

Dual, Audio, Log Taper Digital Potentiometers

General Description

The MAX5408–MAX5411 dual, logarithmic taper digital potentiometers, with 32-tap points each, replace mechanical potentiometers in audio applications requiring digitally controlled resistors. The MAX5408/MAX5410 are dual potentiometers with one wiper per potentiometer. The MAX5409/MAX5411 are dual potentiometers with two wipers per potentiometer (see *Functional Diagram*). An SPI™-compatible serial interface controls the wiper positions. The MAX5408–MAX5411 have a factory-set resistance of 10kΩ per potentiometer. A zero-crossing detect feature minimizes the audible noise generated by wiper transitions. The MAX5408–MAX5411 have nominal temperature coefficients of 35ppm/°C end-to-end and 5ppm/°C ratiometric. The MAX5408–MAX5411 are available in 16-pin QSOP and 16-pin thin QFN packages and are specified over the extended temperature range (-40°C to +85°C).

Applications

Stereo Volume Control
Fading and Balancing Stereo Signals
Mechanical Potentiometer Replacement

Functional Diagram appears at end of data sheet.
SPI is a trademark of Motorola, Inc.

Features

- ◆ Log Taper with 2dB Steps Between Taps
- ◆ 32-Tap Positions for Each Wiper
- ◆ Small 16-Pin QSOP/QFN Packages
- ◆ Single-Supply Voltage Operation
 - +2.7V to +3.6V (MAX5408/MAX5409)
 - +4.5V to +5.5V (MAX5410/MAX5411)
- ◆ Low 0.5μA Standby Supply Current
- ◆ Zero-Crossing Detection for Clickless Switching
- ◆ Mute Function to -90dB
- ◆ 10kΩ Fixed Resistance Value
- ◆ 3-Wire SPI-Compatible Serial Data Interface
- ◆ Power-On Reset: Wiper Goes to Maximum Attenuation
- ◆ Digital Output for Readback and Daisy-Chaining Capabilities

Ordering Information

| PART | TEMP RANGE | PIN-PACKAGE | WIPERS PER RESISTOR |

| MAX5408EEE | -40°C to +85°C | 16 QSOP | 1 |
| MAX5408ETE | -40°C to +85°C | 16 Thin QFN | 1 |
| MAX5409EEE | -40°C to +85°C | 16 QSOP | 2 |

Ordering Information continued at end of data sheet.

Pin Configurations

Dual, Audio, Log Taper Digital Potentiometers

ABSOLUTE MAXIMUM RATINGS

V_{DD} , V_{LOGIC} , \overline{CS} , SCLK, DIN to GND -0.3V to +6V
 H_- , L_- , and W_- to GND -0.3V to ($V_{DD} + 0.3V$)
 DOUT to GND -0.3V to ($V_{DD} + 0.3V$)
 AGND to GND -0.3V to +0.3V
 Input and Output Latchup Immunity $\pm 200mA$
 Maximum Continuous Current into H_- , L_- , and W_- $\pm 500\mu A$

Continuous Power Dissipation ($T_A = +70^\circ C$)
 16-Pin QSOP (derate 8.3mW/ $^\circ C$ above $+70^\circ C$) 666.7mW
 16-Pin QFN (derate 18.5mW/ $^\circ C$ above $+70^\circ C$) 1481mW
 Operating Temperature Range $-40^\circ C$ to $+85^\circ C$
 Storage Temperature Range $-60^\circ C$ to $+150^\circ C$
 Maximum Junction Temperature $+150^\circ C$
 Lead Temperature (soldering, 10s) $+300^\circ C$

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

Detailed Description

Digital Serial Interface

An SPI-compatible serial interface controls the MAX5408–MAX5411. The input word to the device is eight bits long, composed of three address bits (A0, A1, and A2), followed by five data bits, with MSB first (see Tables 1 and 2). The first three address bits set the value of internal registers. The five data bits control the wiper position. For certain commands, some of the five data bits are “don't cares”, but must be sent to the device.

The serial data is listed in Tables 1 and 2.

The control code determines:

- Potentiometer to update or register to set.
- Data for mute register (Tables 3 and 4).
- Data for zero-crossing detection register (Tables 5 and 6).

The data bits control the position of the wiper (Table 7). A logic low on the chip-select input (CS) enables the device's serial interface. A logic high on CS disables the interface control circuitry. See Figure 1 for serial-interface timing description.

| 3 | -6 |
| 4 | -8 |
| ⋮ | ⋮ |
| ⋮ | ⋮ |
| 30 | -60 |
| 31 | -62 |
| MUTE | <-90 |

The digital output, DOUT, lags the digital input signal, DIN by 8.5 clock cycles. Force \overline{CS} high to disable DOUT, placing DOUT in three-state mode. Force \overline{CS} low to enable DOUT and disable three-state mode.

Force \overline{CS} high, after a word has been written to the MAX5408–MAX5411 to make a readback request. The next \overline{CS} low period writes the requested data to DOUT.

A readback request overwrites any previous data in the shift register. Note that the data appears at DOUT in the order: A0, A1, A2, D4, D3, D2, D1, D0. A0 will be available after the first high-to-low transition of SCLK when \overline{CS} is low. The input continues to load the shift register while data is being read out of the MAX5408–MAX5411. The input data appears at DOUT 8.5 clock cycles later. A \overline{CS} transition from low-to-high latches the input data. For any control byte, the state of SCLK must be the same for both \overline{CS} low-to-high transitions and \overline{CS} high-to-low transitions in order to preserve the data at DOUT while \overline{CS} transitions. For proper operation, ensure that the input data remains valid on both the SCLK rising and falling edges when daisy chaining multiple devices.

Zero-Crossing Detection

The zero-crossing detection register enables the zero-crossing detect feature. The zero-crossing detect feature reduces the audible noise (“clicks and pops”) that result from wiper transitions. The wiper changes position only when the voltage at L₋ is the same as the voltage at H₋. Each wiper has a zero-crossing and timeout

Figure 5. Daisy-Chaining of Serial Interfaces

circuit (see Figure 2). With zero-crossing enabled, the MAX5408-MAX5411 change wiper position after 50ms or when zero crossing is detected.

Power-On Reset

The power-on reset (POR) feature sets all the wipers to the maximum attenuation (tap position 31, -62dB) at power-up. If either V_{DD} or V_{LOGIC} is zero volts, a power-on reset initiates when one of the supplies is brought back to the operating voltage.

Mute Function

When mute is enabled, the wipers go to -90dB attenuation. When mute is disabled, the wiper returns to its position before mute was enabled. All wipers can be muted simultaneously or independently.

Applications Information

Attenuation Control

Figure 3 shows the application of an attenuation control. The op amps are connected in a follower configuration with a fixed gain. The digitally controlled potentiometer attenuates the input signal.

Stereo Volume Control

Figure 4 shows the application of stereo volume control using MAX5409/MAX5411. The op amps are connected in a follower configuration with fixed gain. The digitally controlled potentiometer attenuates the input signals. The second wiper of each potentiometer controls the signal amplitude at the rear set of speakers.

Figure 6. Gain Control

Daisy-Chaining

Figure 5 shows an application daisy-chaining the serial-interfaces of the MAX5408-MAX5411. A single-write command updates multiple devices from a single digital port in this configuration (see *Digital Serial Interface* section).

Gain Control

Figure 6 shows the application of a gain control. **Note:** Muting the potentiometer creates unpredictable behavior at the output of the op amp, and may seriously degrade the performance of the op amp.

NOTES:
 1. DIMENSIONING & TOLERANCING CONFORM TO ASME Y14.5M-1994.
 2. ALL DIMENSIONS ARE IN MILLIMETERS. ANGLES ARE IN DEGREES.
 3. N IS THE TOTAL NUMBER OF TERMINALS.
 4. THE TERMINAL #1 IDENTIFIER AND TERMINAL NUMBERING CONVENTION SHALL CONFORM TO JEDEC 95-1 SFF-012. DETAILS OF TERMINAL #1 IDENTIFIER ARE OPTIONAL, BUT MUST BE LOCATED WITHIN THE ZONE INDICATED. THE TERMINAL #1 IDENTIFIER MAY BE EITHER A MOLD OR MARKED FEATURE.
 5. DIMENSION b APPLIES TO METALLIZED TERMINAL AND IS MEASURED BETWEEN 0.25 mm AND 0.30 mm FROM TERMINAL TIP.
 6. ND AND NE REFER TO THE NUMBER OF TERMINALS ON EACH D AND E SIDE RESPECTIVELY.
 7. DEPOPULATION IS POSSIBLE IN A SYMMETRICAL FASHION.
 8. COPLANARITY APPLIES TO THE EXPOSED HEAT SINK SLUG AS WELL AS THE TERMINALS.
 9. DRAWING CONFORMS TO JEDEC MO220, EXCEPT FOR T2444-1, T2444-3 AND T2444-4.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
