FAIRCHILD™

Is Now Part of

ON Semiconductor®

To learn more about ON Semiconductor, please visit our website at
www.onsemi.com

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild_questions@onsemi.com.

FXLA104
Low-Voltage Dual-Supply 4-Bit Voltage Translator with Configurable Voltage Supplies and Signal Levels, 3-State Outputs, and Auto Direction Sensing

Features

- Bi-Directional Interface between Two Levels: from 1.1V to 3.6V

- Fully Configurable: Inputs and Outputs Track V_{CC}

- Non-Preferential Power-Up; Either V_{CC} May Be Powered Up First

- Outputs Switch to 3-State if Either V_{CC} is at GND

- Power-Off Protection

- Bus-Hold on Data Inputs Eliminates the Need for Pull-Up Resistors; Do Not Use Pull-Up Resistors on A or B Ports

- Control Input (/OE) Referenced to V_{CCA} Voltage

- Available in 16-Terminal UMLP (1.8mm x 2.6mm) and 12-Terminal, Quad UMLP, 1.8 x 1.8mm Packages

- Direction Control Not Necessary

- 100Mbps Throughput when Translating Between 1.8V and 2.5V

- ESD Protection Exceeds:
  - 8kV HBM (per JESD22-A114 & Mil Std 883e 3015.7)
  - 2kV CDM (per ESD STM 5.3)

Applications

- Cell Phone, PDA, Digital Camera, Portable GPS

Description

The FXLA104 is a configurable dual-voltage supply translator for both uni-directional and bi-directional voltage translation between two logic levels. The device allows translation between voltages as high as 3.6V to as low as 1.1V. The A port tracks the V_{CCA} level and the B port tracks the V_{CCB} level. This allows for bi-directional voltage translation over a variety of voltage levels: 1.2V, 1.5V, 1.8V, 2.5V, and 3.3V.

The device remains in three-state as long as either V_{CC}=0V, allowing either V_{CC} to be powered up first. Internal power-down control circuits place the device in 3-state if either V_{CC} is removed.

The /OE input, when HIGH, disables both the A and B ports by placing them in a 3-state condition. The /OE input is supplied by V_{CCA}.

The FXLA104 supports bi-directional translation without the need for a direction control pin. The two ports of the device have auto-direction sense capability. Either port may sense an input signal and transfer it as an output signal to the other port.

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter	Conditions	Min.	Max.	Unit
V_{CC}	Supply Voltage	V_{CCA}	-0.5	4.6	V
		V_{CCB}	-0.5	4.6	
V_I	DC Input Voltage	I/O Ports A and B	-0.5	4.6	V
		Control Input (/OE)	-0.5	4.6	
V_O	Output Voltage[2]	Output 3-State	-0.5	4.6	V
		Output Active (A_n)	-0.5	V_{CCA} +0.5	
		Output Active (B_n)	-0.5	V_{CCB} +0.5	
I_{IK}	DC Input Diode Current	$V_{IN}<0V$		-50	mA
I_{OK}	DC Output Diode Current	$V_O<0V$		-50	mA
		$V_O>V_{CC}$		+50	
I_{OH}/I_{OL}	DC Output Source/Sink Current		-50	+50	mA
I_{CC}	DC V_{CC} or Ground Current (per Supply Pin)			±100	mA
T_{STG}	Storage Temperature Range		-65	+150	°C
P_D	Power Dissipation			17	mW
ESD	Electrostatic Discharge Capability	Human Body Model (per JESD22-A114 & Mil Std 883e 3015.7)		8	kV
		Charged Device Model (per ESD STM 5.3)		2	

Notes:
1. I_O absolute maximum ratings must be observed.
2. All unused inputs and input/outputs must be held at V_{CCi} or GND.

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

Symbol	Parameter	Conditions	Min.	Max.	Unit
V_{CC}	Power Supply	Operating V_{CCA} or V_{CCB}	1.1	3.6	V
V_{IN}	Input Voltage	Ports A and B	0	3.6	V
		Control Input (/OE)	0	V_{CCA}	V
T_A	Operating Temperature, Free Air		-40	+85	°C
dt/dV	Minimum Input Edge Rate	$V_{CCA/B}$ = 1.1 to 3.6V		10	ns/V
Θ_{JA}	Thermal Resistance: Junction-to-Ambient	UMLP-16		315	°C/W
		UMLP-12		300	
Θ_{JC}	Thermal Resistance: Junction-to-Case	UMLP-16		155	°C/W
		UMLP-12		165	

Power-Up/Power-Down Sequence

FXL translators offer an advantage in that either V_{CC} may be powered up first. This benefit derives from the chip design. When either V_{CC} is at 0V, outputs are in a high-impedance state. The control input (/OE) is designed to track the V_{CCA} supply. A pull-up resistor tying /OE to V_{CCA} should be used to ensure that bus contention, excessive currents, or oscillations do not occur during power-up or power-down. The size of the pull-up resistor is based upon the current-sinking capability of the device driving the /OE pin.

The recommended power-up sequence is:

1. Apply power to the first V_{CC}.
2. Apply power to the second V_{CC}.
3. Drive the /OE input LOW to enable the device.

The recommended power-down sequence is:

1. Drive /OE input HIGH to disable the device.
2. Remove power from either V_{CC}.
3. Remove power from other $V_{CC.}$

Pull-Up/Pull-Down Resistors

Do not use pull-up or pull-down resistors. This device has bus-hold circuits: pull-up or pull-down resistors are not recommended because they interfere with the output state. The current through these resistors may exceed the hold drive, $I_{I(HOLD)}$ and/or $I_{I(OD)}$ bus-hold currents, resulting in data transition and/or auto-direction sensing failures. The bus-hold feature eliminates the need for extra resistors.

Note:
12. Skew is the variation of propagation delay between output signals and applies only to output signals on the same port (A$_n$ or B$_n$) and switching with the same polarity (LOW-to-HIGH or HIGH-to-LOW) *(see Figure 11)*. Skew is guaranteed, but not tested.

Maximum Data Rate[13, 14]

T_A=-40 to 85°C

V_{CCA}	V_{CCB}=3.0V to 3.6V	V_{CCB}=2.3V to 2.7V	V_{CCB}=1.65V to 1.95V	V_{CCB}=1.4V to 1.6V	V_{CCB}=1.1V to 1.3V	Units
	Min.	Min.	Min.	Min.	Typ.	
V_{CCA}=3.00V to 3.60V	140	120	100	80	40	Mbps
V_{CCA}=2.30V to 2.70V	120	120	100	80	40	Mbps
V_{CCA}=1.65V to 1.95V	100	100	80	60	40	Mbps
V_{CCA}=1.40V to 1.60V	80	80	60	60	40	Mbps
V_{CCA}=1.10V to 1.30V	Typ.	Typ.	Typ.	Typ.	Typ.	
	40	40	40	40	40	Mbps

Notes:

13. Maximum data rate is guaranteed, but not tested.
14. Maximum data rate is specified in megabits per second *(see Figure 10)*. It is equivalent to two times the F-toggle frequency, specified in megahertz. For example, 100Mbps is equivalent to 50MHz.

Capacitance

Symbol	Parameter		Conditions	T_A=+25°C Typical	Units
C_{IN}	Input Capacitance Control Pin (/OE)		V_{CCA}=V_{CCB}=GND	3	pF
$C_{I/O}$	Input/Output Capacitance	A_n	V_{CCA}=V_{CCB}=3.3V, /OE=V_{CCA}	4	pF
		B_n		5	
C_{pd}	Power Dissipation Capacitance		V_{CCA}=V_{CCB}=3.3V, V_I=0V or V_{CC}, f=10MHz	25	pF

I/O Architecture Benefit

The FXLA104 I/O architecture benefits the end user, beyond level translation, in the following three ways:

Auto Direction without an external direction pin.

Drive Capacitive Loads. Automatically shifts to a higher current drive mode only during "Dynamic Mode" or HL / LH transitions.

Lower Power Consumption. Automatically shifts to low-power mode during "Static Mode" (no transitions), lowering power consumption.

The FXLA104 does not require a direction pin. Instead, the I/O architecture detects input transitions on both side and automatically transfers the data to the corresponding output. For example, for a given channel, if both A and B side are at a static LOW, the direction has been established as A → B, and a LH transition occurs on the B port; the FXLA104 internal I/O architecture automatically changes direction from A → B to B → A.

During HL / LH transitions, or "Dynamic Mode," a strong output driver drives the output channel in parallel with a weak output driver. After a typical delay of approximately 10ns – 50ns, the strong driver is turned off, leaving the weak driver enabled for holding the logic state of the channel. This weak driver is called the "bus hold." "Static Mode" is when only the bus hold drives the channel. The bus hold can be over ridden in the event of a direction change. The strong driver allows the FXLA104 to quickly charge and discharge capacitive transmission lines during dynamic mode. Static mode conserves power, where I_{CC} is typically < 5µA.

Bus Hold Minimum Drive Current

Specifies the minimum amount of current the bus hold driver can source/sink. The bus hold minimum drive current (II_{HOLD}) is V_{CC} dependent and guaranteed in the DC Electrical tables. The intent is to maintain a valid output state in a static mode, but that can be overridden when an input data transition occurs.

Bus Hold Input Overdrive Drive Current

Specifies the minimum amount of current required (by an external device) to overdrive the bus hold in the event of a direction change. The bus hold overdrive (II_{ODH}, II_{ODL}) is V_{CC} dependent and guaranteed in the DC Electrical tables.

Dynamic Output Current

The strength of the output driver during LH / HL transitions is *referenced on page 8, Dynamic Output Electrical Characteristics, I_{OHD}, and I_{OLD}.*
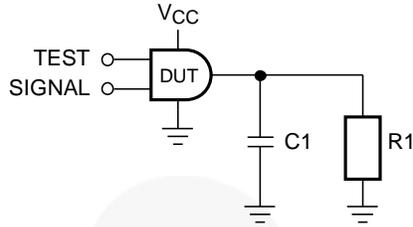

Test Diagrams

Figure 4. Test Circuit

Table 1.   AC Test Conditions

Test	Input Signal	Output Enable Control
t_{PLH}, t_{PHL}	Data Pulses	0V
t_{PZL}	0V	HIGH to LOW Switch
t_{PZH}	V_{CCI}	HIGH to LOW Switch

Table 2.   AC Load

V_{CCo}	C1	R1
1.2V ± 0.1V	15pF	1MΩ
1.5V ± 0.1V	15pF	1MΩ
1.8V ± 0.15V	15pF	1MΩ
2.5V ± 0.2V	15pF	1MΩ
3.3V ± 0.3V	15pF	1MΩ
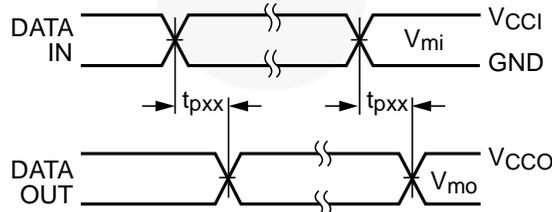

Figure 5. Waveform for Inverting and Non-Inverting Functions

Notes:
15. Input $t_R = t_F = 2.0$ns, 10% to 90%.
16. Input $t_R = t_F = 2.5$ns, 10% to 90%, at $V_I = 3.0$V to 3.6V only.
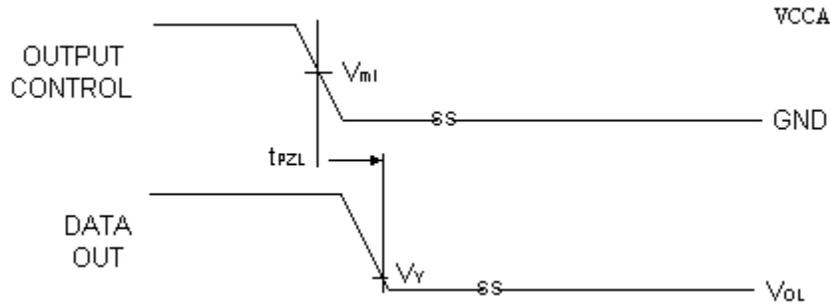

Figure 6. 3-State Output Low Enable Time for Low Voltage Logic

Notes:
17. Input $t_R = t_F = 2.0$ns, 10% to 90%.
18. Input $t_R = t_F = 2.5$ns, 10% to 90%, at $V_I = 3.0$V to 3.6V only.
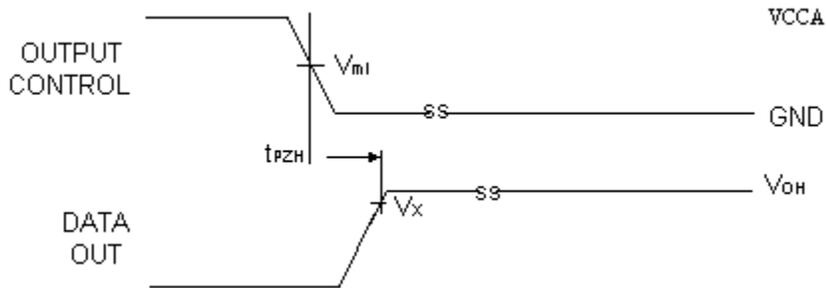

Figure 7. 3-State Output High Enable Time for Low Voltage Logic

Notes:
19. Input $t_R = t_F = 2.0$ns, 10% to 90%.
20. Input $t_R = t_F = 2.5$ns, 10% to 90%, at $V_I = 3.0$V to 3.6V only.

Table 3. Test Measure Points

Symbol	V_{DD}
V_{MI} [21]	$V_{CCI}/2$
V_{MO}	$V_{CCo}/2$
V_X	$0.9 \times V_{CCo}$
V_Y	$0.1 \times V_{CCo}$

Note:
21. $V_{CCI}=V_{CCA}$ for control pin /OE or $V_{MI}(V_{CCA}/2)$.
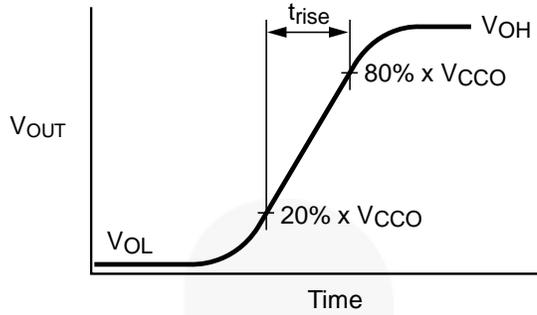

$$I_{OHD} \approx (C_L + C_{I/O}) \times \frac{\Delta V_{OUT}}{\Delta t} = (C_L + C_{I/O}) \times \frac{(20\% - 80\%) \bullet V_{CCO}}{t_{RISE}}$$

Figure 8. Active Output Rise Time and Dynamic Output Current High
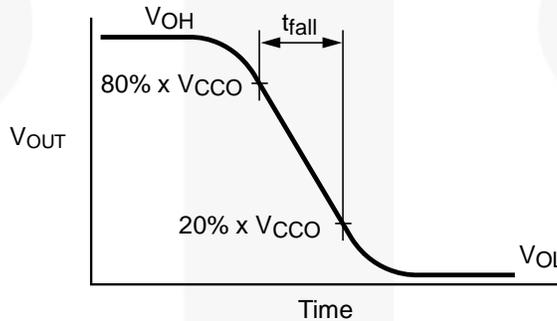

$$I_{OLD} \approx (C_L + C_{I/O}) \times \frac{\Delta V_{OUT}}{\Delta t} = (C_L + C_{I/O}) \times \frac{(80\% - 20\%) \bullet V_{CCO}}{t_{FALL}}$$

Package drawings are provided as a service to customers considering Fairchild components. Drawings may change in any manner without notice. Please note the revision and/or date on the drawing and contact a Fairchild Semiconductor representative to verify or obtain the most recent revision. Package specifications do not expand the terms of Fairchild's worldwide terms and conditions, specifically the warranty therein, which covers Fairchild products.

Always visit Fairchild Semiconductor's online packaging area for the most recent package drawings:
http://www.fairchildsemi.com/packaging/.

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.

2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

PRODUCT STATUS DEFINITIONS

Definition of Terms

Datasheet Identification	Product Status	Definition
Advance Information	Formative / In Design	Datasheet contains the design specifications for product development. Specifications may change in any manner without notice.
Preliminary	First Production	Datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.
No Identification Needed	Full Production	Datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve the design.
Obsolete	Not In Production	Datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. The datasheet is for reference information only.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits,General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
