipation vs. ambient temperature**

## 6 Revision history

**Table 9. Document revision history**

Date	Revision	Changes
09-Jun-1998	1	Initial release.
20-May-2000	2	Update logo.
10-Sep-2003	3	Update package drawing.
28-Jan-2010	4	Document reformatted. Updated <i>Features</i> , <i>Description</i> and <i>Table 1: Device summary</i> in cover page.
02-May-2012	5	Updated <i>Table 1: Device summary on page 1</i> .
17-Sep-2013	6	Updated Disclaimer.

**Please Read Carefully:**

Information in this document is provided solely in connection with ST products. STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, modifications or improvements, to this document, and the products and services described herein at any time, without notice.

All ST products are sold pursuant to ST's terms and conditions of sale.

Purchasers are solely responsible for the choice, selection and use of the ST products and services described herein, and ST assumes no liability whatsoever relating to the choice, selection or use of the ST products and services described herein.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted under this document. If any part of this document refers to any third party products or services it shall not be deemed a license grant by ST for the use of such third party products or services, or any intellectual property contained therein or considered as a warranty covering the use in any manner whatsoever of such third party products or services or any intellectual property contained therein.

**UNLESS OTHERWISE SET FORTH IN ST'S TERMS AND CONDITIONS OF SALE ST DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY WITH RESPECT TO THE USE AND/OR SALE OF ST PRODUCTS INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE (AND THEIR EQUIVALENTS UNDER THE LAWS OF ANY JURISDICTION), OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.**

**ST PRODUCTS ARE NOT DESIGNED OR AUTHORIZED FOR USE IN: (A) SAFETY CRITICAL APPLICATIONS SUCH AS LIFE SUPPORTING, ACTIVE IMPLANTED DEVICES OR SYSTEMS WITH PRODUCT FUNCTIONAL SAFETY REQUIREMENTS; (B) AERONAUTIC APPLICATIONS; (C) AUTOMOTIVE APPLICATIONS OR ENVIRONMENTS, AND/OR (D) AEROSPACE APPLICATIONS OR ENVIRONMENTS. WHERE ST PRODUCTS ARE NOT DESIGNED FOR SUCH USE, THE PURCHASER SHALL USE PRODUCTS AT PURCHASER'S SOLE RISK, EVEN IF ST HAS BEEN INFORMED IN WRITING OF SUCH USAGE, UNLESS A PRODUCT IS EXPRESSLY DESIGNATED BY ST AS BEING INTENDED FOR "AUTOMOTIVE, AUTOMOTIVE SAFETY OR MEDICAL" INDUSTRY DOMAINS ACCORDING TO ST PRODUCT DESIGN SPECIFICATIONS. PRODUCTS FORMALLY ESCC, QML OR JAN QUALIFIED ARE DEEMED SUITABLE FOR USE IN AEROSPACE BY THE CORRESPONDING GOVERNMENTAL AGENCY.**

Resale of ST products with provisions different from the statements and/or technical features set forth in this document shall immediately void any warranty granted by ST for the ST product or service described herein and shall not create or extend in any manner whatsoever, any liability of ST.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
