1. Introduction

The unique FXP543 Venti Circular antenna is the smallest 3-in-1 MIMO, internal flexible monopole type antenna for WiFi 2.4/5.8GHz in the market. Featuring a thickness of only 0.15mm, the FXP543 is an ideal solution for gateways, routers, smart city applications such as WiFi hot spots, smart lighting control, video surveillance and traffic monitoring.

The FXP543 has over 45% efficiency in both the 2.4GHz and 5GHz bands. It has been designed on a flexible material with a circular form-factor and cable connection for an easy installation. Great care has been taken to have high isolation (at least 10dB) between the three elements to ensure optimal MIMO system throughput.

The antenna comes with double-sided 3M adhesive for easy and robust "peel and stick" mounting. Three cables terminate with IPEX (u.fl) connectors for easy installation.

*If needed in order to comply with peak gain restrictions with certain wireless modules, the antenna peak gain can be reduced by simply using longer cable, or when tested in the actual device environment.

Many module manufacturers specify peak gain requirements for any antennas that is to be connected to that module. Upon testing of any of our antenna with your device and a selection of appropriate layout, integration technique, or cable, Taoglas can make sure any of our antennas peak gain will be below the peak gain requirements. Taoglas can then issue a specification and/or report for this selected WiFi antennas in your device that will clearly show it complying with the peak gain requirements, so you can be assured you are meeting regulatory requirements for that module.
