

TPS715xx-Q1 50-mA, 24-V, 3.2- μ A Supply Current Low-Dropout Linear Regulators in SC70 Package

1 Features

- Qualified for Automotive Applications
 - Automotive Grade 1 (Q-temperature Range)
 - Device HBM ESD Classification Level H2
 - Device CDM ESD Classification Level C4B
- 24-V Maximum Input Voltage
- Low 3.2- μ A Quiescent Current at 50 mA
- Stable With Any Capacitor ($> 0.47 \mu\text{F}$)
- 50-mA Low-Dropout Regulator
- Available in 2.5 V, 3 V, 3.3 V, 5 V, and Adjustable (1.2 V to 15 V)
- Minimum and Maximum Specified Current Limit
- 5-Pin SC70 and SOT (DCK) Package
- -40°C to 125°C Specified Junction Temperature Range

2 Applications

- Ultra-Low-Power Microcontrollers
- Cellular and Cordless Handsets
- Portable- and Battery-Powered Equipment

3 Description

The TPS715xx-Q1 low-dropout (LDO) voltage regulators offer the benefits of high input voltage, LDO voltage, low-power operation, and miniaturized packaging. The devices, which operate over an input range of 2.5 V to 24 V, are stable with any capacitor ($>0.47 \mu\text{F}$). The LDO voltage and low quiescent current allow operations at extremely low power levels. Therefore, the devices are ideal for powering battery-management ICs. Specifically, since the devices are enabled as soon as the applied voltage reaches the minimum input voltage, the output is quickly available to power continuously operating battery-charging ICs.

The usual PNP pass transistor has been replaced by a PMOS pass element. Because the PMOS pass element behaves as a low-value resistor, the LDO voltage, typically 415 mV at 50 mA of load current, is directly proportional to the load current. The low quiescent current (3.2 μA typical) is stable over the entire range of output load current (0 mA to 50 mA).

Table 1. Device Information⁽¹⁾⁽²⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision G (July 2013) to Revision H	Page
Added <i>ESD Ratings</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i>, <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section.....	1

Changes from Revision F (August 2011) to Revision G	Page
- Added Grade 1 and HBM and CDM classification to features list..... - Changed CDM absolute maximum value from 500 to 750 - Added ESD classifications for HBM and CDM models in <i>ABSOLUTE MAXIMUM RATINGS</i> table..... - Added additional test condition to Output current limit in <i>ELECTRICAL CHARACTERISTICS</i> table, and added V_{IN} value to condition to differentiate conditions	1 3 3 4

5 Pin Configuration and Functions

Pin Functions

PIN			TYPE	DESCRIPTION
NAME	SC70			
	FIXED	ADJ.		
FB		1	Input	Adjustable version only. This terminal is used to set the output voltage.
NC	1		NC	No connection
GND	2	2	GND	Ground
NC	3	3	NC	No connection
IN	4	4	Input	Input supply.
OUT	5	5	Output	Output of the regulator, any output capacitor ≥ 0.47 μF can be used for stability.

6 Specifications

6.1 Absolute Maximum Ratings

over operating temperature range (unless otherwise noted)⁽¹⁾⁽²⁾

	MIN	MAX	UNIT
V_{IN}	−0.3	24	V
V_{OUT}	−0.3	16.5	V
Peak output current	Internally limited		
Continuous total power dissipation	See Thermal Information		
Junction temperature, T_{J}	−40	150	°C
Storage temperature, T_{stg}	−65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values are with respect to network ground terminal.

6.2 ESD Ratings

			VALUE	UNIT
$V_{\text{(ESD)}}$ Electrostatic discharge	Human-body model (HBM), per AEC Q100-002 ⁽¹⁾		±2000	V
	Charged-device model (CDM), per AEC Q100-011	All pins	±500	
		Corner pins (1, 3, 4, and 5)	±750	

- (1) AEC Q100-002 indicates that HBM stressing shall be in accordance with the ANSI/ESDA/JEDEC JS-001 specification.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V_{IN}	Input voltage	2.5	24	V
V_O	Output voltage	1.2	15	V
I_O	Output current		50	mA
C_O	Output capacitor	0.47		μ F
T_J	Operating junction temperature	–40	150	°C

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TPS715xx-Q1	UNIT
		DCK (SC70)	
		5 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	261.4	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	71.9	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	48.5	°C/W
Ψ_{JT}	Junction-to-top characterization parameter	0.9	°C/W
Ψ_{JB}	Junction-to-board characterization parameter	47.7	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	N/A	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

6.5 Electrical Characteristics

over operating junction temperature range ($T_J = -40^{\circ}\text{C}$ to 125°C), $V_{IN} = V_{OUT(NOM)} + 1\text{ V}$, $I_{OUT} = 1\text{ mA}$, $C_{OUT} = 1\text{ }\mu\text{F}$, unless otherwise noted. Typical values are at $T_J = 25^{\circ}\text{C}$.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
V_{IN}	Input voltage ⁽¹⁾	$I_O = 10\text{ mA}$	2.5		24	V
		$I_O = 50\text{ mA}$	3		24	
	V_{OUT} voltage range (TPS71501)		1.2		15	V
	V_{OUT} accuracy ⁽¹⁾ over V_{IN} , I_{OUT} , and T	$V_{IN} + 1\text{ V} \leq V_{IN} \leq 24\text{ V}$, $100\text{ }\mu\text{A} \leq I_{OUT} \leq 50\text{ mA}$	–4%		4%	
I_{GND}	Ground-pin current	$0\text{ mA} \leq I_{OUT} \leq 50\text{ mA}$		3.2	12	μA
$\Delta V_{OUT}/\Delta I_{OUT}$	Load regulation	$I_{OUT} = 100\text{ }\mu\text{A}$ to 50 mA		22		mV
$\Delta V_{OUT}/\Delta V_{IN}$	Output voltage line regulation ⁽¹⁾	$V_{OUT} + 1\text{ V} < V_{IN} \leq 24\text{ V}$		20	60	mV
V_n	Output noise voltage	BW = 200 Hz to 100 kHz, $C_{OUT} = 10\text{ }\mu\text{F}$, $I_{OUT} = 50\text{ mA}$		575		μVrms
I_{CL}	Output current limit	$V_{OUT} = 0\text{ V}$, $V_{IN} \geq 3.5\text{ V}$	125		750	mA
		$V_{OUT} = 0\text{ V}$, $V_{IN} < 3.5\text{ V}$	90		750	
PSRR	Power-supply ripple rejection	$f = 100\text{ kHz}$, $C_{OUT} = 10\text{ }\mu\text{F}$		60		dB
V_{DO}	Dropout voltage, $V_{IN} = V_{OUT(NOM)} - 1\text{ V}$	$I_{OUT} = 50\text{ mA}$		415	750	mV

(1) Minimum $V_{IN} = V_{OUT} + V_{DO}$ or the value shown for input voltage in this table, whichever is greater.

7 Detailed Description

7.1 Overview

The TPS715xx-Q1 series of low-dropout (LDO) voltage regulators offer the benefits of high input voltage, LDO voltage, low-power operation, and miniaturized packaging. The devices, which operate over an input range of 2.5 V to 24 V, are stable with any capacitor ($> 0.47 \mu\text{F}$). The LDO voltage and low quiescent current allow operations at extremely low power levels. Therefore, the devices are ideal for powering battery-management ICs. Specifically, since the devices are enabled as soon as the applied voltage reaches the minimum input voltage, the output is quickly available to power continuously operating battery-charging ICs.

7.2 Functional Block Diagram

Figure 13. Functional Block Diagram—Adjustable Version

Figure 14. Functional Block Diagram—Fixed Version

7.3 Feature Description

7.3.1 Regulator Protection

The TPS715xx-Q1 PMOS-pass transistor has a built-in back diode that conducts reverse current when the input voltage drops below the output voltage (for example, during power down). Current is conducted from the output to the input and is not internally limited. If extended reverse voltage operation is anticipated, external limiting might be appropriate.

Feature Description (continued)

7.3.2 Current Limit

The TPS715xx-Q1 features internal current limiting. During normal operation, the TPS715xx-Q1 limits output current to approximately 500 mA. When current limiting engages, the output voltage scales back linearly until the overcurrent condition ends. Take care not to exceed the power dissipation ratings of the package.

7.3.3 Adjustable Output Voltage

TPS715xx-Q1 provides both fixed output version and adjustable output version. 2.5 V, 3 V, 3.3 V, and 5 V outputs are available for fixed output version. The range for adjustable output is from 1.2 V to 15 V. This can be realized by adjusting the resistor divider on the FB pin.

7.4 Device Functional Modes

Table 2 provides a quick comparison between the normal, dropout, and disabled modes of operation.

Table 2. Device Functional Mode Comparison

OPERATING MODE	PARAMETER	
	V_{IN}	I_{OUT}
Normal	$V_{IN} > V_{OUT(nom)} + V_{DO}$	$I_{OUT} < I_{CL}$
Dropout	$V_{IN} < V_{OUT(nom)} + V_{DO}$	$I_{OUT} < I_{CL}$
Disabled	—	—

7.4.1 Normal Operation

The device regulates to the nominal output voltage under the following conditions:

- The input voltage is greater than the nominal output voltage plus the dropout voltage ($V_{OUT(nom)} + V_{DO}$).
- The output current is less than the current limit ($I_{OUT} < I_{CL}$).
- The device junction temperature is less than 125°C.

7.4.2 Dropout Operation

If the input voltage is lower than the nominal output voltage plus the specified dropout voltage, but all other conditions are met for normal operation, the device operates in dropout mode. In this mode, the output voltage tracks the input voltage. During this mode, the transient performance of the device becomes significantly degraded because the pass device is in the linear region and no longer controls the current through the LDO. Line or load transients in dropout can result in large output-voltage deviations.

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The TPS715xx-Q1 family of LDO regulators has been optimized for ultra-low power applications such as the MSP430 microcontroller. Its ultralow supply current maximizes efficiency at light loads and its high input voltage range makes it suitable for supplies such as unconditioned solar panels.

8.1.1 Programming the TPS71501 Adjustable LDO Regulator

The output voltage of the TPS71501 adjustable regulator is programmed using an external resistor divider as shown in Figure 15. The output voltage is calculated using Equation 1.

$$V_O = V_{ref} \times \left(1 + \frac{R1}{R2}\right)$$

where

- $V_{REF} = 1.205 \text{ V typ}$ (the internal reference voltage)

Resistors R1 and R2 should be chosen for approximately 1.5-μA divider current. Lower value resistors can be used for improved noise performance, but the solution consumes more power. Higher resistor values should be avoided as leakage current into/out of FB across R1/R2 creates an offset voltage that artificially increases/decreases the feedback voltage and thus erroneously decreases/increases V_O . The recommended design procedure is to choose $R2 = 1 \text{ M}\Omega$ to set the divider current at 1.5 μA and then calculate R1 using Equation 2.

$$R1 = \left(\frac{V_O}{V_{ref}} - 1\right) \times R2$$

Figure 15. TPS71501 Adjustable LDO Regulator Programming

8.2 Typical Application

Figure 16. Typical Application Circuit (Fixed Voltage Version)

8.2.1 Design Requirements

For this design example, use the parameters listed in [Table 3](#) as the input parameters.

Table 3. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUES
Input voltage range	4.3-24 V
Input capacitor	0.1 μ F
Output voltage	3.3 V
Output current rating	50 mA
Output capacitor range	0.47 μ F

8.2.2 Detailed Design Procedure

8.2.2.1 External Capacitor Requirements

Although not required, a 0.047- μ F or larger input bypass capacitor, connected between IN and GND and located close to the device, is recommended to improve transient response and noise rejection of the power supply as a whole. A higher-value input capacitor may be necessary if large, fast-rise-time load transients are anticipated and the device is located several inches from the power source.

The TPS715xx-Q1 requires an output capacitor connected between OUT and GND to stabilize the internal control loop. Any capacitor (including ceramic and tantalum) ≥ 0.47 μ F properly stabilizes this loop.

8.2.3 Application Curves

[Figure 17](#) shows the input voltage ramp from 0 to just below 24 V (CH1), the 3.3-V regulated output voltage (CH3), and the 50-mA output current (CH4). The scale on CH4 is 50 mA/div.

[Figure 18](#) shows the load transient waveform of the TPS71533-Q1, output current is switched between 0 mA and 50 mA (CH4). Input voltage is set at 4.3 V (CH1). Output voltage DC (CH3) and output voltage AC (CH2) are also shown in the waveform.

Figure 17. TPS71533-Q1 Power Up and Power Down Waveform

Figure 18. TPS71533-Q1 Load Transient Waveform

9 Power Supply Recommendations

The device is designed to operate from a max 24V input voltage supply. This input supply must be well regulated. If the input supply is located more than a few inches from the TPS715xx-Q1 device, it is recommended to add an μF level bulk capacitor and an nF level ceramic bypass capacitor at the input.

10 Layout

10.1 Layout Guidelines

For the LDO power supply, layout is an important step. If layout is not carefully designed, the regulator could not deliver enough output current because of the thermal limitation. To improve the thermal performance of the device, and maximize the current output at high ambient temperature, it is recommended to spread the ground copper as large as possible. Figure 19 shows an example layout.

10.2 Layout Example

Figure 19. TPS715xx-Q1 Layout Example

10.3 Power Dissipation and Junction Temperature

To ensure reliable operation, worst-case junction temperature should not exceed 125°C. This restriction limits the power dissipation the regulator can handle in any given application. To ensure the junction temperature is within acceptable limits, calculate the maximum allowable dissipation, $P_{D(max)}$, and the actual dissipation, P_D , which must be less than or equal to $P_{D(max)}$.

The maximum-power-dissipation limit is determined using Equation 3.

Power Dissipation and Junction Temperature (continued)

$$P_{D(max)} = \frac{T_{Jmax} - T_A}{R_{\theta JA}}$$

where

- T_{Jmax} = Maximum allowable junction temperature
 - $R_{\theta JA}$ = Thermal resistance junction-to-ambient for the package (see the Dissipation Ratings table)
 - T_A = Ambient temperature
- (3)

The regulator dissipation is calculated using [Equation 4](#).

$$P_D = (V_I - V_O) \times I_O$$
(4)

Power dissipation resulting from quiescent current is negligible.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

 - C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
 - D. Publication IPC-7351 is recommended for alternate designs.
 - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
