

## GENERAL DESCRIPTION

The XRP29300/01/02 are 3A, highly accurate voltage regulators with a low dropout voltage of 600mV (typical) at 3A.

These regulators are specifically designed for low voltage applications that require a low dropout voltage and a fast transient response. They are fully fault protected against over-current, reverse battery, and positive and negative voltage transients. On-Chip trimming adjusts the reference voltage to 1% initial accuracy.

The XRP29300 is offered in a 3-pin TO-263 package, the XRP29301 is offered in a 5-pin TO-263 while XRP29302 is offered in a 5-pin TO-263 and 5-pin TO-220 packages.

## APPLICATIONS

- **Adjustable Power Supplies**
- **Constant Current Regulators**
- **Audio and Video/Graphic Cards**
- **Battery Chargers**

## FEATURES

- **3A Guaranteed Output Current**
- **Low Dropout Voltage of 600mV @ 3A**
- **Adjustable Output down to 1.25V**
- **1% Output Accuracy**
- **Tight Load and Line Regulation**
- **Fast Transient Response**
- **Reverse Battery Protection**
- **Zero Current Shutdown (XRP29301/02)**
- **Power Good Flag (XRP29301)**
- **Lead Free 3-Pin TO-263, 5-pin TO-220 and TO-263 Packages**

## TYPICAL APPLICATION DIAGRAM

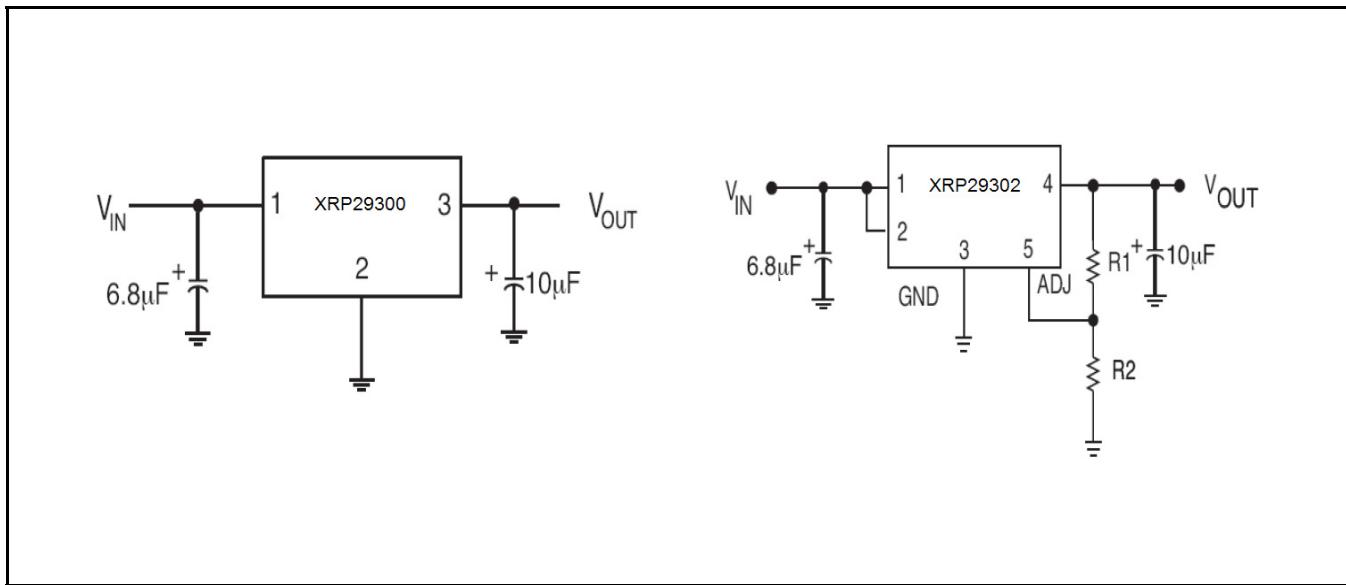

Fig. 1: XRP29300 and XRP29302 Application Diagrams

## ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

Input Voltage $V_{IN}^1$ .....	20V
Storage Temperature .....	-65°C to 150°C
Lead Temperature (Soldering, 5 sec) .....	260°C
ESD Rating (HBM - Human Body Model) .....	
All pins except EN.....	2kV
En pin .....	1kV

## ELECTRICAL SPECIFICATIONS

Specifications with standard type are for an Operating Junction Temperature of  $T_J = T_A = 25^\circ\text{C}$  only; limits applying over the full Operating Junction Temperature range are denoted by a “•”. Minimum and Maximum limits are guaranteed through test, design, or statistical correlation. Typical values represent the most likely parametric norm at  $T_J = 25^\circ\text{C}$ , and are provided for reference purposes only. Unless otherwise indicated,  $V_{IN} = V_{OUT} + 1\text{V}$  and  $I_{OUT}=10\text{mA}$ ,  $C_{IN} = 6.8\mu\text{F}$ ,  $C_{OUT} = 10\mu\text{F}$ ,  $T_A = 25^\circ\text{C}$ .

Parameter	Min.	Typ.	Max.	Units	Conditions
<b>Fixed Voltage Versions</b>					
Output Voltage, 1.8V Version	1.782	1.800	1.818	V	$I_{OUT}=10\text{mA}$
	1.764	1.800	1.836		• $10\text{mA} \leq I_{OUT} \leq 3\text{A}$ , $2.8\text{V} \leq V_{IN} \leq 16\text{V}$
Output Voltage, 2.5V Version	2.475	2.500	2.525	V	$I_{OUT}=10\text{mA}$
	2.450	2.500	2.550		• $10\text{mA} \leq I_{OUT} \leq 3\text{A}$ , $3.5\text{V} \leq V_{IN} \leq 16\text{V}$
Output Voltage, 3.3V Version	3.267	3.300	3.333	V	$I_{OUT}=10\text{mA}$
	3.234	3.300	3.366		• $10\text{mA} \leq I_{OUT} \leq 3\text{A}$ , $4.3\text{V} \leq V_{IN} \leq 16\text{V}$
Output Voltage, 5.0V Version	4.950	5.000	5.050	V	$I_{OUT}=10\text{mA}$
	4.900	5.000	5.100		• $10\text{mA} \leq I_{OUT} \leq 3\text{A}$ , $6.0\text{V} \leq V_{IN} \leq 16\text{V}$
<b>All Voltage Versions</b>					
Line Regulation		0.06	0.5	%	$I_{OUT}=10\text{mA}$ , $(V_{OUT}+1\text{V}) \leq V_{IN} \leq 16\text{V}$
Load Regulation		0.2	1	%	$V_{IN}=V_{OUT} + 1\text{V}$ , $10\text{mA} \leq I_{OUT} \leq I_{FL}$ (note 2)
$\Delta V/\Delta T$		20	100	$\text{ppm}/^\circ\text{C}$	• $V_{OUT}$ Temp Coefficient (note 6)

		380			• $I_{OUT}=1.5\text{A}$
		600	800		• $I_{OUT}=3\text{A}$
Ground Current (note 5)		30	60	mA	• $I_{OUT}=1.5\text{A}$
		40			$I_{OUT}=3\text{A}$
Ground Pin Current at Dropout		0.9		mA	$V_{IN} = 0.5\text{V}$ less than specified $V_{OUT}$ $I_{OUT}=10\text{mA}$
Current Limit	3.0	4.5		A	$V_{OUT}=0\text{V}$ (note 4)
Output Noise Voltage		400		$\mu\text{V}_{\text{RMS}}$	$10\text{Hz}-100\text{KHz}$ , $I_{OUT}=100\text{mA}$ , $C_{OUT}=10\mu\text{F}$
		260			$10\text{Hz}-100\text{KHz}$ , $I_{OUT}=100\text{mA}$ , $C_{OUT}=33\mu\text{F}$
Reference Voltage Temperature Coefficient		20		ppm/ $^\circ\text{C}$	Note 7
<b>Reference Voltage and Adjustable Pin - XRP29302</b>					
Reference Voltage	1.228	1.24	1.252	V	
	1.215		1.265		•
	1.203		1.277		$V_{REF} \leq V_{OUT} \leq (V_{IN}-1)$ , $2.3\text{V} \leq V_{IN} \leq 16\text{V}$ $10\text{mA} \leq I_L \leq I_{FL}$ , $T_J < T_{JMAX}$
Adjust Pin Bias Current		40	80	nA	
			120		•
Adjust Pin Bias Current Temperature Coefficient		0.1		nA/ $^\circ\text{C}$	

Parameter	Min.	Typ.	Max.	Units		Conditions
<b>Power Good Flag Output – XRP29301</b>						
Output Leakage Current		0.01	1	μA	•	V <sub>OH</sub> =16V
			2		•	
Output Low Voltage		220	300	mV	•	Device set for 5V, V <sub>IN</sub> =4.5V, I <sub>OL</sub> =250μA
			400		•	
Upper Threshold Voltage	40	60		mV	•	Device set for 5V, Note 8
	25				•	
Lower Threshold Voltage		75	95	mV	•	Device set for 5V, Note 8
			140		•	
Hysteresis		15		mV		Device set for 5V, Note 8
<b>Enable Input – XRP29301/02</b>						
Input Logic Voltage Low (OFF)			0.8	V	•	V <sub>IN</sub> <10V
Input Logic Voltage High (ON)	2.4				•	
Enable Input Pin		100	600	μA	•	V <sub>EN</sub> =16V
			750		•	
			1		•	
			2		•	V <sub>EN</sub> =0.8V
Regulator Output Current in Shutdown		10	500	μA	•	Note 9

Note 2: Full load current (I<sub>FL</sub>) is defined as 3.0A.

Note 3: Dropout voltage is defined (V<sub>IN</sub>-V<sub>OUT</sub>) when the output voltage drops to 99% of its nominal value.

Note 4: V<sub>IN</sub>=V<sub>OUT</sub>(nom)+1V. Use pulse-testing procedures to minimize temperature rise.

Note 5: Ground pin current is the regulator quiescent current. The total current drawn from the source is the sum of the load current to the ground current.

Note 6: Output voltage temperature coefficient is defined as the worst case voltage change divided by the total temperature range

Note 7: Thermal regulation is defined as the change in output voltage at time T after a change in power dissipation is applied, excluding load/line regulation effects. Specifications for a 200mA load pulse as V<sub>IN</sub>=20V (a 4W pulse) for t=10ms.

Note 8: Comparator threshold is expressed in terms of a voltage differential at the Adjust terminal below the nominal reference voltage measured 6V input. To express these thresholds in terms of output voltage change, multiply the error amplifier gain = V<sub>OUT</sub>/V<sub>REF</sub> = (R<sub>1</sub> + R<sub>2</sub>)/R<sub>2</sub>. For example, at a programmable output voltage of 5V, the Error output is guaranteed to go low when the output drops by 95mVx 5V/ 1.240V = 383mV. Threshold remain constant as a percent of V<sub>OUT</sub> as V<sub>OUT</sub> is varied, with the dropout warning occurring at typically 5% below nominal, 7.7% guaranteed.

Note 9: V<sub>EN</sub> ≤ 0.8V and V<sub>IN</sub> ≤ 16V, V<sub>OUT</sub> = 0.

## THEORY OF OPERATION

The XRP29300/01/02 incorporates protection against over-current faults, reversed load insertion, over temperature operation, and positive and negative transient voltage.

## THERMAL CONSIDERATIONS

Although the XRP29300/01/02 offers limiting circuitry for overload conditions, it is still necessary to insure that the maximum junction temperature is not exceeded in the application. Heat will flow through the lowest resistance path, the junction-to-case path. In order to insure the best thermal flow of the component, proper mounting is required.

## TO-220 DESIGN EXAMPLE:

Assume that  $V_{IN} = 10V$ ,  $V_{OUT} = 5V$ ,  $I_{OUT} = 1.5A$ ,  $T_A = 50^\circ C$ ,  $\theta_{HA} = 1^\circ C/W$ ,  $\theta_{CH} = 2^\circ C/W$ , and  $\theta_{JC} = 3^\circ C/W$ , where:

$T_A$  = ambient temperature,

$\theta_{HA}$  = heatsink to ambient thermal resistance

$\theta_{CH}$  = case to heatsink thermal resistance

$\theta_{JC}$  = junction to case thermal resistance

The power calculated under these conditions is:

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} = 7.5W$$

And the junction temperature is calculated as

$$T_J = T_A + P_D \times (\theta_{HA} + \theta_{CH} + \theta_{JC})$$

or

$$T_J = 50 + 7.5 \times (1 + 2 + 3) = 95^\circ C$$

Reliable operation is insured. Capacitor Requirements

## CAPACITOR REQUIREMENTS

The output capacitor is needed to insure stability and minimize the output noise. The value of the capacitor varies with the load. However, a minimum value of  $10\mu F$  aluminum

capacitor will guarantee stability over all load conditions.

A tantalum capacitor is recommended if a faster load transient response is needed. If the power source has high AC impedance, a  $0.1\mu F$  ceramic capacitor between input & ground is recommended.

## MINIMUM LOAD CURRENT

To ensure a proper behavior of the regulator under light load, a minimum load of  $5mA$  for XRP29300/01/02 is required.

## ADJUSTABLE REGULATOR DESIGN

The XRP29300/01/02 is an adjustable regulator that can be programmed to any value between  $1.25V$  and  $16V$  using 2 external resistors,  $R_1$  and  $R_2$ . The relationship between the resistors and the output voltage is:

$$R_1 = R_2 \times \left( \frac{V_{OUT}}{1.240 - 1} \right)$$

## ERROR FLAG

The XRP29301 features an error flag that indicates either an over current or under current voltage condition. The flag output goes low, sinking  $10mA$  when either conditions occurs.

## ENABLE INPUT

The XRP29301/02 has an Enable function that switches the regulator on and off. Their thresholds are TTL compatible. When the regulator is active, approximately  $20\mu A$  flows through the Enable pin.

## TYPICAL APPLICATION CIRCUITS

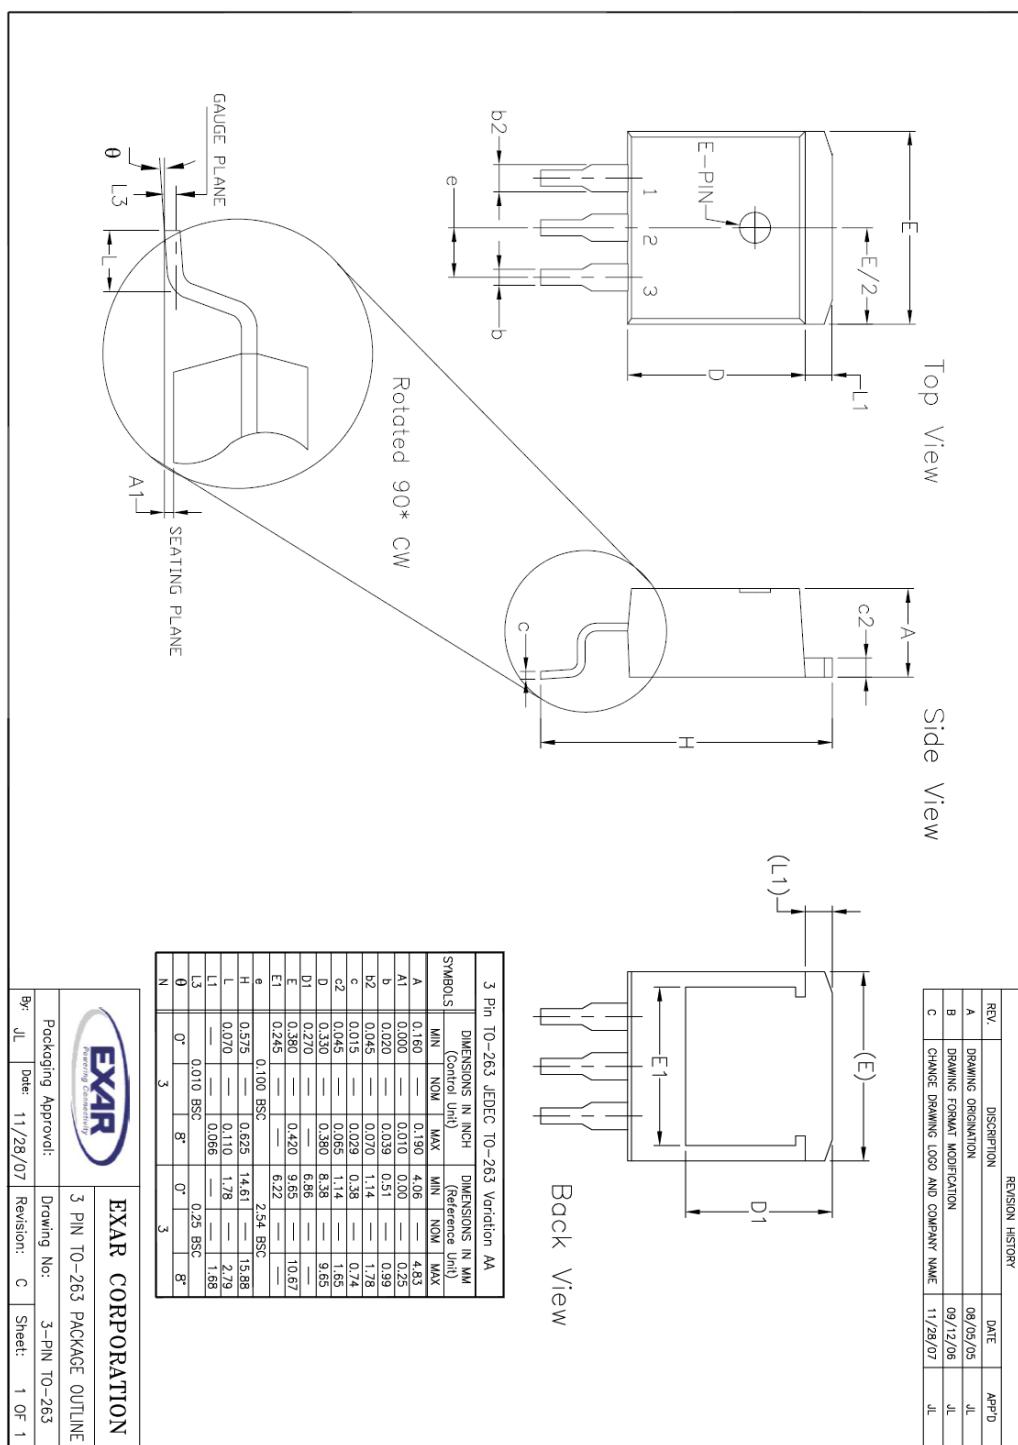

Figure 1 represents the typical implementation for an adjustable output regulator. The values of  $R_1$  and  $R_2$  set the output voltage value as follows:

$$V_{OUT} = V_{REF} \times \left( 1 + \frac{R_1}{R_2} \right)$$

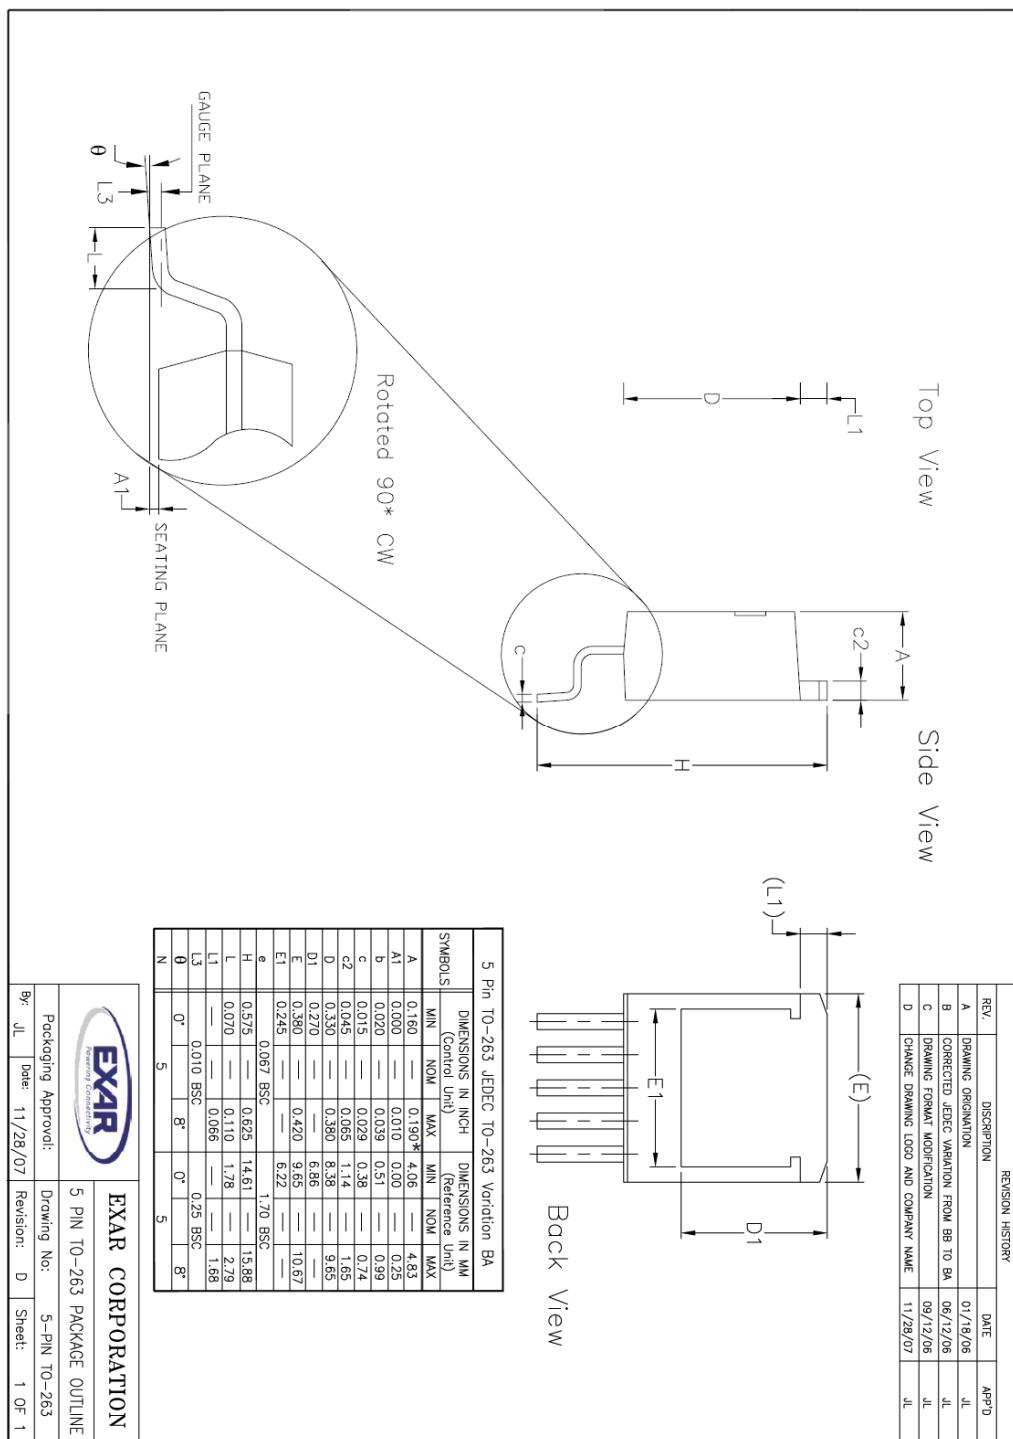

A minimum value of  $10k\Omega$  is recommended for  $R_2$  with a range between  $10k\Omega$  and  $47k\Omega$ .

## PACKAGE SPECIFICATION

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

#### Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помошь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помошь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
