

MOS INTEGRATED CIRCUIT MC-4R64CEE6B, 4R64CEE6C

Direct Rambus™ DRAM RIMM™ Module 64M-BYTE (32M-WORD x 16-BIT)

Description

The Direct Rambus RIMM module is a general-purpose high-performance memory module subsystem suitable for use in a broad range of applications including computer memory, personal computers, workstations, and other applications where high bandwidth and low latency are required.

MC-4R64CEE6B, 4R64CEE6C modules consists of four 128M Direct Rambus DRAM (Direct RDRAM™) devices (μ PD488448). These are extremely high-speed CMOS DRAMs organized as 8M words by 16 bits. The use of Rambus Signaling Level (RSL) technology permits 600MHz, 711MHz or 800MHz transfer rates while using conventional system and board design technologies.

Direct RDRAM devices are capable of sustained data transfers at 1.25 ns per two bytes (10 ns per sixteen bytes).

The architecture of the Direct RDRAM enables the highest sustained bandwidth for multiple, simultaneous, randomly addressed memory transactions. The separate control and data buses with independent row and column control yield over 95 % bus efficiency. The Direct RDRAM's 32 banks support up to four simultaneous transactions per device.

Features

- 184 edge connector pads with 1mm pad spacing
- 64 MB Direct RDRAM storage
- Each RDRAM® has 32 banks, for 128 banks total on module
- Gold plated contacts
- RDRAMs use Chip Scale Package (CSP)
- Serial Presence Detect support
- Operates from a 2.5 V supply
- Low power and powerdown self refresh modes
- Separate Row and Column buses for higher efficiency

The information in this document is subject to change without notice. Before using this document, please confirm that this is the latest version.
Not all devices/types available in every country. Please check with local NEC representative for availability and additional information.

Order information

Part number	Organization	I/O Freq. MHz	RAS access time ns	Package	Mounted devices
MC-4R64CEE6B - 845	32M x 16	800	45	184 edge connector pads RIMM with heat spreader Edge connector : Gold plated	4 pieces of μ PD488448FB FBGA (D ² BGA™) package
MC-4R64CEE6B - 745		711	45		
MC-4R64CEE6B - 653		600	53		
MC-4R64CEE6C - 845		800	45		4 pieces of μ PD488448FF FBGA (μ BGA®) package
MC-4R64CEE6C - 745		711	45		
MC-4R64CEE6C - 653		600	53		

Module Pad Configuration

LCFM, LCFMN,
RCFM, RCFMN : Clock from master
LCTM, LCTMN,
RCTM, RCTMN : Clock to master
LCMD, RCMD : Serial Command Pad
LROW2 - LROW0,
RROW2 - RROW0 : Row bus
LCOL4 - LCOL0,
RCOL4 - RCOL0 : Column bus
LDQA8 - LDQA0,
RDQA8 - RDQA0 : Data bus A
LDQB8 - LDQB0,
RDQB8 - RDQB0 : Data bus B
LSCK, RSCK : Clock input
SA0 - SA2 : Serial Presence Detect Address
SCL, SDA : Serial Presence Detect Clock
SIN, SOUT : Serial I/O
SVDD : SPD Voltage
SWP : Serial Presence Detect Write Protect
VCMOS : Supply voltage for serial pads
VDD : Supply voltage
VREF : Logic threshold
GND : Ground reference
NC : These pads are not connected

Module Connector Pad Description

(1/2)

Signal	I/O	Type	Description
GND	–	–	Ground reference for RDRAM core and interface. 72 PCB connector pads.
LCFM	I	RSL	Clock from master. Interface clock used for receiving RSL signals from the Channel. Positive polarity.
LCFMN	I	RSL	Clock from master. Interface clock used for receiving RSL signals from the Channel. Negative polarity.
LCMD	I	VCMOS	Serial Command used to read from and write to the control registers. Also used for power management.
LCOL4..LCOL0	I	RSL	Column bus. 5-bit bus containing control and address information for column accesses.
LCTM	I	RSL	Clock to master. Interface clock used for transmitting RSL signals to the Channel. Positive polarity.
LCTMN	I	RSL	Clock to master. Interface clock used for transmitting RSL signals to the Channel. Negative polarity.
LDQA8..LDQA0	I/O	RSL	Data bus A. A 9-bit bus carrying a byte of read or write data between the Channel and the RDRAM. LDQA8 is non-functional on modules with x16 RDRAM devices.
LDQB8..LDQB0	I/O	RSL	Data bus B. A 9-bit bus carrying a byte of read or write data between the Channel and the RDRAM. LDQB8 is non-functional on modules with x16 RDRAM devices.
LROW2..LROW0	I	RSL	Row bus. 3-bit bus containing control and address information for row accesses.
LSCK	I	VCMOS	Serial clock input. Clock source used to read from and write to the RDRAM control registers.
NC	–	–	These pads are not connected. These 24 connector pads are reserved for future use.
RCFM	I	RSL	Clock from master. Interface clock used for receiving RSL signals from the Channel. Positive polarity.
RCFMN	I	RSL	Clock from master. Interface clock used for receiving RSL signals from the Channel. Negative polarity.
RCMD	I	VCMOS	Serial Command Input used to read from and write to the control registers. Also used for power management.
RCOL4..RCOL0	I	RSL	Column bus. 5-bit bus containing control and address information for column accesses.
RCTM	I	RSL	Clock to master. Interface clock used for transmitting RSL signals to the Channel. Positive polarity.
RCTMN	I	RSL	Clock to master. Interface clock used for transmitting RSL signals to the Channel. Negative polarity.
RDQA8..RDQA0	I/O	RSL	Data bus A. A 9-bit bus carrying a byte of read or write data between the Channel and the RDRAM. RDQA8 is non-functional on modules with x16 RDRAM devices.
RDQB8..RDQB0	I/O	RSL	Data bus B. A 9-bit bus carrying a byte of read or write data between the Channel and the RDRAM. RDQB8 is non-functional on modules with x16 RDRAM devices.
RROW2..RROW0	I	RSL	Row bus. 3-bit bus containing control and address information for row accesses.

(2/2)

Signal	I/O	Type	Description
RSCK	I	V _{CMOS}	Serial clock input. Clock source used to read from and write to the RDRAM control registers.
SA0	I	SV _{DD}	Serial Presence Detect Address 0.
SA1	I	SV _{DD}	Serial Presence Detect Address 1.
SA2	I	SV _{DD}	Serial Presence Detect Address 2.
SCL	I	SV _{DD}	Serial Presence Detect Clock.
SDA	I/O	SV _{DD}	Serial Presence Detect Data (Open Collector I/O).
SIN	I/O	V _{CMOS}	Serial I/O for reading from and writing to the control registers. Attaches to SIO0 of the first RDRAM on the module.
SOUT	I/O	V _{CMOS}	Serial I/O for reading from and writing to the control registers. Attaches to SIO1 of the last RDRAM on the module.
SV _{DD}	—	—	SPD Voltage. Used for signals SCL, SDA, SWP, SA0, SA1 and SA2.
SWP	I	SV _{DD}	Serial Presence Detect Write Protect (active high). When low, the SPD can be written as well as read.
V _{CMOS}	—	—	CMOS I/O Voltage. Used for signals CMD, SCK, SIN, SOUT.
V _{DD}	—	—	Supply voltage for the RDRAM core and interface logic.
V _{REF}	—	—	Logic threshold reference voltage for RSL signals.

Block Diagram

- Remarks**
1. Rambus Channel signals form a loop through the RIMM module, with the exception of the SIO chain.
 2. See Serial Presence Detection Specification for information on the SPD device and its contents.

Electrical Specification

Absolute Maximum Ratings

Symbol	Parameter	MIN.	MAX.	Unit
$V_{I,ABS}$	Voltage applied to any RSL or CMOS signal pad with respect to GND	-0.3	$V_{DD} + 0.3$	V
$V_{DD,ABS}$	Voltage on V_{DD} with respect to GND	-0.5	$V_{DD} + 1.0$	V
T_{STORE}	Storage temperature	-50	+100	°C

Caution Exposing the device to stress above those listed in Absolute Maximum Ratings could cause permanent damage. The device is not meant to be operated under conditions outside the limits described in the operational section of this specification. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

DC Recommended Electrical Conditions

Symbol	Parameter and conditions		MIN.	MAX.	Unit
V_{DD}	Supply voltage		2.50 – 0.13	2.50 + 0.13	V
V_{CMOS}	CMOS I/O power supply at pad	2.5V controllers	2.5 – 0.13	2.5 + 0.25	V
		1.8V controllers	1.8 – 0.1	1.8 + 0.2	
V_{REF}	Reference voltage		1.4 – 0.2	1.4 + 0.2	V
V_{IL}	RSL input low voltage		$V_{REF} - 0.5$	$V_{REF} - 0.2$	V
V_{IH}	RSL input high voltage		$V_{REF} + 0.2$	$V_{REF} + 0.5$	V
$V_{IL,CMOS}$	CMOS input low voltage		-0.3	$0.5V_{CMOS} - 0.25$	V
$V_{IH,CMOS}$	CMOS input high voltage		$0.5V_{CMOS} + 0.25$	$V_{CMOS} + 0.3$	V
$V_{OL,CMOS}$	CMOS output low voltage, $I_{OL,CMOS} = 1\text{ mA}$		—	0.3	V
$V_{OH,CMOS}$	CMOS output high voltage, $I_{OH,CMOS} = -0.25\text{ mA}$		$V_{CMOS} - 0.3$	—	V
I_{REF}	V_{REF} current, $V_{REF,MAX}$		-40.0	+40.0	μA
$I_{SCK,CMD}$	CMOS input leakage current, ($0 \leq V_{CMOS} \leq V_{DD}$)		-40.0	+40.0	μA
$I_{SIN,SOUT}$	CMOS input leakage current, ($0 \leq V_{CMOS} \leq V_{DD}$)		-10.0	+10.0	μA

AC Electrical Specifications

Symbol	Parameter and Conditions		MIN.	TYP.	MAX.	Unit
Z	Module Impedance		25.2	28	30.8	Ω
T _{PD}	Average clock delay from finger to finger of all RSL clock nets (CTM, CTMN, CFM, and CFMN)	-845			1.25	ns
		-745			1.25	
		-653			1.25	
ΔT _{PD}	Propagation delay variation of RSL signals with respect to T _{PD} ^{Note1,2}		-21		+21	ps
ΔT _{PD-CMOS}	Propagation delay variation of SCK and CMD signals with respect to an average clock delay ^{Note1}		-100		+100	ps
V _o /V _{IN}	Attenuation Limit	-845			12	%
		-745			12	
		-653			8	
V _{XF} /V _{IN}	Forward crosstalk coefficient (300ps input rise time 20% - 80%)	-845			2	%
		-745			2	
		-653			2	
V _{XB} /V _{IN}	Backward crosstalk coefficient (300ps input rise time 20% - 80%)	-845			1.5	%
		-745			1.5	
		-653			1.5	
R _{DC}	DC Resistance Limit	-845			0.6	Ω
		-745			0.6	
		-653			0.6	

Notes 1. T_{PD} or Average clock delay is defined as the average delay from finger to finger of all RSL clock nets (CTM, CTMN, CFM, and CFMN).

- 2.** If the RIMM module meets the following specification, then it is compliant to the specification.
If the RIMM module does not meet these specifications, then the specification can be adjusted by the "Adjusted ΔT_{PD} Specification" table.

Adjusted ΔT_{PD} Specification

Symbol	Parameter and conditions	Adjusted MIN./MAX.	Absolute		Unit
			MIN.	MAX.	
ΔT _{PD}	Propagation delay variation of RSL signals with respect to T _{PD}	+/- [17+(18*N*ΔZ0)] ^{Note}	-30	+30	ps

Note N = Number of RDRAM devices installed on the RIMM module.

$$\Delta Z0 = \text{delta } Z0\% = (\text{MAX. } Z0 - \text{MIN. } Z0) / (\text{MIN. } Z0)$$

(MAX. Z0 and MIN. Z0 are obtained from the loaded (high impedance) impedance coupons of all RSL layers on the module.)

RIMM Module Current Profile

I _{DD}	RIMM module power conditions	MAX.	Unit
I _{DD1}	One RDRAM in Read , balance in NAP mode	TBD	mA
I _{DD2}	One RDRAM in Read , balance in Standby mode	TBD	mA
I _{DD3}	One RDRAM in Read , balance in Active mode	TBD	mA
I _{DD4}	One RDRAM in Write, balance in NAP mode	TBD	mA
I _{DD5}	One RDRAM in Write, balance in Standby mode	TBD	mA
I _{DD6}	One RDRAM in Write, balance in Active mode	TBD	mA

Timing Parameters

The following timing parameters are from the RDRAMs pins, not the RIMM. Please refer to the RDRAM data sheet (μ PD488448, 488488) for detailed timing diagrams.

Parameter	Description	MIN.			MAX.	Units
		-845	-745	-653		
t_{RC}	Row Cycle time of RDRAM banks - the interval between ROWA packets with ACT commands to the same bank.	28	28	28	—	t_{CYCLE}
t_{RAS}	RAS-asserted time of RDRAM bank - the interval between ROWA packet with ACT command and next ROWR packet with $PRER^{Note 1}$ command to the same bank.	20	20	20	$64\mu s^{Note 2}$	t_{CYCLE}
t_{RP}	Row Precharge time of RDRAM banks - the interval between ROWR packet with $PRER^{Note 1}$ command and next ROWA packet with ACT command to the same bank.	8	8	8	—	t_{CYCLE}
t_{PP}	Precharge-to-precharge time of RDRAM device - the interval between successive ROWR packets with $PRER^{Note 1}$ commands to any banks of the same device.	8	8	8	—	t_{CYCLE}
t_{RR}	RAS-to-RAS time of RDRAM device - the interval between successive ROWA packets with ACT commands to any banks of the same device.	8	8	8	—	t_{CYCLE}
t_{RCD}	RAS-to-CAS Delay - the interval from ROWA packet with ACT command to COLC packet with RD or WR command. Note - the RAS-to-CAS delay seen by the RDRAM core (t_{RCD-C}) is equal to $t_{RCD-C} = 1 + t_{RCD}$ because of differences in the row and column paths through the RDRAM interface.	9	7	7	—	t_{CYCLE}
t_{CAC}	CAS Access delay - the interval from RD command to Q read data. The equation for t_{CAC} is given in the TPARM register.	8	8	8	12	t_{CYCLE}
t_{CWD}	CAS Write Delay - interval from WR command to D write data.	6	6	6	6	t_{CYCLE}
t_{CC}	CAS-to-CAS time of RDRAM bank – the interval between successive COLC commands.	4	4	4	—	t_{CYCLE}
t_{PACKET}	Length of ROWA, ROWR, COLC, COLM or COLX packet.	4	4	4	4	t_{CYCLE}
t_{RTR}	Interval from COLC packet with WR command to COLC packet which causes retire, and to COLM packet with bytemask.	8	8	8	—	t_{CYCLE}
t_{OFFP}	The interval (offset) from COLC packet with RDA command, or from COLC packet with retire command (after WRA automatic precharge), or from COLC packet with PREC command, or from COLX packet with PREX command to the equivalent ROWR packet with PRER. The equation for t_{OFFP} is given in the TPARM register.	4	4	4	4	t_{CYCLE}
t_{RDP}	Interval from last COLC packet with RD command to ROWR packet with PRER.	4	4	4	—	t_{CYCLE}
t_{RTP}	Interval from last COLC packet with automatic retire command to ROWR packet with PRER.	4	4	4	—	t_{CYCLE}

Notes 1. Or equivalent PREC or PREX command.

2. This is a constraint imposed by the core, and is therefore in units of ms rather than t_{CYCLE} .

NOTES FOR CMOS DEVICES

① PRECAUTION AGAINST ESD FOR SEMICONDUCTORS

Note:

Strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it once, when it has occurred. Environmental control must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor devices on it.

② HANDLING OF UNUSED INPUT PINS FOR CMOS

Note:

No connection for CMOS device inputs can be cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND with a resistor, if it is considered to have a possibility of being an output pin. All handling related to the unused pins must be judged device by device and related specifications governing the devices.

③ STATUS BEFORE INITIALIZATION OF MOS DEVICES

Note:

Power-on does not necessarily define initial status of MOS device. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the devices with reset function have not yet been initialized. Hence, power-on does not guarantee out-pin levels, I/O settings or contents of registers. Device is not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for devices having reset function.

CAUTION FOR HANDLING MEMORY MODULES

When handling or inserting memory modules, be sure not to touch any components on the modules, such as the memory IC, chip capacitors and chip resistors. It is necessary to avoid undue mechanical stress on these components to prevent damaging them.

When re-packing memory modules, be sure the modules are NOT touching each other. Modules in contact with other modules may cause excessive mechanical stress, which may damage the modules.

- The information in this document is subject to change without notice. Before using this document, please confirm that this is the latest version.
 - No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.
 - NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.
 - Descriptions of circuits, software, and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software, and information in the design of the customer's equipment shall be done under the full responsibility of the customer. NEC Corporation assumes no responsibility for any losses incurred by the customer or third parties arising from the use of these circuits, software, and information.
 - While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.
 - NEC devices are classified into the following three quality grades:
 "Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.
 - Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots
 - Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)
 - Specific: Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.
- The quality grade of NEC devices is "Standard" unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
