

MicroPower Microprocessor Reset Circuit with Manual Reset

Features

- 1.2V to 6V Input Voltage Range
- Low Quiescent Current : less Than 1.5 μ A
- High accuracy detection threshold : $\pm 1.5\%$
- Fixed trimmed reset thresholds for 1.5V, 1.75V, 2.32V, 2.63V, 2.93V, 3.08V, 3.9V, 4.38V.
- Manual Reset Input
- Reset Timeout Period 250ms
- Available output configurations
 - Open-drain output
 - CMOS active high output
 - CMOS active low output
- SOT-23-5 package
- No external components

Applications

- Computers
- Cell Phones
- Portable Electronics
- μ P Power Supply Monitoring

General Description

The APR3101/2/3 are designed to monitor voltage supplies in μ P and digital systems. The quiescent current is extremely low, typically 1.5 μ A, making it ideal for portable battery operated equipment. The APR3101/2/3 operate by monitoring the system power supply voltage. When the input voltage drops below a fixed threshold or whenever manual reset is asserted, the device asserts a reset signal for a fixed time period after Vcc rises above the fixed threshold or manual reset is deasserted. The APR3101/2/3 series is available with three output stage versions: APR3101 push-pull active low output, APR3102 push-pull active high output and APR3103 open drain active low output. The APR3101/2/3 also have a debounced manual reset input that is provided to override the reset monitor. They are also designed to reject fast line transient glitches on Vcc. The APR3101/2/3 are come in a miniature SOT-23-5 package.

TSTG	Storage Temperature Range	-65 to +150	°C

Pin Function Description

PIN		Description
No.	Name	
1	GND	Ground connection
2	NC	No internal connection
3	RESET (APR3101/3)	RESET output remains low while V_{CC} is below the reset threshold and remains so for a fixed time period after V_{CC} raises above the reset threshold.
	RESET (APR3102)	RESET output remains high while V_{CC} is below the reset threshold and remains so for a fixed time period after V_{CC} raises above the reset threshold.
4	$\overline{MR}$	Manual Reset active low input. A logic low signal on $\overline{MR}$ asserts a reset condition. Asserted reset continues as long as MR is low and for a fixed time period after $\overline{MR}$ returns high.
5	V_{CC}	Supply Voltage (+1.2V to +6V)

Note: The pin sequence here might not be correct for all different package types, and please refer pin configuration in page1 for correct pin assignment.

Part Number Description

Part Number	Part Description
APR3101	Reset Output Push Pull Active Low with Delay
APR3102	Reset Output Push Pull Active High with Delay
APR3103	Reset Output Open Drain Active Low with Delay

Electrical Characteristics

$V_{IN} = 5V$, $T_A = -40$ to $85^\circ C$ unless otherwise noted. Typical values are at $T_A = 25^\circ C$, $V_{CC} = 5V$ for 4.38V versions, $V_{CC} = 3.3V$ for 3.08/2.93V versions, $V_{CC} = 3.0V$ for 2.63V. versions and $V_{CC} = 2.5V$ for 2.32V versions, $V_{CC} = 2.0V$ for 1.75V versions, $V_{CC} = 1.8V$ for 1.5V versions.

Symbol	Parameter	Test Conditions	APR3101/2/3			Unit
			Min.	Typ.	Max.	
V_{CC}	Supply Voltage		1.2		6	V
I_{CC}	Supply Current	$V_{CC} = 1.5V \sim 6V$		1.5	4	μA
		$T_A = -40$ to $85^\circ C$		3	5	
V_{TH}	Reset Threshold	$T_A = 25^\circ C$		$\pm 1.5\%$		
		$T_A = -40$ to $85^\circ C$		$\pm 2\%$		
V_{HYST}	Hysteresis Range			20		mV
T_{RTP}	Reset Timeout Period		150	250	350	ms
V_{OL}	Reset Output Low	$I_{SINK} = 1.2mA$			0.5	V
V_{OH}	Reset Output High	$I_{SOURCE} = 0.6mA$	$0.8 * V_{CC}$			
T_D	V_{CC} to Reset Delay	$V_{CC} = V_{TH}$ to $(V_{TH} - 100mV)$		25		μS
I_{LE}	Reset Output Leakage				0.5	μA
T_{MPW}	MR Minimum Pulse Width		10			μS
T_{MRD}	MR to Reset Delay			0.5		μS
V_{MIL}	MR Input Low Threshold				$0.4 * V_{CC}$	V
V_{MIH}	MR Input High Threshold		$0.5 * V_{CC}$			
R_{MR}	MR Pull-Up resistance		30	47	70	K Ω

Application Information

V_{CC} Transient Rejection

The APR3101/2/3 have the function to reject the transient glitches from the power line. The Maximum Transient Duration vs. Reset Threshold Overdrive shows at Typical Characteristics. The transient voltage with the duration under the curve will not generate a reset signal, e.g. a transient of 100mV below the reset threshold voltage have the duration more than 35us, it will generate a reset signal. Connect a 0.1uF bypass capacitor to the V_{CC} pin can improve the transient immunity.

Manual Reset Input

Force the $\overline{\text{MR}}$ low asserts the $\overline{\text{reset}}$ signal, asserted reset continues as long as $\overline{\text{MR}}$ is low and after the $\overline{\text{MR}}$ goes high the reset signal is maintained for a fixed timeout period. The $\overline{\text{MR}}$ is internally connected a 47k Ω resistor to V_{CC}, so it can be floating if $\overline{\text{MR}}$ is not used. The MR input also has a debounce time 500ns to avoid the glitches. It allows use of a mechanical switch or a TTL, and CMOS logic signal.

Reset Output

The APR3101/2/3 have 3 output stage versions: APR3101 is an active low push-pull output, when the V_{CC} drops below the reset threshold or $\overline{\text{MR}}$ goes low, the RESET output generates a low signal. APR3102 is an active high push-pull output, when the V_{CC} drops below the reset threshold or $\overline{\text{MR}}$ goes low; the RESET output generates a high signal (see Timing Chart). APR3103 is an active low open drain output, the RESET output must be connected a pull-up resistor to a supply voltage that is lower than 6V, it suits to use in multiple voltage systems (see Figure 2). The APR3101 RESET output is valid until the V_{CC}=1.2V, below 1.2V

the IC is shutdown, and the output becomes a floating state. If it is a trouble, a resistor should be connected from reset output to ground to keep the reset output low (see Figure 1). For The APR3102, a pull-up resistor to V_{CC} is required to keep the valid reset output for V_{CC} below 1.2V. ¶@

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
