

**1500 WATT LOW VOLTAGE TRANSIENT
 VOLTAGE SUPPRESSOR**
Qualified per MIL-PRF-19500/500

DEVICES

1N5907

LEVELS

**JAN
 JANTX
 JANTXV**

DESCRIPTION

This unidirectional low voltage Transient Voltage Suppressor (TVS) device for the 1N5907 JEDEC registration has a high Peak Pulse Power rating of 1500 W with extremely fast response times. The 1N5907 is available in a military qualified version as described in the Features section herein. It's most often used for protecting against transients from inductive switching environments, induced RF effects, or induced secondary lightning effects as found in surge levels of IEC61000-4-5 described herein. It's also very successful in protecting airborne avionics and electrical systems when low voltage is required. Since their response time is virtually instantaneous, they can also protect from ESD and EFT per IEC61000-4-2 and IEC61000-4-4.

IMPORTANT: For the most current data, consult *MICROSEMI's* website:
<http://www.microsemi.com>

DO-13 (DO-202A)

FEATURES

- Unidirectional TVS for thru-hole mounting
- Suppresses transients up to 1500 watts @ 10/1000 μ s (Figure 1) in less than 100 pico seconds
- Low working voltage (V_{WM}) of 5 V
- Hermetic sealed DO-13 metal package for 1N5907
- JAN/TX/TXV military qualification available for 1N5907 per MIL-PRF-19500/500 by adding JAN, JANTX, or JANTXV prefix, e.g. JANTXV1N5907
- Surface mount equivalent packages also available as SMCJ5.0 or SMCG5.0 in separate data sheet (consult factory for other surface mount options)

APPLICATIONS / BENEFITS

- Protection from switching transients and induced RF
- Protects TTL, ECL, DTL, MOS, MSI, and other integrated circuits requiring 5.0 V or lower power supplies
- Protection from ESD and EFT per IEC 61000-4-2 and IEC 61000-4-4
- Secondary lightning protection per IEC61000-4-5 with 42 Ohms source impedance: Class 1 thru 4
- Secondary lightning protection per IEC61000-4-5 with 12 Ohms source impedance: Class 1 thru 4
- Secondary lightning protection per IEC61000-4-5 with 2 Ohms source impedance: Class 2 & 3
- 1N5907 Inherently radiation hard as described in Microsemi MicroNote 050

MAXIMUM RATINGS

- 1500 Watts for 10/1000 μ s at lead temperature (T_L) 25°C (See Figs. 1, 2, and 4) with repetition rate of 0.01% or less*
- Operating & Storage Temperatures: -65° to +175°C for 1N5907
- THERMAL RESISTANCE (junction to lead): 50°C/W for 1N5907
- THERMAL RESISTANCE (junction to ambient): 110 °C/W for 1N5907
- DC Power Dissipation* (1N5907): 1 Watt at $T_L \leq 125^\circ\text{C}$ 3/8" (10 mm) from body, or 1 Watt at $T_A \leq +65^\circ\text{C}$ when mounted on FR4 PC board as described for thermal resistance junction to ambient
- Forward surge current: 200 A for 8.3ms half-sine wave at $T_A = +25^\circ\text{C}$
- Solder Temperatures: 260 ° C for 10 s (maximum)

MECHANICAL AND PACKAGING

- CASE (1N5907): DO-13 (DO-202AA) welded hermetically sealed metal and glass
- FINISH: External metal surfaces are Tin-Lead (Sn-Pb) plated and solderable per MIL-STD-750 method 2026
- POLARITY: Polarity indicated by diode symbol or cathode band (cathode connected to case for 1N5907)
- MARKING: Part number and polarity symbol
- WEIGHT: 1.4 grams. (Approx)
- TAPE & REEL option: Standard per EIA-296 (add "TR" suffix to part number)
- See package dimension on last page

* TVS devices are not typically used for dc power dissipation and are instead operated at or less than their rated standoff voltage (V_{WM}) except for transients that briefly drive the device into avalanche breakdown (V_{BR} to V_C region).

ELECTRICAL CHARACTERISTICS @ 25°C

JEDEC Type No.	Reverse Standoff Voltage V_{WM} (NOTE 1) Volts	Minimum Breakdown Voltage $V_{(BR)}$ @ 1 mA Volts	Maximum Standby Current I_D @ V_{WM} μA	Maximum Clamping Voltage V_C @ I_{PP1} (FIG. 3) Volts	Peak Pulse Current I_{PP1} (FIG. 3) Amps	Maximum Clamping Voltage V_C @ I_{PP2} (FIG. 3) Volts	Peak Pulse Current I_{PP2} (FIG. 3) Amps	Maximum Clamping Voltage V_C @ I_{PP3} (FIG. 3) Volts	Peak Pulse Current I_{PP3} (FIG. 3) Amps
1N5907 *	5.0	6.0	300	7.6	30	8.0	60	8.5	120

* Also available in military qualified types with a JAN, JANTX, or JANTXV prefix per MIL-PRF-19500/500.

NOTE 1: A TVS is normally selected according to the reverse “Standoff Voltage” V_{WM} which should be equal to or greater than the dc or continuous peak operating voltage level.

SYMBOLS & DEFINITIONS

Symbol	Definition
V_{WM}	Standoff Voltage: Applied Reverse Voltage to assure a nonconductive condition. (See Note 1 above)
$V_{(BR)}$	Breakdown Voltage: This is the Breakdown Voltage the device will exhibit at 25°C
V_C	Maximum Clamping Voltage: The maximum peak voltage appearing across the TVS when subjected to the peak pulse current in a one millisecond time interval. The peak pulse voltage is the combination of voltage rise due to both the series resistance and thermal rise and positive temperature coefficient ($\alpha_{V(BR)}$)
I_{PP}	Peak Pulse Current: The peak current during the impulse (See Figure 2)
P_{PP}	Peak Pulse Power: The pulse power as determined by the product of V_C and I_{PP}
I_D	Standby Current: The current at the standoff voltage (V_{WM})
$I_{(BR)}$	Breakdown Current: The current used for measuring Breakdown Voltage ($V_{(BR)}$)

PACKAGE DIMENSIONS

NOTES:

1. Dimensions are in inches.
2. Millimeters are given for general information only.
3. The major diameter is essentially constant along its length.
4. Within this zone, diameter may vary to allow for lead finishes and irregularities.
5. Dimension to allow for pinch or seal deformation anywhere along tubulation.
6. Lead 1 (cathode) shall be electrically connected to the case.
7. In accordance with ASME Y14.5M, diameters are equivalent to ϕ x symbology.

Symbol	Dimensions				Notes
	Inches		Millimeters		
	Min	Max	Min	Max	
BD	.215	.235	5.46	5.97	
BL	.293	.357	7.44	9.07	3

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
